4.9	Links	196
5	Indices and tables	197
	Python Module Index	199
	Index	201

aiogram is a pretty simple and fully asynchronous framework for [Telegram Bot API](#) written in Python 3.7 with [asyncio](#) and [aiohttp](#). It helps you to make your bots faster and simpler.

OFFICIAL AIOGRAM RESOURCES

- News: [@aiogram_live](#)
- Community: [@aiogram](#)
- Russian community: [@aiogram_ru](#)
- Pip: [aiogram](#)
- Docs: [ReadTheDocs](#)
- Source: [Github repo](#)
- Issues/Bug tracker: [Github issues tracker](#)
- Test bot: [@aiogram_bot](#)

FEATURES

- Asynchronous
- Awesome
- Makes things faster
- Has FSM
- Can reply into webhook. (In other words *make requests in response to updates*)

CONTRIBUTE

- [Issue Tracker](#)
- [Source Code](#)

CONTENTS

4.1 Installation Guide

4.1.1 Using PIP

```
$ pip install -U aiogram
```

4.1.2 Using Pipenv

```
$ pipenv install aiogram
```

4.1.3 Using AUR

aiogram is also available in Arch User Repository, so you can install this framework on any Arch-based distribution like ArchLinux, Antergos, Manjaro, etc. To do this, use your favorite AUR-helper and install the [python-aiogram](#) package.

4.1.4 From sources

Development versions:

```
$ git clone https://github.com/aiogram/aiogram.git  
$ cd aiogram  
$ python setup.py install
```

Or if you want to install stable version (The same with version form PyPi):

```
$ git clone https://github.com/aiogram/aiogram.git  
$ cd aiogram  
$ git checkout master  
$ python setup.py install
```

4.1.5 Recommendations

You can speedup your bots by following next instructions:

- Use `uvloop` instead of default `asyncio` loop.

uvloop is a fast, drop-in replacement of the built-in `asyncio` event loop. `uvloop` is implemented in Cython and uses `libuv` under the hood.

Installation:

```
$ pip install uvloop
```

- Use `ujson` instead of the default `json` module.

UltraJSON is an ultra fast JSON encoder and decoder written in pure C with bindings for Python 2.5+ and 3.

Installation:

```
$ pip install ujson
```

- Use `aiohttp` speedups

- Use `cchardet` instead of the `chardet` module.

cChardet is a high speed universal character encoding detector.

Installation:

```
$ pip install cchardet
```

- Use `aiodns` for speeding up DNS resolving.

aiodns provides a simple way for doing asynchronous DNS resolutions.

Installation:

```
$ pip install aiodns
```

- Installing speedups altogether.

The following will get you `aiohttp` along with `cchardet`, `aiodns` and `brotlipy` in one bundle.

Installation:

```
$ pip install aiohttp[speedups]
```

In addition, you don't need do anything, *aiogram* automatically starts using that if it is found in your environment.

4.2 Quick start

4.2.1 Simple template

At first you have to import all necessary modules

```
import logging

from aiogram import Bot, Dispatcher, executor, types
```

Then you have to initialize bot and dispatcher instances. Bot token you can get from [@BotFather](#)

```
API_TOKEN = 'BOT TOKEN HERE'

# Configure logging
logging.basicConfig(level=logging.INFO)

# Initialize bot and dispatcher
bot = Bot(token=API_TOKEN)
dp = Dispatcher(bot)
```

Next step: interaction with bots starts with one command. Register your first command handler:

```
@dp.message_handler(commands=['start', 'help'])
async def send_welcome(message: types.Message):
    """
    This handler will be called when user sends `/start` or `/help` command
    """
    await message.reply("Hi!\nI'm EchoBot!\nPowered by aiogram.")
```

If you want to handle all messages in the chat simply add handler without filters:

```
photo,
caption='Cats are here ',
reply_to_message_id=message.message_id,
```

Last step: run long polling.

```
await message.reply_photo(photo, caption='Cats are here ')
```

4.2.2 Summary

```
1 """
2 This is a echo bot.
3 It echoes any incoming text messages.
4 """
5
6 import logging
7
8 from aiogram import Bot, Dispatcher, executor, types
9
10 API_TOKEN = 'BOT TOKEN HERE'
11
```

(continues on next page)

```
12 # Configure logging
13 logging.basicConfig(level=logging.INFO)
14
15 # Initialize bot and dispatcher
16 bot = Bot(token=API_TOKEN)
17 dp = Dispatcher(bot)
18
19
20
21 @dp.message_handler(regexp='(^cat[s]?$|puss)')
22 async def cats(message: types.Message):
23     with open('data/cats.jpg', 'rb') as photo:
24         '''
25         # Old fashioned way:
26         await bot.send_photo(
27             message.chat.id,
28             photo,
29             caption='Cats are here ',
30             reply_to_message_id=message.message_id,
31         )
32         '''
33
34         await message.reply_photo(photo, caption='Cats are here ')
35
36
37 @dp.message_handler()
38 async def echo(message: types.Message):
39     # old style:
40     # await bot.send_message(message.chat.id, message.text)
41
42     await message.answer(message.text)
43
44
45 if __name__ == '__main__':
46     executor.start_polling(dp, skip_updates=True)
```

4.3 Migration FAQ (1.4 -> 2.0)

This update make breaking changes in aiogram API and drop backward capability with previous versions of framework.

From this point aiogram supports only Python 3.7 and newer.

4.3.1 Changelog

- Used contextvars instead of *aiogram.utils.context*;
- Implemented filters factory;
- Implemented new filters mechanism;
- Allowed to customize command prefix in *CommandsFilter*;
- Implemented mechanism of passing results from filters (as dicts) as kwargs in handlers (like fixtures in pytest);
- Implemented states group feature;

- Implemented FSM storage's proxy;
- Changed files uploading mechanism;
- Implemented pipe for uploading files from URL;
- Implemented I18n Middleware;
- Errors handlers now should accept only two arguments (current update and exception);
- Used *aiohttp_socks* instead of *aiosocksy* for Socks4/5 proxy;
- *types.ContentType* was divided to *types.ContentType* and *types.ContentTypes*;
- Allowed to use *rapidjson* instead of *ujson/json*;
- *.current()* method in bot and dispatcher objects was renamed to *get_current()*;

4.3.2 Instructions

Contextvars

Context utility (*aiogram.utils.context*) now is removed due to new features of Python 3.7 and all subclasses of *aiogram.types.base.TelegramObject*, *aiogram.Bot* and *aiogram.Dispatcher* has *.get_current()* and *.set_current()* methods for getting/setting contextual instances of objects.

Example:

```
async def my_handler(message: types.Message):
    bot = Bot.get_current()
    user = types.User.get_current()
    ...
```

Filters

Custom filters

Now *func* keyword argument can't be used for passing filters to the list of filters instead of that you can pass the filters as arguments:

```
@dp.message_handler(lambda message: message.text == 'foo')
@dp.message_handler(types.ChatType.is_private, my_filter)
async def ...
```

(func filter is still available until v2.1)

Filters factory

Also you can bind your own filters for using as keyword arguments:

```
from aiogram.dispatcher.filters import BoundFilter

class MyFilter(BoundFilter):
    key = 'is_admin'

    def __init__(self, is_admin):
```

(continues on next page)

(continued from previous page)

```

        self.is_admin = is_admin

    async def check(self, message: types.Message):
        member = await bot.get_chat_member(message.chat.id, message.from_user.id)
        return member.is_chat_admin()

dp.filters_factory.bind(MyFilter)

@dp.message_handler(is_admin=True)
async def ...

```

Customize commands prefix

Commands prefix can be changed by following one of two available methods:

```

@dp.message_handler(commands=['admin'], commands_prefix='!/')
@dp.message_handler(Command('admin', prefixes='!/'))
async def ...

```

Passing data from filters as keyword arguments to the handlers

You can pass any data from any filter to the handler by returning `dict`. If any key from the received dictionary not in the handler specification the key will be skipped and will be unavailable from the handler

Before (<=v1.4)

```

async def my_filter(message: types.Message):
    # do something here
    message.conf['foo'] = 'foo'
    message.conf['bar'] = 42
    return True

@dp.message_handler(func=my_filter)
async def my_message_handler(message: types.Message):
    bar = message.conf["bar"]
    await message.reply(f'bar = {bar}')

```

Now (v2.0)

```

async def my_filter(message: types.Message):
    # do something here
    return {'foo': 'foo', 'bar': 42}

@dp.message_handler(my_filter)
async def my_message_handler(message: types.Message, bar: int):
    await message.reply(f'bar = {bar}')

```

Other

Filters can also be used as logical expressions:

```
Text(equals='foo') | Text(endswith='Bar') | ~Text(contains='spam')
```

States group

You can use States objects and States groups instead of string names of the states. String values is still also be available.

Writing states group:

```
from aiogram.dispatcher.filters.state import State, StatesGroup

class UserForm(StatesGroup):
    name = State() # Will be represented in storage as 'Form:name'
    age = State() # Will be represented in storage as 'Form:age'
    gender = State() # Will be represented in storage as 'Form:gender'
```

After that you can use states as *UserForm.name* and etc.

FSM storage's proxy

Now *Dispatcher.current_context()* can't be used as context-manager.

Implemented *FSMContext.proxy()* method which returns asynchronous *FSMContextProxy* context manager and can be used for more simply getting data from the storage.

FSMContextProxy load all user-related data on initialization and dump it to the storage when proxy is closing if any part of the data was changed.

Usage:

```
@dp.message_handler(commands=['click'])
async def cmd_start(message: types.Message, state: FSMContext):
    async with state.proxy() as proxy: # proxy = FSMContextProxy(state); await proxy.
    ↪load()
        proxy.setdefault('counter', 0)
        proxy['counter'] += 1
        return await message.reply(f"Counter: {proxy['counter']}")
```

This method is not recommended in high-load solutions in reason named “race-condition”.

File uploading mechanism

Fixed uploading files. Removed *BaseBot.send_file* method. This allowed to send the *thumb* field.

Pipe for uploading files from URL

Known issue when Telegram can not accept sending file as URL. In this case need to download file locally and then send.

In this case now you can send file from URL by using pipe. That means you download and send the file without saving it.

You can open the pipe and use for uploading by calling `types.InputFile.from_file(<URL>)`

Example:

```
URL = 'https://docs.aiogram.dev/en/dev-2.x/_static/logo.png'

@dp.message_handler(commands=['image', 'img'])
async def cmd_image(message: types.Message):
    await bot.send_photo(message.chat.id, types.InputFile.from_url(URL))
```

I18n Middleware

You can internalize your bot by following next steps:

(Code snippets in this example related with `examples/i18n_example.py`)

First usage

1. Extract texts

```
pybabel extract i18n_example.py -o locales/mybot.pot
```

2. Create `*.po` files. For e.g. create `en`, `ru`, `uk` locales.
3. Translate texts
4. Compile translations

```
pybabel compile -d locales -D mybot
```

Updating translations

When you change the code of your bot you need to update `po` & `mo` files:

1. Regenerate pot file:

```
pybabel extract i18n_example.py -o locales/mybot.pot
```

2. Update po files

```
pybabel update -d locales -D mybot -i locales/mybot.pot
```

3. Update your translations
4. Compile `mo` files

```
pybabel compile -d locales -D mybot
```

Error handlers

Previously errors handlers had to have three arguments *dispatcher*, *update* and *exception* now *dispatcher* argument is removed and will no longer be passed to the error handlers.

Content types

Content types helper was divided to *types.ContentType* and *types.ContentTypes*.

In filters you can use *types.ContentTypes* but for comparing content types you must use *types.ContentType* class.

4.4 Telegram

4.4.1 Bot object

Low level API

Subclass of this class used only for splitting network interface from all of API methods.

```
class aiogram.bot.base.BaseBot (token: String, loop: Optional[Union[asyncio.base_events.BaseEventLoop,
asyncio.events.AbstractEventLoop]] = None, connections_limit: Optional[Integer] = None, proxy: Optional[String] = None,
proxy_auth: Optional[aiohttp.helpers.BasicAuth] = None, validate_token: Optional[Boolean] = True, parse_mode: Optional[String] = None, timeout: Optional[Union[Integer, Float,
aiohttp.client.ClientTimeout]] = None)
```

Bases: object

Base class for bot. It's raw bot.

Instructions how to get Bot token is found here: <https://core.telegram.org/bots#3-how-do-i-create-a-bot>

Parameters

- **token** (str) – token from @BotFather
- **loop** (Optional Union asyncio.BaseEventLoop, asyncio.AbstractEventLoop) – event loop
- **connections_limit** (int) – connections limit for aiohttp.ClientSession
- **proxy** (str) – HTTP proxy URL
- **proxy_auth** (Optional aiohttp.BasicAuth) – Authentication information
- **validate_token** (bool) – Validate token.
- **parse_mode** (str) – You can set default parse mode
- **timeout** (typing.Optional[typing.Union[base.Integer, base.Float, aiohttp.ClientTimeout]]) – Request timeout

Raise when token is invalid throw an *aiogram.utils.exceptions.ValidationError*

request_timeout (*timeout: Union[Integer, Float, aiohttp.client.ClientTimeout]*)

Context manager implements opportunity to change request timeout in current context

Parameters **timeout** (*typing.Optional[typing.Union[base.Integer, base.Float, aiohttp.ClientTimeout]]*) – Request timeout

Returns

async close ()

Close all client sessions

async request (*method: String, data: Optional[Dict] = None, files: Optional[Dict] = None, **kwargs*) → Union[List, Dict, Boolean]

Make an request to Telegram Bot API

<https://core.telegram.org/bots/api#making-requests>

Parameters

- **method** (str) – API method
- **data** (dict) – request parameters
- **files** (dict) – files

Returns result

Return type Union[List, Dict]

Raise aiogram.exceptions.TelegramApiError

async download_file (*file_path: String, destination: Optional[InputFile] = None, timeout: Optional[Integer] = <object object>, chunk_size: Optional[Integer] = 65536, seek: Optional[Boolean] = True*) → Union[_io.BytesIO, _io.FileIO]

Download file by file_path to destination

if You want to automatically create destination (io.BytesIO) use default value of destination and handle result of this method.

Parameters

- **file_path** (str) – file path on telegram server (You can get it from aiogram.types.File)
- **destination** – filename or instance of io.IOBase. For e. g. io.BytesIO
- **timeout** – Integer
- **chunk_size** – Integer
- **seek** – Boolean - go to start of file when downloading is finished.

Returns destination

async send_file (*file_type, method, file, payload*) → Union[Dict, Boolean]

Send file

<https://core.telegram.org/bots/api#inputfile>

Parameters

- **file_type** – field name
- **method** – API method
- **file** – String or io.IOBase
- **payload** – request payload

Returns response

Telegram Bot

This class based on `aiogram.bot.base.BaseBot`

```
class aiogram.bot.bot.Bot (token: String, loop: Optional[Union[asyncio.base_events.BaseEventLoop,
asyncio.events.AbstractEventLoop]] = None, connections_limit: Optional[Integer] = None, proxy: Optional[String] = None, proxy_auth:
Optional[aiohttp.helpers.BasicAuth] = None, validate_token: Optional[Boolean] = True, parse_mode: Optional[String] = None,
timeout: Optional[Union[Integer, Float, aiohttp.client.ClientTimeout]] = None)
```

Bases: `aiogram.bot.base.BaseBot`, `aiogram.utils.mixins.DataMixin`, `aiogram.utils.mixins.ContextInstanceMixin`

Base bot class

Instructions how to get Bot token is found here: <https://core.telegram.org/bots#3-how-do-i-create-a-bot>

Parameters

- **token** (`str`) – token from @BotFather
- **loop** (Optional Union `asyncio.BaseEventLoop`, `asyncio.AbstractEventLoop`) – event loop
- **connections_limit** (`int`) – connections limit for `aiohttp.ClientSession`
- **proxy** (`str`) – HTTP proxy URL
- **proxy_auth** (Optional `aiohttp.BasicAuth`) – Authentication information
- **validate_token** (`bool`) – Validate token.
- **parse_mode** (`str`) – You can set default parse mode
- **timeout** (`typing.Optional[typing.Union[base.Integer, base.Float, aiohttp.ClientTimeout]]`) – Request timeout

Raise when token is invalid throw an `aiogram.utils.exceptions.ValidationError`

property me

Alias for `self.get_me()` but lazy and with caching.

Returns `aiogram.types.User`

```
async download_file_by_id (file_id: String, destination=None, timeout: Integer = 30,
chunk_size: Integer = 65536, seek: Boolean = True)
```

Download file by `file_id` to destination

if You want to automatically create destination (`io.BytesIO`) use default value of destination and handle result of this method.

Parameters

- **file_id** – `str`
- **destination** – filename or instance of `io.IOBase`. For e. g. `io.BytesIO`
- **timeout** – `int`
- **chunk_size** – `int`
- **seek** – `bool` - go to start of file when downloading is finished

Returns destination

async get_updates (*offset: Optional[Integer] = None, limit: Optional[Integer] = None, timeout: Optional[Integer] = None, allowed_updates: Optional[List[String]] = None*)
→ List[aiogram.types.update.Update]

Use this method to receive incoming updates using long polling (wiki).

Notes 1. This method will not work if an outgoing webhook is set up. 2. In order to avoid getting duplicate updates, recalculate offset after each server response.

Source: <https://core.telegram.org/bots/api#getupdates>

Parameters

- **offset** (typing.Union[base.Integer, None]) – Identifier of the first update to be returned
- **limit** (typing.Union[base.Integer, None]) – Limits the number of updates to be retrieved
- **timeout** (typing.Union[base.Integer, None]) – Timeout in seconds for long polling
- **allowed_updates** (typing.Union[typing.List[base.String], None]) – List the types of updates you want your bot to receive

Returns An Array of Update objects is returned

Return type typing.List[types.Update]

async set_webhook (*url: String, certificate: Optional[InputFile] = None, max_connections: Optional[Integer] = None, allowed_updates: Optional[List[String]] = None*) → Boolean

Use this method to specify a url and receive incoming updates via an outgoing webhook. Whenever there is an update for the bot, we will send an HTTPS POST request to the specified url, containing a JSON-serialized Update. In case of an unsuccessful request, we will give up after a reasonable amount of attempts.

Source: <https://core.telegram.org/bots/api#setwebhook>

Parameters

- **url** (base.String) – HTTPS url to send updates to. Use an empty string to remove webhook integration
- **certificate** (typing.Union[base.InputFile, None]) – Upload your public key certificate so that the root certificate in use can be checked
- **max_connections** (typing.Union[base.Integer, None]) – Maximum allowed number of simultaneous HTTPS connections to the webhook for update delivery, 1-100.
- **allowed_updates** (typing.Union[typing.List[base.String], None]) – List the types of updates you want your bot to receive

Returns Returns true

Return type base.Boolean

async delete_webhook () → Boolean

Use this method to remove webhook integration if you decide to switch back to getUpdates. Returns True on success. Requires no parameters.

Source: <https://core.telegram.org/bots/api#deletewebhook>

Returns Returns True on success

Return type `base.Boolean`

async get_webhook_info () → *aiogram.types.webhook_info.WebhookInfo*

Use this method to get current webhook status. Requires no parameters.

If the bot is using `getUpdates`, will return an object with the `url` field empty.

Source: <https://core.telegram.org/bots/api#getwebhookinfo>

Returns On success, returns a `WebhookInfo` object

Return type `types.WebhookInfo`

async get_me () → *aiogram.types.user.User*

A simple method for testing your bot's auth token. Requires no parameters.

Source: <https://core.telegram.org/bots/api#getme>

Returns Returns basic information about the bot in form of a `User` object

Return type `types.User`

async send_message (*chat_id: Union[Integer, String], text: String, parse_mode: Optional[String] = None, disable_web_page_preview: Optional[Boolean] = None, disable_notification: Optional[Boolean] = None, reply_to_message_id: Optional[Integer] = None, reply_markup: Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardRemove, aiogram.types.force_reply.ForceReply]] = None*) → *aiogram.types.message.Message*

Use this method to send text messages.

Source: <https://core.telegram.org/bots/api#sendmessage>

Parameters

- **chat_id** (`typing.Union[base.Integer, base.String]`) – Unique identifier for the target chat or username of the target channel
- **text** (`base.String`) – Text of the message to be sent
- **parse_mode** (`typing.Union[base.String, None]`) – Send Markdown or HTML, if you want Telegram apps to show bold, italic, fixed-width text or inline URLs in your bot's message.
- **disable_web_page_preview** (`typing.Union[base.Boolean, None]`) – Disables link previews for links in this message
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound
- **reply_to_message_id** (`typing.Union[base.Integer, None]`) – If the message is a reply, ID of the original message
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]`) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user

Returns On success, the sent `Message` is returned

Return type `types.Message`

```
async forward_message (chat_id: Union[Integer, String], from_chat_id: Union[Integer, String],  
message_id: Integer, disable_notification: Optional[Boolean] = None)  
→ aiogram.types.message.Message
```

Use this method to forward messages of any kind.

Source: <https://core.telegram.org/bots/api#forwardmessage>

Parameters

- **chat_id** (`typing.Union[base.Integer, base.String]`) – Unique identifier for the target chat or username of the target channel
- **from_chat_id** (`typing.Union[base.Integer, base.String]`) – Unique identifier for the chat where the original message was sent
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound
- **message_id** (`base.Integer`) – Message identifier in the chat specified in `from_chat_id`

Returns On success, the sent `Message` is returned

Return type `types.Message`

```
async send_photo (chat_id: Union[Integer, String], photo: Union[InputFile, String],  
caption: Optional[String] = None, parse_mode: Optional[String]  
= None, disable_notification: Optional[Boolean] = None, re-  
ply_to_message_id: Optional[Integer] = None, reply_markup: Op-  
tional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup,  
aiogram.types.reply_keyboard.ReplyKeyboardMarkup,  
aiogram.types.reply_keyboard.ReplyKeyboardRemove,  
aiogram.types.force_reply.ForceReply]] = None) →  
aiogram.types.message.Message
```

Use this method to send photos.

Source: <https://core.telegram.org/bots/api#sendphoto>

Parameters

- **chat_id** (`typing.Union[base.Integer, base.String]`) – Unique identifier for the target chat or username of the target channel
- **photo** (`typing.Union[base.InputFile, base.String]`) – Photo to send
- **caption** (`typing.Union[base.String, None]`) – Photo caption (may also be used when resending photos by `file_id`), 0-1024 characters
- **parse_mode** (`typing.Union[base.String, None]`) – Send Markdown or HTML, if you want Telegram apps to show bold, italic, fixed-width text or inline URLs in your bot's message.
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound
- **reply_to_message_id** (`typing.Union[base.Integer, None]`) – If the message is a reply, ID of the original message
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]`) – Additional interface options. A JSON-serialized

object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user

Returns On success, the sent Message is returned

Return type `types.Message`

```
async send_audio (chat_id: Union[Integer, String], audio: Union[InputFile, String], caption: Optional[String] = None, parse_mode: Optional[String] = None, duration: Optional[Integer] = None, performer: Optional[String] = None, title: Optional[String] = None, thumb: Optional[Union[InputFile, String]] = None, disable_notification: Optional[Boolean] = None, reply_to_message_id: Optional[Integer] = None, reply_markup: Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardRemove, aiogram.types.force_reply.ForceReply]] = None) → aiogram.types.message.Message
```

Use this method to send audio files, if you want Telegram clients to display them in the music player. Your audio must be in the .mp3 format.

For sending voice messages, use the `sendVoice` method instead.

Source: <https://core.telegram.org/bots/api#sendaudio>

Parameters

- **chat_id** (`typing.Union[base.Integer, base.String]`) – Unique identifier for the target chat or username of the target channel
- **audio** (`typing.Union[base.InputFile, base.String]`) – Audio file to send
- **caption** (`typing.Union[base.String, None]`) – Audio caption, 0-1024 characters
- **parse_mode** (`typing.Union[base.String, None]`) – Send Markdown or HTML, if you want Telegram apps to show bold, italic, fixed-width text or inline URLs in your bot's message.
- **duration** (`typing.Union[base.Integer, None]`) – Duration of the audio in seconds
- **performer** (`typing.Union[base.String, None]`) – Performer
- **title** (`typing.Union[base.String, None]`) – Track name
- **thumb** (`typing.Union[base.InputFile, base.String, None]`) – Thumbnail of the file sent
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound
- **reply_to_message_id** (`typing.Union[base.Integer, None]`) – If the message is a reply, ID of the original message
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]`) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user

Returns On success, the sent Message is returned

Return type `types.Message`

```
async send_document (chat_id: Union[Integer, String], document: Union[InputFile, String], thumb: Optional[Union[InputFile, String]] = None, caption: Optional[String] = None, parse_mode: Optional[String] = None, disable_notification: Optional[Boolean] = None, reply_to_message_id: Optional[Integer] = None, reply_markup: Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardRemove, aiogram.types.force_reply.ForceReply]] = None) → aiogram.types.message.Message
```

Use this method to send general files.

Bots can currently send files of any type of up to 50 MB in size, this limit may be changed in the future.

Source: <https://core.telegram.org/bots/api#senddocument>

Parameters

- **chat_id** (`typing.Union[base.Integer, base.String]`) – Unique identifier for the target chat or username of the target channel
- **document** (`typing.Union[base.InputFile, base.String]`) – File to send
- **thumb** (`typing.Union[base.InputFile, base.String, None]`) – Thumbnail of the file sent
- **caption** (`typing.Union[base.String, None]`) – Document caption (may also be used when resending documents by `file_id`), 0-1024 characters
- **parse_mode** (`typing.Union[base.String, None]`) – Send Markdown or HTML, if you want Telegram apps to show bold, italic, fixed-width text or inline URLs in your bot's message.
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound
- **reply_to_message_id** (`typing.Union[base.Integer, None]`) – If the message is a reply, ID of the original message
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply], None`) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user

Returns On success, the sent Message is returned

Return type `types.Message`

```
async send_video (chat_id: Union[Integer, String], video: Union[InputFile, String], duration: Optional[Integer] = None, width: Optional[Integer] = None, height: Optional[Integer] = None, thumb: Optional[Union[InputFile, String]] = None, caption: Optional[String] = None, parse_mode: Optional[String] = None, supports_streaming: Optional[Boolean] = None, disable_notification: Optional[Boolean] = None, reply_to_message_id: Optional[Integer] = None, reply_markup: Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardRemove, aiogram.types.force_reply.ForceReply]] = None) → aiogram.types.message.Message
```

Use this method to send video files, Telegram clients support mp4 videos (other formats may be sent as Document).

Source: <https://core.telegram.org/bots/api#sendvideo>

Parameters

- **chat_id** (typing.Union[base.Integer, base.String]) – Unique identifier for the target chat or username of the target channel
- **video** (typing.Union[base.InputFile, base.String]) – Video to send
- **duration** (typing.Union[base.Integer, None]) – Duration of sent video in seconds
- **width** (typing.Union[base.Integer, None]) – Video width
- **height** (typing.Union[base.Integer, None]) – Video height
- **thumb** (typing.Union[base.InputFile, base.String, None]) – Thumbnail of the file sent
- **caption** (typing.Union[base.String, None]) – Video caption (may also be used when resending videos by file_id), 0-1024 characters
- **parse_mode** (typing.Union[base.String, None]) – Send Markdown or HTML, if you want Telegram apps to show bold, italic, fixed-width text or inline URLs in your bot's message.
- **supports_streaming** (typing.Union[base.Boolean, None]) – Pass True, if the uploaded video is suitable for streaming
- **disable_notification** (typing.Union[base.Boolean, None]) – Sends the message silently. Users will receive a notification with no sound
- **reply_to_message_id** (typing.Union[base.Integer, None]) – If the message is a reply, ID of the original message
- **reply_markup** (typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user

Returns On success, the sent Message is returned

Return type types.Message

```
async send_animation (chat_id: Union[Integer, String], animation: Union[InputFile, String],
                        duration: Optional[Integer] = None, width: Optional[Integer] = None,
                        height: Optional[Integer] = None, thumb: Optional[Union[InputFile,
                        String]] = None, caption: Optional[String] = None, parse_mode: Op-
                        tional[String] = None, disable_notification: Optional[Boolean] = None,
                        reply_to_message_id: Optional[Integer] = None, reply_markup: Op-
                        tional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup,
                        aiogram.types.reply_keyboard.ReplyKeyboardMarkup,
                        aiogram.types.reply_keyboard.ReplyKeyboardRemove,
                        aiogram.types.force_reply.ForceReply]] = None) →
                        aiogram.types.message.Message
```

Use this method to send animation files (GIF or H.264/MPEG-4 AVC video without sound).

On success, the sent Message is returned. Bots can currently send animation files of up to 50 MB in size, this limit may be changed in the future.

Source <https://core.telegram.org/bots/api#sendanimation>

Parameters

- **chat_id** (typing.Union[base.Integer, base.String]) – Unique identifier for the target chat or username of the target channel (in the format @channelusername)
- **animation** (typing.Union[base.InputFile, base.String]) – Animation to send. Pass a file_id as String to send an animation that exists on the Telegram servers (recommended), pass an HTTP URL as a String for Telegram to get an animation from the Internet, or upload a new animation using multipart/form-data
- **duration** (typing.Union[base.Integer, None]) – Duration of sent animation in seconds
- **width** (typing.Union[base.Integer, None]) – Animation width
- **height** (typing.Union[base.Integer, None]) – Animation height
- **thumb** (typing.Union[typing.Union[base.InputFile, base.String], None]) – Thumbnail of the file sent. The thumbnail should be in JPEG format and less than 200 kB in size. A thumbnail's width and height should not exceed 90.
- **caption** (typing.Union[base.String, None]) – Animation caption (may also be used when resending animation by file_id), 0-1024 characters
- **parse_mode** (typing.Union[base.String, None]) – Send Markdown or HTML, if you want Telegram apps to show bold, italic, fixed-width text or inline URLs in the media caption
- **disable_notification** (typing.Union[base.Boolean, None]) – Sends the message silently. Users will receive a notification with no sound
- **reply_to_message_id** (typing.Union[base.Integer, None]) – If the message is a reply, ID of the original message
- **reply_markup** (typing.Union[typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply], None]) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user

Returns On success, the sent Message is returned

Return type types.Message

```
async send_voice (chat_id: Union[Integer, String], voice: Union[InputFile, String], caption:
Optional[String] = None, parse_mode: Optional[String] = None, duration:
Optional[Integer] = None, disable_notification: Optional[Boolean]
= None, reply_to_message_id: Optional[Integer] = None, reply_markup:
Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup,
aiogram.types.reply_keyboard.ReplyKeyboardMarkup,
aiogram.types.reply_keyboard.ReplyKeyboardRemove,
aiogram.types.force_reply.ForceReply]] = None) →
aiogram.types.message.Message
```

Use this method to send audio files, if you want Telegram clients to display the file as a playable voice message.

For this to work, your audio must be in an .ogg file encoded with OPUS (other formats may be sent as Audio or Document).

Source: <https://core.telegram.org/bots/api#sendvoice>

Parameters

- **chat_id** (typing.Union[base.Integer, base.String]) – Unique identifier for the target chat or username of the target channel
- **voice** (typing.Union[base.InputFile, base.String]) – Audio file to send
- **caption** (typing.Union[base.String, None]) – Voice message caption, 0-1024 characters
- **parse_mode** (typing.Union[base.String, None]) – Send Markdown or HTML, if you want Telegram apps to show bold, italic, fixed-width text or inline URLs in your bot's message.
- **duration** (typing.Union[base.Integer, None]) – Duration of the voice message in seconds
- **disable_notification** (typing.Union[base.Boolean, None]) – Sends the message silently. Users will receive a notification with no sound
- **reply_to_message_id** (typing.Union[base.Integer, None]) – If the message is a reply, ID of the original message
- **reply_markup** (typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user

Returns On success, the sent Message is returned

Return type types.Message

```
async send_video_note (chat_id: Union[Integer, String], video_note: Union[InputFile,
String], duration: Optional[Integer] = None, length:
Optional[Integer] = None, thumb: Optional[Union[InputFile, String]]
= None, disable_notification: Optional[Boolean] = None, re-
ply_to_message_id: Optional[Integer] = None, reply_markup: Op-
tional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup,
aiogram.types.reply_keyboard.ReplyKeyboardMarkup,
aiogram.types.reply_keyboard.ReplyKeyboardRemove,
aiogram.types.force_reply.ForceReply]] = None) →
aiogram.types.message.Message
```

As of v.4.0, Telegram clients support rounded square mp4 videos of up to 1 minute long. Use this method to send video messages.

Source: <https://core.telegram.org/bots/api#sendvideonote>

Parameters

- **chat_id** (`typing.Union[base.Integer, base.String]`) – Unique identifier for the target chat or username of the target channel
- **video_note** (`typing.Union[base.InputFile, base.String]`) – Video note to send
- **duration** (`typing.Union[base.Integer, None]`) – Duration of sent video in seconds
- **length** (`typing.Union[base.Integer, None]`) – Video width and height
- **thumb** (`typing.Union[base.InputFile, base.String, None]`) – Thumbnail of the file sent
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound
- **reply_to_message_id** (`typing.Union[base.Integer, None]`) – If the message is a reply, ID of the original message
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]`) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user

Returns On success, the sent Message is returned

Return type `types.Message`

```
async send_media_group (chat_id: Union[Integer, String], media: Union[aiogram.types.input_media.MediaGroup, List], disable_notification: Optional[Boolean] = None, reply_to_message_id: Optional[Integer] = None) → List[aiogram.types.message.Message]
```

Use this method to send a group of photos or videos as an album.

Source: <https://core.telegram.org/bots/api#sendmediagroup>

Parameters

- **chat_id** (`typing.Union[base.Integer, base.String]`) – Unique identifier for the target chat or username of the target channel
- **media** (`typing.Union[types.MediaGroup, typing.List]`) – A JSON-serialized array describing photos and videos to be sent
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound
- **reply_to_message_id** (`typing.Union[base.Integer, None]`) – If the message is a reply, ID of the original message

Returns On success, an array of the sent Messages is returned

Return type `typing.List[types.Message]`

```

async send_location (chat_id: Union[Integer, String], latitude: Float, longitude: Float, live_period: Optional[Integer] = None, disable_notification: Optional[Boolean] = None, reply_to_message_id: Optional[Integer] = None, reply_markup: Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardRemove, aiogram.types.force_reply.ForceReply]] = None) → aiogram.types.message.Message

```

Use this method to send point on the map.

Source: <https://core.telegram.org/bots/api#sendlocation>

Parameters

- **chat_id** (`typing.Union[base.Integer, base.String]`) – Unique identifier for the target chat or username of the target channel
- **latitude** (`base.Float`) – Latitude of the location
- **longitude** (`base.Float`) – Longitude of the location
- **live_period** (`typing.Union[base.Integer, None]`) – Period in seconds for which the location will be updated
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound
- **reply_to_message_id** (`typing.Union[base.Integer, None]`) – If the message is a reply, ID of the original message
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]`) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user

Returns On success, the sent Message is returned

Return type `types.Message`

```

async edit_message_live_location (latitude: Float, longitude: Float, chat_id: Optional[Union[Integer, String]] = None, message_id: Optional[Integer] = None, inline_message_id: Optional[String] = None, reply_markup: Optional[aiogram.types.inline_keyboard.InlineKeyboardMarkup] = None) → aiogram.types.message.Message

```

Use this method to edit live location messages sent by the bot or via the bot (for inline bots). A location can be edited until its `live_period` expires or editing is explicitly disabled by a call to `stopMessageLiveLocation`.

Source: <https://core.telegram.org/bots/api#editmessagelivelocation>

Parameters

- **chat_id** (`typing.Union[base.Integer, base.String, None]`) – Required if `inline_message_id` is not specified
- **message_id** (`typing.Union[base.Integer, None]`) – Required if `inline_message_id` is not specified. Identifier of the sent message
- **inline_message_id** (`typing.Union[base.String, None]`) – Required if `chat_id` and `message_id` are not specified. Identifier of the inline message

- **latitude** (`base.Float`) – Latitude of new location
- **longitude** (`base.Float`) – Longitude of new location
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, None]`) – A JSON-serialized object for a new inline keyboard

Returns On success, if the edited message was sent by the bot, the edited `Message` is returned, otherwise `True` is returned.

Return type `typing.Union[types.Message, base.Boolean]`

async stop_message_live_location (*chat_id: Optional[Union[Integer, String]] = None, message_id: Optional[Integer] = None, inline_message_id: Optional[String] = None, reply_markup: Optional[aiogram.types.inline_keyboard.InlineKeyboardMarkup] = None*) → *aiogram.types.message.Message*

Use this method to stop updating a live location message sent by the bot or via the bot (for inline bots) before `live_period` expires.

Source: <https://core.telegram.org/bots/api#stopmessagelivelocation>

Parameters

- **chat_id** (`typing.Union[base.Integer, base.String, None]`) – Required if `inline_message_id` is not specified
- **message_id** (`typing.Union[base.Integer, None]`) – Required if `inline_message_id` is not specified. Identifier of the sent message
- **inline_message_id** (`typing.Union[base.String, None]`) – Required if `chat_id` and `message_id` are not specified. Identifier of the inline message
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, None]`) – A JSON-serialized object for a new inline keyboard

Returns On success, if the message was sent by the bot, the sent `Message` is returned, otherwise `True` is returned.

Return type `typing.Union[types.Message, base.Boolean]`

async send_venue (*chat_id: Union[Integer, String], latitude: Float, longitude: Float, title: String, address: String, foursquare_id: Optional[String] = None, foursquare_type: Optional[String] = None, disable_notification: Optional[Boolean] = None, reply_to_message_id: Optional[Integer] = None, reply_markup: Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardRemove, aiogram.types.force_reply.ForceReply]] = None*) → *aiogram.types.message.Message*

Use this method to send information about a venue.

Source: <https://core.telegram.org/bots/api#sendvenue>

Parameters

- **chat_id** (`typing.Union[base.Integer, base.String]`) – Unique identifier for the target chat or username of the target channel
- **latitude** (`base.Float`) – Latitude of the venue
- **longitude** (`base.Float`) – Longitude of the venue
- **title** (`base.String`) – Name of the venue

- **address** (`base.String`) – Address of the venue
- **foursquare_id** (`typing.Union[base.String, None]`) – Foursquare identifier of the venue
- **foursquare_type** (`typing.Union[base.String, None]`) – Foursquare type of the venue, if known
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound
- **reply_to_message_id** (`typing.Union[base.Integer, None]`) – If the message is a reply, ID of the original message
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]`) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user

Returns On success, the sent `Message` is returned

Return type `types.Message`

```
async send_contact (chat_id: Union[Integer, String], phone_number: String, first_name: String, last_name: Optional[String] = None, vcard: Optional[String] = None, disable_notification: Optional[Boolean] = None, reply_to_message_id: Optional[Integer] = None, reply_markup: Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardRemove, aiogram.types.force_reply.ForceReply]] = None) → aiogram.types.message.Message
```

Use this method to send phone contacts.

Source: <https://core.telegram.org/bots/api#sendcontact>

Parameters

- **chat_id** (`typing.Union[base.Integer, base.String]`) – Unique identifier for the target chat or username of the target channel
- **phone_number** (`base.String`) – Contact’s phone number
- **first_name** (`base.String`) – Contact’s first name
- **last_name** (`typing.Union[base.String, None]`) – Contact’s last name
- **vcard** (`typing.Union[base.String, None]`) – vcard
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound
- **reply_to_message_id** (`typing.Union[base.Integer, None]`) – If the message is a reply, ID of the original message
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]`) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user

Returns On success, the sent `Message` is returned

Return type `types.Message`

```
async send_poll(chat_id: Union[Integer, String], question: String, options: List[String],
                 is_anonymous: Optional[Boolean] = None, type: Optional[String]
                 = None, allows_multiple_answers: Optional[Boolean] = None, correct_option_id: Optional[Integer] = None, explanation: Optional[String]
                 = None, explanation_parse_mode: Optional[String] = None, open_period:
                 Optional[Integer] = None, close_date: Optional[Union[Integer, date-
                 time.datetime, datetime.timedelta]] = None, is_closed: Optional[Boolean]
                 = None, disable_notification: Optional[Boolean] = None, reply_to_message_id:
                 Optional[Integer] = None, reply_markup: Op-
                 tional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup,
                 aiogram.types.reply_keyboard.ReplyKeyboardMarkup,
                 aiogram.types.reply_keyboard.ReplyKeyboardRemove,
                 aiogram.types.force_reply.ForceReply]] = None) →
                 aiogram.types.message.Message
```

Use this method to send a native poll. A native poll can't be sent to a private chat. On success, the sent Message is returned.

Parameters

- **chat_id** (`typing.Union[base.Integer, base.String]`) – Unique identifier for the target chat or username of the target channel (in the format @channelusername). A native poll can't be sent to a private chat.
- **question** (`base.String`) – Poll question, 1-255 characters
- **options** (`typing.List[base.String]`) – List of answer options, 2-10 strings 1-100 characters each
- **is_anonymous** (`typing.Optional[base.Boolean]`) – True, if the poll needs to be anonymous, defaults to True
- **type** (`typing.Optional[base.String]`) – Poll type, “quiz” or “regular”, defaults to “regular”
- **allows_multiple_answers** (`typing.Optional[base.Boolean]`) – True, if the poll allows multiple answers, ignored for polls in quiz mode, defaults to False
- **correct_option_id** (`typing.Optional[base.Integer]`) – 0-based identifier of the correct answer option, required for polls in quiz mode
- **explanation** (`typing.Optional[base.String]`) – Text that is shown when a user chooses an incorrect answer or taps on the lamp icon in a quiz-style poll, 0-200 characters with at most 2 line feeds after entities parsing
- **explanation_parse_mode** (`typing.Optional[base.String]`) – Mode for parsing entities in the explanation. See formatting options for more details.
- **open_period** (`typing.Union[base.Integer, None]`) – Amount of time in seconds the poll will be active after creation, 5-600. Can't be used together with `close_date`.
- **close_date** (`typing.Union[base.Integer, datetime.datetime, datetime.timedelta, None]`) – Point in time (Unix timestamp) when the poll will be automatically closed. Must be at least 5 and no more than 600 seconds in the future. Can't be used together with `open_period`.
- **is_closed** (`typing.Optional[base.Boolean]`) – Pass True, if the poll needs to be immediately closed

- **disable_notification** (`typing.Optional[Boolean]`) – Sends the message silently. Users will receive a notification with no sound.
- **reply_to_message_id** (`typing.Optional[Integer]`) – If the message is a reply, ID of the original message
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]`) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user

Returns On success, the sent Message is returned

Return type `types.Message`

```
async send_dice (chat_id: Union[Integer, String], disable_notification: Optional[Boolean] = None, emoji: Optional[String] = None, reply_to_message_id: Optional[Integer] = None, reply_markup: Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardRemove, aiogram.types.force_reply.ForceReply]] = None) → aiogram.types.message.Message
```

Use this method to send a dice, which will have a random value from 1 to 6. On success, the sent Message is returned. (Yes, we're aware of the "proper" singular of die. But it's awkward, and we decided to help it change. One dice at a time!)

Source: <https://core.telegram.org/bots/api#senddice>

Parameters

- **chat_id** (`typing.Union[base.Integer, base.String]`) – Unique identifier for the target chat or username of the target channel
- **emoji** (`typing.Union[base.String, None]`) – Emoji on which the dice throw animation is based. Currently, must be one of "" or "". Defaults to ""
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound
- **reply_to_message_id** (`typing.Union[base.Integer, None]`) – If the message is a reply, ID of the original message
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]`) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user

Returns On success, the sent Message is returned

Return type `types.Message`

```
async send_chat_action (chat_id: Union[Integer, String], action: String) → Boolean
```

Use this method when you need to tell the user that something is happening on the bot's side. The status is set for 5 seconds or less (when a message arrives from your bot, Telegram clients clear its typing status).

We only recommend using this method when a response from the bot will take a noticeable amount of time to arrive.

Source: <https://core.telegram.org/bots/api#sendchataction>

Parameters

- **chat_id** (`typing.Union[base.Integer, base.String]`) – Unique identifier for the target chat or username of the target channel
- **action** (`base.String`) – Type of action to broadcast

Returns Returns True on success

Return type `base.Boolean`

```
async get_user_profile_photos (user_id: Integer, offset: Optional[Integer] = None, limit: Optional[Integer] = None) → aiogram.types.user_profile_photos.UserProfilePhotos
```

Use this method to get a list of profile pictures for a user. Returns a `UserProfilePhotos` object.

Source: <https://core.telegram.org/bots/api#getuserprofilephotos>

Parameters

- **user_id** (`base.Integer`) – Unique identifier of the target user
- **offset** (`typing.Union[base.Integer, None]`) – Sequential number of the first photo to be returned. By default, all photos are returned
- **limit** (`typing.Union[base.Integer, None]`) – Limits the number of photos to be retrieved. Values between 1—100 are accepted. Defaults to 100

Returns Returns a `UserProfilePhotos` object

Return type `types.UserProfilePhotos`

```
async get_file (file_id: String) → aiogram.types.file.File
```

Use this method to get basic info about a file and prepare it for downloading. For the moment, bots can download files of up to 20MB in size.

Note: This function may not preserve the original file name and MIME type. You should save the file's MIME type and name (if available) when the `File` object is received.

Source: <https://core.telegram.org/bots/api#getfile>

Parameters **file_id** (`base.String`) – File identifier to get info about

Returns On success, a `File` object is returned

Return type `types.File`

```
async kick_chat_member (chat_id: Union[Integer, String], user_id: Integer, until_date: Optional[Union[Integer, datetime.datetime, datetime.timedelta]] = None) → Boolean
```

Use this method to kick a user from a group, a supergroup or a channel. In the case of supergroups and channels, the user will not be able to return to the group on their own using invite links, etc., unless unbanned first.

The bot must be an administrator in the chat for this to work and must have the appropriate admin rights.

Note: In regular groups (non-supergroups), this method will only work if the 'All Members Are Admins' setting is off in the target group. Otherwise members may only be removed by the group's creator or by the member that added them.

Source: <https://core.telegram.org/bots/api#kickchatmember>

Parameters

- **chat_id** (`typing.Union[base.Integer, base.String]`) – Unique identifier for the target group or username of the target supergroup or channel

- **user_id** (`base.Integer`) – Unique identifier of the target user
- **until_date** (`typing.Union[base.Integer, None]`) – Date when the user will be unbanned, unix time

Returns Returns True on success

Return type `base.Boolean`

async unban_chat_member (`chat_id: Union[Integer, String]`, `user_id: Integer`) → `Boolean`

Use this method to unban a previously kicked user in a supergroup or channel. The user will not return to the group or channel automatically, but will be able to join via link, etc.

The bot must be an administrator for this to work.

Source: <https://core.telegram.org/bots/api#unbanchatmember>

Parameters

- **chat_id** (`typing.Union[base.Integer, base.String]`) – Unique identifier for the target group or username of the target supergroup or channel
- **user_id** (`base.Integer`) – Unique identifier of the target user

Returns Returns True on success

Return type `base.Boolean`

async restrict_chat_member (`chat_id: Union[Integer, String]`, `user_id: Integer`, `permissions: Optional[aiogram.types.chat_permissions.ChatPermissions] = None`, `until_date: Optional[Union[Integer, datetime.datetime, datetime.timedelta]] = None`, `can_send_messages: Optional[Boolean] = None`, `can_send_media_messages: Optional[Boolean] = None`, `can_send_other_messages: Optional[Boolean] = None`, `can_add_web_page_previews: Optional[Boolean] = None`) → `Boolean`

Use this method to restrict a user in a supergroup. The bot must be an administrator in the supergroup for this to work and must have the appropriate admin rights. Pass True for all boolean parameters to lift restrictions from a user.

Source: <https://core.telegram.org/bots/api#restrictchatmember>

Parameters

- **chat_id** (`typing.Union[base.Integer, base.String]`) – Unique identifier for the target chat or username of the target supergroup
- **user_id** (`base.Integer`) – Unique identifier of the target user
- **permissions** (`ChatPermissions`) – New user permissions
- **until_date** (`typing.Union[base.Integer, None]`) – Date when restrictions will be lifted for the user, unix time
- **can_send_messages** (`typing.Union[base.Boolean, None]`) – Pass True, if the user can send text messages, contacts, locations and venues
- **can_send_media_messages** (`typing.Union[base.Boolean, None]`) – Pass True, if the user can send audios, documents, photos, videos, video notes and voice notes, implies `can_send_messages`
- **can_send_other_messages** (`typing.Union[base.Boolean, None]`) – Pass True, if the user can send animations, games, stickers and use inline bots, implies `can_send_media_messages`

- **can_add_web_page_previews** (`typing.Union[base.Boolean, None]`) – Pass True, if the user may add web page previews to their messages, implies `can_send_media_messages`

Returns Returns True on success

Return type `base.Boolean`

```
async promote_chat_member (chat_id: Union[Integer, String], user_id: Integer, can_change_info: Optional[Boolean] = None, can_post_messages: Optional[Boolean] = None, can_edit_messages: Optional[Boolean] = None, can_delete_messages: Optional[Boolean] = None, can_invite_users: Optional[Boolean] = None, can_restrict_members: Optional[Boolean] = None, can_pin_messages: Optional[Boolean] = None, can_promote_members: Optional[Boolean] = None) → Boolean
```

Use this method to promote or demote a user in a supergroup or a channel. The bot must be an administrator in the chat for this to work and must have the appropriate admin rights. Pass False for all boolean parameters to demote a user.

Source: <https://core.telegram.org/bots/api#promotechatmember>

Parameters

- **chat_id** (`typing.Union[base.Integer, base.String]`) – Unique identifier for the target chat or username of the target channel
- **user_id** (`base.Integer`) – Unique identifier of the target user
- **can_change_info** (`typing.Union[base.Boolean, None]`) – Pass True, if the administrator can change chat title, photo and other settings
- **can_post_messages** (`typing.Union[base.Boolean, None]`) – Pass True, if the administrator can create channel posts, channels only
- **can_edit_messages** (`typing.Union[base.Boolean, None]`) – Pass True, if the administrator can edit messages of other users, channels only
- **can_delete_messages** (`typing.Union[base.Boolean, None]`) – Pass True, if the administrator can delete messages of other users
- **can_invite_users** (`typing.Union[base.Boolean, None]`) – Pass True, if the administrator can invite new users to the chat
- **can_restrict_members** (`typing.Union[base.Boolean, None]`) – Pass True, if the administrator can restrict, ban or unban chat members
- **can_pin_messages** (`typing.Union[base.Boolean, None]`) – Pass True, if the administrator can pin messages, supergroups only
- **can_promote_members** (`typing.Union[base.Boolean, None]`) – Pass True, if the administrator can add new administrators with a subset of his own privileges or demote administrators that he has promoted, directly or indirectly (promoted by administrators that were appointed by him)

Returns Returns True on success

Return type `base.Boolean`

```
async set_chat_administrator_custom_title (chat_id: Union[Integer, String], user_id: Integer, custom_title: String) → Boolean
```

Use this method to set a custom title for an administrator in a supergroup promoted by the bot.

Returns True on success.

Source: <https://core.telegram.org/bots/api#setchatadministratorcustomtitle>

Parameters

- **chat_id** – Unique identifier for the target chat or username of the target supergroup
- **user_id** – Unique identifier of the target user
- **custom_title** – New custom title for the administrator; 0-16 characters, emoji are not allowed

Returns True on success.

async set_chat_permissions (*chat_id*: Union[Integer, String], *permissions*: aiogram.types.chat_permissions.ChatPermissions) → Boolean

Use this method to set default chat permissions for all members. The bot must be an administrator in the group or a supergroup for this to work and must have the can_restrict_members admin rights.

Returns True on success.

Parameters

- **chat_id** – Unique identifier for the target chat or username of the target supergroup
- **permissions** – New default chat permissions

Returns True on success.

async export_chat_invite_link (*chat_id*: Union[Integer, String]) → String

Use this method to generate a new invite link for a chat; any previously generated link is revoked. The bot must be an administrator in the chat for this to work and must have the appropriate admin rights.

Source: <https://core.telegram.org/bots/api#exportchatinvitelink>

Parameters **chat_id** (typing.Union[base.Integer, base.String]) – Unique identifier for the target chat or username of the target channel

Returns Returns exported invite link as String on success

Return type base.String

async set_chat_photo (*chat_id*: Union[Integer, String], *photo*: InputFile) → Boolean

Use this method to set a new profile photo for the chat. Photos can't be changed for private chats. The bot must be an administrator in the chat for this to work and must have the appropriate admin rights.

Note: In regular groups (non-supergroups), this method will only work if the 'All Members Are Admins' setting is off in the target group.

Source: <https://core.telegram.org/bots/api#setchatphoto>

Parameters

- **chat_id** (typing.Union[base.Integer, base.String]) – Unique identifier for the target chat or username of the target channel
- **photo** (base.InputFile) – New chat photo, uploaded using multipart/form-data

Returns Returns True on success

Return type base.Boolean

async delete_chat_photo (*chat_id*: Union[Integer, String]) → Boolean

Use this method to delete a chat photo. Photos can't be changed for private chats. The bot must be an administrator in the chat for this to work and must have the appropriate admin rights.

Note: In regular groups (non-supergroups), this method will only work if the ‘All Members Are Admins’ setting is off in the target group.

Source: <https://core.telegram.org/bots/api#deletechatphoto>

Parameters `chat_id` (`typing.Union[base.Integer, base.String]`) – Unique identifier for the target chat or username of the target channel

Returns Returns True on success

Return type `base.Boolean`

async set_chat_title (`chat_id: Union[Integer, String], title: String`) → Boolean

Use this method to change the title of a chat. Titles can’t be changed for private chats. The bot must be an administrator in the chat for this to work and must have the appropriate admin rights.

Note: In regular groups (non-supergroups), this method will only work if the ‘All Members Are Admins’ setting is off in the target group.

Source: <https://core.telegram.org/bots/api#setchattitle>

Parameters

- `chat_id` (`typing.Union[base.Integer, base.String]`) – Unique identifier for the target chat or username of the target channel
- `title` (`base.String`) – New chat title, 1-255 characters

Returns Returns True on success

Return type `base.Boolean`

async set_chat_description (`chat_id: Union[Integer, String], description: Optional[String] = None`) → Boolean

Use this method to change the description of a supergroup or a channel. The bot must be an administrator in the chat for this to work and must have the appropriate admin rights.

Source: <https://core.telegram.org/bots/api#setchatdescription>

Parameters

- `chat_id` (`typing.Union[base.Integer, base.String]`) – Unique identifier for the target chat or username of the target channel
- `description` (`typing.Union[base.String, None]`) – New chat description, 0-255 characters

Returns Returns True on success

Return type `base.Boolean`

async pin_chat_message (`chat_id: Union[Integer, String], message_id: Integer, disable_notification: Optional[Boolean] = None`) → Boolean

Use this method to pin a message in a supergroup. The bot must be an administrator in the chat for this to work and must have the appropriate admin rights.

Source: <https://core.telegram.org/bots/api#pinchatmessage>

Parameters

- `chat_id` (`typing.Union[base.Integer, base.String]`) – Unique identifier for the target chat or username of the target supergroup
- `message_id` (`base.Integer`) – Identifier of a message to pin

- **disable_notification** (`typing.Union[base.Boolean, None]`) – Pass True, if it is not necessary to send a notification to all group members about the new pinned message

Returns Returns True on success

Return type `base.Boolean`

async unpin_chat_message (`chat_id: Union[Integer, String]`) → `Boolean`

Use this method to unpin a message in a supergroup chat. The bot must be an administrator in the chat for this to work and must have the appropriate admin rights.

Source: <https://core.telegram.org/bots/api#unpinchatmessage>

Parameters **chat_id** (`typing.Union[base.Integer, base.String]`) – Unique identifier for the target chat or username of the target supergroup

Returns Returns True on success

Return type `base.Boolean`

async leave_chat (`chat_id: Union[Integer, String]`) → `Boolean`

Use this method for your bot to leave a group, supergroup or channel.

Source: <https://core.telegram.org/bots/api#leavechat>

Parameters **chat_id** (`typing.Union[base.Integer, base.String]`) – Unique identifier for the target chat or username of the target supergroup or channel

Returns Returns True on success

Return type `base.Boolean`

async get_chat (`chat_id: Union[Integer, String]`) → `aiogram.types.chat.Chat`

Use this method to get up to date information about the chat (current name of the user for one-on-one conversations, current username of a user, group or channel, etc.).

Source: <https://core.telegram.org/bots/api#getchat>

Parameters **chat_id** (`typing.Union[base.Integer, base.String]`) – Unique identifier for the target chat or username of the target supergroup or channel

Returns Returns a Chat object on success

Return type `types.Chat`

async get_chat_administrators (`chat_id: Union[Integer, String]`) → `List[aiogram.types.chat_member.ChatMember]`

Use this method to get a list of administrators in a chat.

Source: <https://core.telegram.org/bots/api#getchatadministrators>

Parameters **chat_id** (`typing.Union[base.Integer, base.String]`) – Unique identifier for the target chat or username of the target supergroup or channel

Returns On success, returns an Array of ChatMember objects that contains information about all chat administrators except other bots. If the chat is a group or a supergroup and no administrators were appointed, only the creator will be returned.

Return type `typing.List[types.ChatMember]`

async get_chat_members_count (`chat_id: Union[Integer, String]`) → `Integer`

Use this method to get the number of members in a chat.

Source: <https://core.telegram.org/bots/api#getchatmemberscount>

Parameters `chat_id` (`typing.Union[base.Integer, base.String]`) – Unique identifier for the target chat or username of the target supergroup or channel

Returns Returns `Int` on success

Return type `base.Integer`

async get_chat_member (`chat_id: Union[Integer, String]`, `user_id: Integer`) → `aiogram.types.chat_member.ChatMember`

Use this method to get information about a member of a chat.

Source: <https://core.telegram.org/bots/api#getchatmember>

Parameters

- `chat_id` (`typing.Union[base.Integer, base.String]`) – Unique identifier for the target chat or username of the target supergroup or channel
- `user_id` (`base.Integer`) – Unique identifier of the target user

Returns Returns a `ChatMember` object on success

Return type `types.ChatMember`

async set_chat_sticker_set (`chat_id: Union[Integer, String]`, `sticker_set_name: String`) → `Boolean`

Use this method to set a new group sticker set for a supergroup. The bot must be an administrator in the chat for this to work and must have the appropriate admin rights.

Use the field `can_set_sticker_set` optionally returned in `getChat` requests to check if the bot can use this method.

Source: <https://core.telegram.org/bots/api#setchatstickerset>

Parameters

- `chat_id` (`typing.Union[base.Integer, base.String]`) – Unique identifier for the target chat or username of the target supergroup
- `sticker_set_name` (`base.String`) – Name of the sticker set to be set as the group sticker set

Returns Returns `True` on success

Return type `base.Boolean`

async delete_chat_sticker_set (`chat_id: Union[Integer, String]`) → `Boolean`

Use this method to delete a group sticker set from a supergroup. The bot must be an administrator in the chat for this to work and must have the appropriate admin rights.

Use the field `can_set_sticker_set` optionally returned in `getChat` requests to check if the bot can use this method.

Source: <https://core.telegram.org/bots/api#deletechatstickerset>

Parameters `chat_id` (`typing.Union[base.Integer, base.String]`) – Unique identifier for the target chat or username of the target supergroup

Returns Returns `True` on success

Return type `base.Boolean`

async answer_callback_query (`callback_query_id: String`, `text: Optional[String] = None`, `show_alert: Optional[Boolean] = None`, `url: Optional[String] = None`, `cache_time: Optional[Integer] = None`) → `Boolean`

Use this method to send answers to callback queries sent from inline keyboards. The answer will be displayed to the user as a notification at the top of the chat screen or as an alert.

Alternatively, the user can be redirected to the specified Game URL. For this option to work, you must first create a game for your bot via @Botfather and accept the terms. Otherwise, you may use links like `t.me/your_bot?start=XXXX` that open your bot with a parameter.

Source: <https://core.telegram.org/bots/api#answercallbackquery>

Parameters

- **callback_query_id** (`base.String`) – Unique identifier for the query to be answered
- **text** (`typing.Union[base.String, None]`) – Text of the notification. If not specified, nothing will be shown to the user, 0-1024 characters
- **show_alert** (`typing.Union[base.Boolean, None]`) – If true, an alert will be shown by the client instead of a notification at the top of the chat screen. Defaults to false.
- **url** (`typing.Union[base.String, None]`) – URL that will be opened by the user's client
- **cache_time** (`typing.Union[base.Integer, None]`) – The maximum amount of time in seconds that the result of the callback query may be cached client-side.

Returns On success, True is returned

Return type `base.Boolean`

async set_my_commands (*commands: List[aiogram.types.bot_command.BotCommand]*) → `Boolean`

Use this method to change the list of the bot's commands.

Source: <https://core.telegram.org/bots/api#setmycommands>

Parameters **commands** – A JSON-serialized list of bot commands to be set as the list of the bot's commands. At most 100 commands can be specified.

Returns Returns True on success.

Return type `base.Boolean`

async get_my_commands () → `List[aiogram.types.bot_command.BotCommand]`

Use this method to get the current list of the bot's commands.

Source: <https://core.telegram.org/bots/api#getmycommands> :return: Returns Array of BotCommand on success. :rtype: `typing.List[types.BotCommand]`

async edit_message_text (*text: String, chat_id: Optional[Union[Integer, String]] = None, message_id: Optional[Integer] = None, inline_message_id: Optional[String] = None, parse_mode: Optional[String] = None, disable_web_page_preview: Optional[Boolean] = None, reply_markup: Optional[aiogram.types.inline_keyboard.InlineKeyboardMarkup] = None*) → `aiogram.types.message.Message`

Use this method to edit text and game messages sent by the bot or via the bot (for inline bots).

Source: <https://core.telegram.org/bots/api#editmessagetext>

Parameters

- **chat_id** (`typing.Union[base.Integer, base.String, None]`) – Required if `inline_message_id` is not specified Unique identifier for the target chat or username of the target channel
- **message_id** (`typing.Union[base.Integer, None]`) – Required if `inline_message_id` is not specified. Identifier of the sent message

- **inline_message_id** (`typing.Union[base.String, None]`) – Required if `chat_id` and `message_id` are not specified. Identifier of the inline message
- **text** (`base.String`) – New text of the message
- **parse_mode** (`typing.Union[base.String, None]`) – Send Markdown or HTML, if you want Telegram apps to show bold, italic, fixed-width text or inline URLs in your bot’s message.
- **disable_web_page_preview** (`typing.Union[base.Boolean, None]`) – Disables link previews for links in this message
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, None]`) – A JSON-serialized object for an inline keyboard

Returns On success, if edited message is sent by the bot, the edited `Message` is returned, otherwise `True` is returned.

Return type `typing.Union[types.Message, base.Boolean]`

```
async edit_message_caption(chat_id: Optional[Union[Integer, String]] = None, message_id: Optional[Integer] = None, inline_message_id: Optional[String] = None, caption: Optional[String] = None, parse_mode: Optional[String] = None, reply_markup: Optional[aiogram.types.inline_keyboard.InlineKeyboardMarkup] = None) → aiogram.types.message.Message
```

Use this method to edit captions of messages sent by the bot or via the bot (for inline bots).

Source: <https://core.telegram.org/bots/api#editmessagecaption>

Parameters

- **chat_id** (`typing.Union[base.Integer, base.String, None]`) – Required if `inline_message_id` is not specified Unique identifier for the target chat or username of the target channel
- **message_id** (`typing.Union[base.Integer, None]`) – Required if `inline_message_id` is not specified. Identifier of the sent message
- **inline_message_id** (`typing.Union[base.String, None]`) – Required if `chat_id` and `message_id` are not specified. Identifier of the inline message
- **caption** (`typing.Union[base.String, None]`) – New caption of the message
- **parse_mode** (`typing.Union[base.String, None]`) – Send Markdown or HTML, if you want Telegram apps to show bold, italic, fixed-width text or inline URLs in your bot’s message.
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, None]`) – A JSON-serialized object for an inline keyboard

Returns On success, if edited message is sent by the bot, the edited `Message` is returned, otherwise `True` is returned.

Return type `typing.Union[types.Message, base.Boolean]`

```
async edit_message_media(media: aiogram.types.input_media.InputMedia, chat_id: Optional[Union[Integer, String]] = None, message_id: Optional[Integer] = None, inline_message_id: Optional[String] = None, reply_markup: Optional[aiogram.types.inline_keyboard.InlineKeyboardMarkup] = None) → Union[aiogram.types.message.Message, Boolean]
```

Use this method to edit audio, document, photo, or video messages. If a message is a part of a message

album, then it can be edited only to a photo or a video. Otherwise, message type can be changed arbitrarily. When inline message is edited, new file can't be uploaded. Use previously uploaded file via its `file_id` or specify a URL.

On success, if the edited message was sent by the bot, the edited Message is returned, otherwise True is returned.

Source <https://core.telegram.org/bots/api#editmessagemedia>

Parameters

- **chat_id** (`typing.Union[typing.Union[base.Integer, base.String], None]`) – Required if `inline_message_id` is not specified
- **message_id** (`typing.Union[base.Integer, None]`) – Required if `inline_message_id` is not specified. Identifier of the sent message
- **inline_message_id** (`typing.Union[base.String, None]`) – Required if `chat_id` and `message_id` are not specified. Identifier of the inline message
- **media** (`types.InputMedia`) – A JSON-serialized object for a new media content of the message
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, None]`) – A JSON-serialized object for a new inline keyboard

Returns On success, if the edited message was sent by the bot, the edited Message is returned, otherwise True is returned

Return type `typing.Union[types.Message, base.Boolean]`

```
async edit_message_reply_markup(chat_id: Optional[Union[Integer, String]] = None, message_id: Optional[Integer] = None, inline_message_id: Optional[String] = None, reply_markup: Optional[aiogram.types.inline_keyboard.InlineKeyboardMarkup] = None) → aiogram.types.message.Message
```

Use this method to edit only the reply markup of messages sent by the bot or via the bot (for inline bots).

Source: <https://core.telegram.org/bots/api#editmessagereplymarkup>

Parameters

- **chat_id** (`typing.Union[base.Integer, base.String, None]`) – Required if `inline_message_id` is not specified Unique identifier for the target chat or username of the target channel
- **message_id** (`typing.Union[base.Integer, None]`) – Required if `inline_message_id` is not specified. Identifier of the sent message
- **inline_message_id** (`typing.Union[base.String, None]`) – Required if `chat_id` and `message_id` are not specified. Identifier of the inline message
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, None]`) – A JSON-serialized object for an inline keyboard

Returns On success, if edited message is sent by the bot, the edited Message is returned, otherwise True is returned.

Return type `typing.Union[types.Message, base.Boolean]`

```
async stop_poll(chat_id: Union[String, Integer], message_id: Integer, reply_markup: Optional[aiogram.types.inline_keyboard.InlineKeyboardMarkup] = None) → aiogram.types.poll.Poll
```

Use this method to stop a poll which was sent by the bot. On success, the stopped Poll with the final results

is returned.

Parameters

- **chat_id** (`typing.Union[base.String, base.Integer]`) – Unique identifier for the target chat or username of the target channel
- **message_id** (`base.Integer`) – Identifier of the original message with the poll
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, None]`) – A JSON-serialized object for a new message inline keyboard.

Returns On success, the stopped Poll with the final results is returned.

Return type `types.Poll`

async delete_message (*chat_id: Union[Integer, String], message_id: Integer*) → Boolean

Use this method to delete a message, including service messages, with the following limitations: - A message can only be deleted if it was sent less than 48 hours ago. - Bots can delete outgoing messages in private chats, groups, and supergroups. - Bots can delete incoming messages in private chats. - Bots granted `can_post_messages` permissions can delete outgoing messages in channels. - If the bot is an administrator of a group, it can delete any message there. - If the bot has `can_delete_messages` permission in a supergroup or a channel, it can delete any message there.

Source: <https://core.telegram.org/bots/api#deletemessage>

Parameters

- **chat_id** (`typing.Union[base.Integer, base.String]`) – Unique identifier for the target chat or username of the target channel
- **message_id** (`base.Integer`) – Identifier of the message to delete

Returns Returns True on success

Return type `base.Boolean`

async send_sticker (*chat_id: Union[Integer, String], sticker: Union[InputFile, String], disable_notification: Optional[Boolean] = None, reply_to_message_id: Optional[Integer] = None, reply_markup: Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardRemove, aiogram.types.force_reply.ForceReply]] = None*) → *aiogram.types.message.Message*

Use this method to send .webp stickers.

Source: <https://core.telegram.org/bots/api#sendsticker>

Parameters

- **chat_id** (`typing.Union[base.Integer, base.String]`) – Unique identifier for the target chat or username of the target channel
- **sticker** (`typing.Union[base.InputFile, base.String]`) – Sticker to send
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound
- **reply_to_message_id** (`typing.Union[base.Integer, None]`) – If the message is a reply, ID of the original message

- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]`) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user

Returns On success, the sent Message is returned

Return type `types.Message`

async get_sticker_set (*name: String*) → `aiogram.types.sticker_set.StickerSet`

Use this method to get a sticker set.

Source: <https://core.telegram.org/bots/api#getstickerset>

Parameters **name** (`base.String`) – Name of the sticker set

Returns On success, a StickerSet object is returned

Return type `types.StickerSet`

async upload_sticker_file (*user_id: Integer, png_sticker: InputFile*) → `aiogram.types.file.File`

Use this method to upload a .png file with a sticker for later use in `createNewStickerSet` and `addStickerToSet` methods (can be used multiple times).

Source: <https://core.telegram.org/bots/api#uploadstickerfile>

Parameters

- **user_id** (`base.Integer`) – User identifier of sticker file owner
- **png_sticker** (`base.InputFile`) – Png image with the sticker, must be up to 512 kilobytes in size, dimensions must not exceed 512px, and either width or height must be exactly 512px.

Returns Returns the uploaded File on success

Return type `types.File`

async create_new_sticker_set (*user_id: Integer, name: String, title: String, emojis: String, png_sticker: Optional[Union[InputFile, String]] = None, tgs_sticker: Optional[InputFile] = None, contains_masks: Optional[Boolean] = None, mask_position: Optional[aiogram.types.mask_position.MaskPosition] = None*) → `Boolean`

Use this method to create a new sticker set owned by a user. The bot will be able to edit the sticker set thus created. You must use exactly one of the fields `png_sticker` or `tgs_sticker`.

Source: <https://core.telegram.org/bots/api#createnewstickerset>

Parameters

- **user_id** (`base.Integer`) – User identifier of created sticker set owner
- **name** (`base.String`) – Short name of sticker set, to be used in `t.me/addstickers/` URLs (e.g., `animals`). Can contain only english letters, digits and underscores. Must begin with a letter, can't contain consecutive underscores and must end in `"_by_<bot username>"`. `<bot username>` is case insensitive. 1-64 characters.
- **title** (`base.String`) – Sticker set title, 1-64 characters
- **png_sticker** (`typing.Union[base.InputFile, base.String]`) – PNG image with the sticker, must be up to 512 kilobytes in size, dimensions must not exceed 512px, and either width or height must be exactly 512px. Pass a `file_id` as a String to

send a file that already exists on the Telegram servers, pass an HTTP URL as a String for Telegram to get a file from the Internet, or upload a new one using multipart/form-data. More info on <https://core.telegram.org/bots/api#sending-files>

- **tgs_sticker** (`base.InputFile`) – TGS animation with the sticker, uploaded using multipart/form-data. See https://core.telegram.org/animated_stickers#technical-requirements for technical requirements
- **emojis** (`base.String`) – One or more emoji corresponding to the sticker
- **contains_masks** (`typing.Union[base.Boolean, None]`) – Pass True, if a set of mask stickers should be created
- **mask_position** (`typing.Union[types.MaskPosition, None]`) – A JSON-serialized object for position where the mask should be placed on faces

Returns Returns True on success

Return type `base.Boolean`

```
async add_sticker_to_set (user_id: Integer, name: String, emojis: String, png_sticker: Optional[Union[InputFile, String]] = None, tgs_sticker: Optional[InputFile] = None, mask_position: Optional[aiogram.types.mask_position.MaskPosition] = None)  
    → Boolean
```

Use this method to add a new sticker to a set created by the bot. You must use exactly one of the fields `png_sticker` or `tgs_sticker`. Animated stickers can be added to animated sticker sets and only to them. Animated sticker sets can have up to 50 stickers. Static sticker sets can have up to 120 stickers.

Source: <https://core.telegram.org/bots/api#addstickertoset>

Parameters

- **user_id** (`base.Integer`) – User identifier of sticker set owner
- **name** (`base.String`) – Sticker set name
- **png_sticker** (`typing.Union[base.InputFile, base.String]`) – PNG image with the sticker, must be up to 512 kilobytes in size, dimensions must not exceed 512px, and either width or height must be exactly 512px. Pass a `file_id` as a String to send a file that already exists on the Telegram servers, pass an HTTP URL as a String for Telegram to get a file from the Internet, or upload a new one using multipart/form-data. More info on <https://core.telegram.org/bots/api#sending-files>
- **tgs_sticker** (`base.InputFile`) – TGS animation with the sticker, uploaded using multipart/form-data. See https://core.telegram.org/animated_stickers#technical-requirements for technical requirements
- **emojis** (`base.String`) – One or more emoji corresponding to the sticker
- **mask_position** (`typing.Union[types.MaskPosition, None]`) – A JSON-serialized object for position where the mask should be placed on faces

Returns Returns True on success

Return type `base.Boolean`

```
async set_sticker_position_in_set (sticker: String, position: Integer) → Boolean
```

Use this method to move a sticker in a set created by the bot to a specific position.

Source: <https://core.telegram.org/bots/api#setstickerpositioninset>

Parameters

- **sticker** (`base.String`) – File identifier of the sticker

- **position** (`base.Integer`) – New sticker position in the set, zero-based

Returns Returns True on success

Return type `base.Boolean`

async delete_sticker_from_set (*sticker: String*) → Boolean

Use this method to delete a sticker from a set created by the bot.

Source: <https://core.telegram.org/bots/api#deletestickerfromset>

Parameters **sticker** (`base.String`) – File identifier of the sticker

Returns Returns True on success

Return type `base.Boolean`

async set_sticker_set_thumb (*name: String, user_id: Integer, thumb: Optional[Union[InputFile, String]] = None*) → Boolean

Use this method to set the thumbnail of a sticker set. Animated thumbnails can be set for animated sticker sets only.

Source: <https://core.telegram.org/bots/api#setstickersetthumb>

Parameters

- **name** (`base.String`) – Sticker set name
- **user_id** (`base.Integer`) – User identifier of the sticker set owner
- **thumb** (`typing.Union[base.InputFile, base.String]`) – A PNG image with the thumbnail, must be up to 128 kilobytes in size and have width and height exactly 100px, or a TGS animation with the thumbnail up to 32 kilobytes in size; see https://core.telegram.org/animated_stickers#technical-requirements for animated sticker technical requirements. Pass a `file_id` as a `String` to send a file that already exists on the Telegram servers, pass an HTTP URL as a `String` for Telegram to get a file from the Internet, or upload a new one using multipart/form-data. More info on <https://core.telegram.org/bots/api#sending-files>. Animated sticker set thumbnail can't be uploaded via HTTP URL.

Returns Returns True on success

Return type `base.Boolean`

async answer_inline_query (*inline_query_id: String, results: List[aiogram.types.inline_query_result.InlineQueryResult], cache_time: Optional[Integer] = None, is_personal: Optional[Boolean] = None, next_offset: Optional[String] = None, switch_pm_text: Optional[String] = None, switch_pm_parameter: Optional[String] = None*) → Boolean

Use this method to send answers to an inline query. No more than 50 results per query are allowed.

Source: <https://core.telegram.org/bots/api#answerinlinequery>

Parameters

- **inline_query_id** (`base.String`) – Unique identifier for the answered query
- **results** (`typing.List[types.InlineQueryResult]`) – A JSON-serialized array of results for the inline query
- **cache_time** (`typing.Union[base.Integer, None]`) – The maximum amount of time in seconds that the result of the inline query may be cached on the server. Defaults to 300.

- **is_personal** (`typing.Union[base.Boolean, None]`) – Pass True, if results may be cached on the server side only for the user that sent the query. By default, results may be returned to any user who sends the same query
- **next_offset** (`typing.Union[base.String, None]`) – Pass the offset that a client should send in the next query with the same text to receive more results. Pass an empty string if there are no more results or if you don't support pagination. Offset length can't exceed 64 bytes.
- **switch_pm_text** (`typing.Union[base.String, None]`) – If passed, clients will display a button with specified text that switches the user to a private chat with the bot and sends the bot a start message with the parameter `switch_pm_parameter`
- **switch_pm_parameter** (`typing.Union[base.String, None]`) – Deep-linking parameter for the /start message sent to the bot when user presses the switch button. 1-64 characters, only A-Z, a-z, 0-9, _ and - are allowed.

Returns On success, True is returned

Return type `base.Boolean`

async send_invoice (*chat_id: Integer, title: String, description: String, payload: String, provider_token: String, start_parameter: String, currency: String, prices: List[aiogram.types.labeled_price.LabeledPrice], provider_data: Optional[Dict] = None, photo_url: Optional[String] = None, photo_size: Optional[Integer] = None, photo_width: Optional[Integer] = None, photo_height: Optional[Integer] = None, need_name: Optional[Boolean] = None, need_phone_number: Optional[Boolean] = None, need_email: Optional[Boolean] = None, need_shipping_address: Optional[Boolean] = None, send_phone_number_to_provider: Optional[Boolean] = None, send_email_to_provider: Optional[Boolean] = None, is_flexible: Optional[Boolean] = None, disable_notification: Optional[Boolean] = None, reply_to_message_id: Optional[Integer] = None, reply_markup: Optional[aiogram.types.inline_keyboard.InlineKeyboardMarkup] = None*) → *aiogram.types.message.Message*

Use this method to send invoices.

Source: <https://core.telegram.org/bots/api#sendinvoice>

Parameters

- **chat_id** (`base.Integer`) – Unique identifier for the target private chat
- **title** (`base.String`) – Product name, 1-32 characters
- **description** (`base.String`) – Product description, 1-255 characters
- **payload** (`base.String`) – Bot-defined invoice payload, 1-128 bytes This will not be displayed to the user, use for your internal processes.
- **provider_token** (`base.String`) – Payments provider token, obtained via Botfather
- **start_parameter** (`base.String`) – Unique deep-linking parameter that can be used to generate this invoice when used as a start parameter
- **currency** (`base.String`) – Three-letter ISO 4217 currency code, see more on currencies
- **prices** (`typing.List[types.LabeledPrice]`) – Price breakdown, a list of components (e.g. product price, tax, discount, delivery cost, delivery tax, bonus, etc.)

- **provider_data** (`typing.Union[typing.Dict, None]`) – JSON-encoded data about the invoice, which will be shared with the payment provider
- **photo_url** (`typing.Union[base.String, None]`) – URL of the product photo for the invoice
- **photo_size** (`typing.Union[base.Integer, None]`) – Photo size
- **photo_width** (`typing.Union[base.Integer, None]`) – Photo width
- **photo_height** (`typing.Union[base.Integer, None]`) – Photo height
- **need_name** (`typing.Union[base.Boolean, None]`) – Pass True, if you require the user’s full name to complete the order
- **need_phone_number** (`typing.Union[base.Boolean, None]`) – Pass True, if you require the user’s phone number to complete the order
- **need_email** (`typing.Union[base.Boolean, None]`) – Pass True, if you require the user’s email to complete the order
- **need_shipping_address** (`typing.Union[base.Boolean, None]`) – Pass True, if you require the user’s shipping address to complete the order
- **send_phone_number_to_provider** (`typing.Union[base.Boolean, None]`) – Pass True, if user’s phone number should be sent to provider
- **send_email_to_provider** (`typing.Union[base.Boolean, None]`) – Pass True, if user’s email address should be sent to provider
- **is_flexible** (`typing.Union[base.Boolean, None]`) – Pass True, if the final price depends on the shipping method
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound
- **reply_to_message_id** (`typing.Union[base.Integer, None]`) – If the message is a reply, ID of the original message
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, None]`) – A JSON-serialized object for an inline keyboard. If empty, one ‘Pay total price’ button will be shown. If not empty, the first button must be a Pay button.

Returns On success, the sent Message is returned

Return type `types.Message`

async answer_shipping_query (*shipping_query_id: String, ok: Boolean, shipping_options: Optional[List[aiogram.types.shipping_option.ShippingOption]] = None, error_message: Optional[String] = None*) → Boolean

If you sent an invoice requesting a shipping address and the parameter `is_flexible` was specified, the Bot API will send an Update with a `shipping_query` field to the bot.

Source: <https://core.telegram.org/bots/api#answershippingquery>

Parameters

- **shipping_query_id** (`base.String`) – Unique identifier for the query to be answered
- **ok** (`base.Boolean`) – Specify True if delivery to the specified address is possible and False if there are any problems (for example, if delivery to the specified address is not possible)

- **shipping_options** (`typing.Union[typing.List[types.ShippingOption], None]`) – Required if `ok` is `True`. A JSON-serialized array of available shipping options
- **error_message** (`typing.Union[base.String, None]`) – Required if `ok` is `False` Error message in human readable form that explains why it is impossible to complete the order (e.g. “Sorry, delivery to your desired address is unavailable”). Telegram will display this message to the user.

Returns On success, `True` is returned

Return type `base.Boolean`

async answer_pre_checkout_query (*pre_checkout_query_id: String, ok: Boolean, error_message: Optional[String] = None*) → `Boolean`

Once the user has confirmed their payment and shipping details, the Bot API sends the final confirmation in the form of an Update with the field `pre_checkout_query`. Use this method to respond to such pre-checkout queries.

Source: <https://core.telegram.org/bots/api#answerprecheckoutquery>

Parameters

- **pre_checkout_query_id** (`base.String`) – Unique identifier for the query to be answered
- **ok** (`base.Boolean`) – Specify `True` if everything is alright (goods are available, etc.) and the bot is ready to proceed with the order. Use `False` if there are any problems.
- **error_message** (`typing.Union[base.String, None]`) – Required if `ok` is `False` Error message in human readable form that explains the reason for failure to proceed with the checkout (e.g. “Sorry, somebody just bought the last of our amazing black T-shirts while you were busy filling out your payment details. Please choose a different color or garment!”). Telegram will display this message to the user.

Returns On success, `True` is returned

Return type `base.Boolean`

async set_passport_data_errors (*user_id: Integer, errors: List[aiogram.types.passport_element_error.PassportElementError]*) → `Boolean`

Informs a user that some of the Telegram Passport elements they provided contains errors. The user will not be able to re-submit their Passport to you until the errors are fixed (the contents of the field for which you returned the error must change). Returns `True` on success.

Use this if the data submitted by the user doesn’t satisfy the standards your service requires for any reason. For example, if a birthday date seems invalid, a submitted document is blurry, a scan shows evidence of tampering, etc. Supply some details in the error message to make sure the user knows how to correct the issues.

Source <https://core.telegram.org/bots/api#setpassportdataerrors>

Parameters

- **user_id** (`base.Integer`) – User identifier
- **errors** (`typing.List[types.PassportElementError]`) – A JSON-serialized array describing the errors

Returns Returns `True` on success

Return type `base.Boolean`

```
async send_game (chat_id: Integer, game_short_name: String, disable_notification: Optional[Boolean] = None, reply_to_message_id: Optional[Integer] = None, reply_markup: Optional[aiogram.types.inline_keyboard.InlineKeyboardMarkup] = None) → aiogram.types.message.Message
```

Use this method to send a game.

Source: <https://core.telegram.org/bots/api#sendgame>

Parameters

- **chat_id** (`base.Integer`) – Unique identifier for the target chat
- **game_short_name** (`base.String`) – Short name of the game, serves as the unique identifier for the game. Set up your games via Botfather.
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound
- **reply_to_message_id** (`typing.Union[base.Integer, None]`) – If the message is a reply, ID of the original message
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, None]`) – A JSON-serialized object for an inline keyboard. If empty, one ‘Play game_title’ button will be shown. If not empty, the first button must launch the game.

Returns On success, the sent Message is returned

Return type `types.Message`

```
async set_game_score (user_id: Integer, score: Integer, force: Optional[Boolean] = None, disable_edit_message: Optional[Boolean] = None, chat_id: Optional[Integer] = None, message_id: Optional[Integer] = None, inline_message_id: Optional[String] = None) → aiogram.types.message.Message
```

Use this method to set the score of the specified user in a game.

Source: <https://core.telegram.org/bots/api#setgamescore>

Parameters

- **user_id** (`base.Integer`) – User identifier
- **score** (`base.Integer`) – New score, must be non-negative
- **force** (`typing.Union[base.Boolean, None]`) – Pass True, if the high score is allowed to decrease. This can be useful when fixing mistakes or banning cheaters.
- **disable_edit_message** (`typing.Union[base.Boolean, None]`) – Pass True, if the game message should not be automatically edited to include the current scoreboard.
- **chat_id** (`typing.Union[base.Integer, None]`) – Required if `inline_message_id` is not specified. Unique identifier for the target chat.
- **message_id** (`typing.Union[base.Integer, None]`) – Required if `inline_message_id` is not specified. Identifier of the sent message.
- **inline_message_id** (`typing.Union[base.String, None]`) – Required if `chat_id` and `message_id` are not specified. Identifier of the inline message.

Returns On success, if the message was sent by the bot, returns the edited Message, otherwise returns True. Returns an error, if the new score is not greater than the user’s current score in the chat and `force` is False.

Return type `typing.Union[types.Message, base.Boolean]`

```
async get_game_high_scores (user_id: Integer, chat_id: Optional[Integer] = None, message_id: Optional[Integer] = None, inline_message_id: Optional[String] = None) → List[aiogram.types.game_high_score.GameHighScore]
```

Use this method to get data for high score tables.

This method will currently return scores for the target user, plus two of his closest neighbors on each side. Will also return the top three users if the user and his neighbors are not among them. Please note that this behavior is subject to change.

Source: <https://core.telegram.org/bots/api#getgamehighscores>

Parameters

- **user_id** (`base.Integer`) – Target user id
- **chat_id** (`typing.Union[base.Integer, None]`) – Required if `inline_message_id` is not specified. Unique identifier for the target chat
- **message_id** (`typing.Union[base.Integer, None]`) – Required if `inline_message_id` is not specified. Identifier of the sent message
- **inline_message_id** (`typing.Union[base.String, None]`) – Required if `chat_id` and `message_id` are not specified. Identifier of the inline message

Returns Will return the score of the specified user and several of his neighbors in a game On success, returns an Array of `GameHighScore` objects. This method will currently return scores for the target user, plus two of his closest neighbors on each side. Will also return the top three users if the user and his neighbors are not among them.

Return type `typing.List[types.GameHighScore]`

API Helpers

```
aiogram.bot.api.check_token (token: str) → bool  
Validate BOT token
```

Parameters `token` –

Returns

```
aiogram.bot.api.check_result (method_name: str, content_type: str, status_code: int, body: str)  
Checks whether result is a valid API response. A result is considered invalid if: - The server returned an HTTP response code other than 200 - The content of the result is invalid JSON. - The method call was unsuccessful (The JSON 'ok' field equals False)
```

Parameters

- **method_name** – The name of the method called
- **status_code** – status code
- **content_type** – content type of result
- **body** – result body

Returns The result parsed to a JSON dictionary

Raises `ApiException` – if one of the above listed cases is applicable

```
aiogram.bot.api.guess_filename (obj)  
Get file name from object
```

Parameters `obj` –

Returns

`aiogram.bot.api.compose_data` (*params=None, files=None*)
Prepare request data

Parameters

- `params` –
- `files` –

Returns

class `aiogram.bot.api.Methods`

Bases: `aiogram.utils.helper.Helper`

Helper for Telegram API Methods listed on <https://core.telegram.org/bots/api>

List is updated to Bot API 4.9

static `api_url` (*token, method*)

Generate API URL with included token and method name

Parameters

- `token` –
- `method` –

Returns

static `file_url` (*token, path*)

Generate File URL with included token and file path

Parameters

- `token` –
- `path` –

Returns

4.4.2 Telegram data types

Bases

Base TelegramObject

MetaTelegramObject

class `aiogram.types.base.MetaTelegramObject` (*name: str, bases: Tuple[Type], namespace: Dict[str, Any], **kwargs: Any*)

Bases: `type`

Metaclass for telegram objects

TelegramObject

class aiogram.types.base.**TelegramObject** (*conf: Optional[Dict[str, Any]] = None, **kwargs: Any*)

Bases: aiogram.utils.mixins.ContextInstanceMixin

Abstract class for telegram objects

Deserialize object

Parameters

- **conf** –
- **kwargs** –

property props

Get props

Returns dict with props

property props_aliases

Get aliases for props

Returns

property values

Get values

Returns

classmethod **to_object** (*data: Dict[str, Any]*) → T

Deserialize object

Parameters **data** –

Returns

to_python () → Dict[str, Any]

Get object as JSON serializable

Returns

clean () → None

Remove empty values

as_json () → str

Get object as JSON string

Returns JSON

Return type str

iter_keys () → Generator[Any, None, None]

Iterate over keys

Returns

iter_values () → Generator[Any, None, None]

Iterate over values

Returns

Fields

BaseField

```
class aiogram.types.fields.BaseField(*, base=None, default=None, alias=None,
                                       on_change=None)
```

Bases: object

Base field (prop)

Init prop

Parameters

- **base** – class for child element
- **default** – default value
- **alias** – alias name (for e.g. field ‘from’ has to be named ‘from_user’ as ‘from’ is a builtin Python keyword)
- **on_change** – callback will be called when value is changed

get_value (*instance*)

Get value for the current object instance

Parameters *instance* –

Returns

set_value (*instance, value, parent=None*)

Set prop value

Parameters

- **instance** –
- **value** –
- **parent** –

Returns

abstract serialize (*value*)

Serialize value to python

Parameters *value* –

Returns

abstract deserialize (*value, parent=None*)

Deserialize python object value to TelegramObject value

export (*instance*)

Alias for *serialize* but for current Object instance

Parameters *instance* –

Returns

Field

```
class aiogram.types.fields.Field(*base=None, default=None, alias=None,  
                                on_change=None)
```

Bases: *aiogram.types.fields.BaseField*

Simple field

Init prop

Parameters

- **base** – class for child element
- **default** – default value
- **alias** – alias name (for e.g. field ‘from’ has to be named ‘from_user’ as ‘from’ is a builtin Python keyword)
- **on_change** – callback will be called when value is changed

serialize (*value*)

Serialize value to python

Parameters value –

Returns

deserialize (*value, parent=None*)

Deserialize python object value to TelegramObject value

ListField

```
class aiogram.types.fields.ListField(*args, **kwargs)
```

Bases: *aiogram.types.fields.Field*

Field contains list ob objects

Init prop

Parameters

- **base** – class for child element
- **default** – default value
- **alias** – alias name (for e.g. field ‘from’ has to be named ‘from_user’ as ‘from’ is a builtin Python keyword)
- **on_change** – callback will be called when value is changed

serialize (*value*)

Serialize value to python

Parameters value –

Returns

deserialize (*value, parent=None*)

Deserialize python object value to TelegramObject value

ListOfLists

```
class aiogram.types.fields.ListOfLists(*, base=None, default=None, alias=None,
                                       on_change=None)
```

Bases: *aiogram.types.fields.Field*

Init prop

Parameters

- **base** – class for child element
- **default** – default value
- **alias** – alias name (for e.g. field ‘from’ has to be named ‘from_user’ as ‘from’ is a builtin Python keyword)
- **on_change** – callback will be called when value is changed

serialize (*value*)

Serialize value to python

Parameters *value* –

Returns

deserialize (*value*, *parent=None*)

Deserialize python object value to TelegramObject value

DateTimeField

```
class aiogram.types.fields.DateTimeField(*, base=None, default=None, alias=None,
                                           on_change=None)
```

Bases: *aiogram.types.fields.Field*

In this field st_ored datetime

in: unixtime out: datetime

Init prop

Parameters

- **base** – class for child element
- **default** – default value
- **alias** – alias name (for e.g. field ‘from’ has to be named ‘from_user’ as ‘from’ is a builtin Python keyword)
- **on_change** – callback will be called when value is changed

serialize (*value: datetime.datetime*)

Serialize value to python

Parameters *value* –

Returns

deserialize (*value*, *parent=None*)

Deserialize python object value to TelegramObject value

TextField

```
class aiogram.types.fields.TextField(*, prefix=None, suffix=None, default=None, alias=None)
```

Bases: *aiogram.types.fields.Field*

Init prop

Parameters

- **base** – class for child element
- **default** – default value
- **alias** – alias name (for e.g. field ‘from’ has to be named ‘from_user’ as ‘from’ is a builtin Python keyword)
- **on_change** – callback will be called when value is changed

```
serialize (value)
```

Serialize value to python

Parameters value –

Returns

```
deserialize (value, parent=None)
```

Deserialize python object value to TelegramObject value

Mixins

Downloadable

```
class aiogram.types.mixins.Downloadable
```

Bases: object

Mixin for files

```
async download (destination=None, timeout=30, chunk_size=65536, seek=True, make_dirs=True)
```

Download file

Parameters

- **destination** – filename or instance of *io.IOBase*. For e. g. *io.BytesIO*
- **timeout** – Integer
- **chunk_size** – Integer
- **seek** – Boolean - go to start of file when downloading is finished.
- **make_dirs** – Make dirs if not exist

Returns destination

```
async get_file ()
```

Get file information

Returns *aiogram.types.File*

```
async get_url ()
```

Get file url.

Attention!! This method has security vulnerabilities for the reason that result contains bot's *access token* in open form. Use at your own risk!

Returns url

Types

StickerSet

class aiogram.types.sticker_set.**StickerSet** (*conf*: *Optional[Dict[str, Any]] = None*, ***kwargs*: *Any*)

Bases: *aiogram.types.base.TelegramObject*

This object represents a sticker set.

<https://core.telegram.org/bots/api#stickerset>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

EncryptedCredentials

class aiogram.types.encrypted_credentials.**EncryptedCredentials** (*conf*: *Optional[Dict[str, Any]] = None*, ***kwargs*: *Any*)

Bases: *aiogram.types.base.TelegramObject*

Contains data required for decrypting and authenticating EncryptedPassportElement. See the Telegram Passport Documentation for a complete description of the data decryption and authentication processes.

<https://core.telegram.org/bots/api#encryptedcredentials>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

CallbackQuery

class aiogram.types.callback_query.**CallbackQuery** (*conf*: *Optional[Dict[str, Any]] = None*, ***kwargs*: *Any*)

Bases: *aiogram.types.base.TelegramObject*

This object represents an incoming callback query from a callback button in an inline keyboard.

If the button that originated the query was attached to a message sent by the bot, the field `message` will be present.

If the button was attached to a message sent via the bot (in inline mode), the field `inline_message_id` will be present.

Exactly one of the fields `data` or `game_short_name` will be present.

<https://core.telegram.org/bots/api#callbackquery>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

async answer (*text: Optional[String] = None, show_alert: Optional[Boolean] = None, url: Optional[String] = None, cache_time: Optional[Integer] = None*)

Use this method to send answers to callback queries sent from inline keyboards. The answer will be displayed to the user as a notification at the top of the chat screen or as an alert.

Alternatively, the user can be redirected to the specified Game URL. For this option to work, you must first create a game for your bot via @Botfather and accept the terms. Otherwise, you may use links like `t.me/your_bot?start=XXXX` that open your bot with a parameter.

Source: <https://core.telegram.org/bots/api#answercallbackquery>

Parameters

- **text** (`typing.Union[base.String, None]`) – Text of the notification. If not specified, nothing will be shown to the user, 0-200 characters
- **show_alert** (`typing.Union[base.Boolean, None]`) – If true, an alert will be shown by the client instead of a notification at the top of the chat screen. Defaults to false.
- **url** (`typing.Union[base.String, None]`) – URL that will be opened by the user's client.
- **cache_time** (`typing.Union[base.Integer, None]`) – The maximum amount of time in seconds that the result of the callback query may be cached client-side.

Returns On success, True is returned.

Return type `base.Boolean`

SuccessfulPayment

class `aiogram.types.successful_payment.SuccessfulPayment` (*conf: Optional[Dict[str, Any]] = None, **kwargs: Any*)

Bases: `aiogram.types.base.TelegramObject`

This object contains basic information about a successful payment.

<https://core.telegram.org/bots/api#successfulpayment>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

MessageEntity

class aiogram.types.message_entity.**MessageEntity** (*conf: Optional[Dict[str, Any]] = None, **kwargs: Any*)

Bases: *aiogram.types.base.TelegramObject*

This object represents one special entity in a text message. For example, hashtags, usernames, URLs, etc.

<https://core.telegram.org/bots/api#messageentity>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

get_text (*text*)

Get value of entity

Parameters **text** – full text

Returns part of text

parse (***kwargs*)

Get entity value with markup

Parameters

- **text** – original text
- **as_html** – as html?

Returns entity text with markup

MessageEntityType

class aiogram.types.message_entity.**MessageEntityType**

Bases: *aiogram.utils.helper.Helper*

List of entity types

Key MENTION

Key HASHTAG

Key CASHTAG

Key BOT_COMMAND

Key URL

Key EMAIL

Key PHONE_NUMBER

Key BOLD

Key ITALIC

Key CODE

Key PRE

Key UNDERLINE

Key STRIKETHROUGH

Key TEXT_LINK

Key TEXT_MENTION

ShippingQuery

class aiogram.types.shipping_query.**ShippingQuery** (*conf: Optional[Dict[str, Any]] = None, **kwargs: Any*) =

Bases: *aiogram.types.base.TelegramObject*

This object contains information about an incoming shipping query.

<https://core.telegram.org/bots/api#shippingquery>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

PassportData

class aiogram.types.passport_data.**PassportData** (*conf: Optional[Dict[str, Any]] = None, **kwargs: Any*) =

Bases: *aiogram.types.base.TelegramObject*

Contains information about Telegram Passport data shared with the bot by the user.

<https://core.telegram.org/bots/api#passportdata>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

InlineKeyboardMarkup

class aiogram.types.inline_keyboard.**InlineKeyboardMarkup** (*row_width=3, inline_keyboard=None, **kwargs*) =

Bases: *aiogram.types.base.TelegramObject*

This object represents an inline keyboard that appears right next to the message it belongs to.

Note: This will only work in Telegram versions released after 9 April, 2016. Older clients will display unsupported message.

<https://core.telegram.org/bots/api#inlinekeyboardmarkup>

Deserialize object

Parameters

- **conf** –

- **kwargs** –

add (**args*)
Add buttons

Parameters **args** –

Returns self

Return type `types.InlineKeyboardMarkup`

row (**args*)
Add row

Parameters **args** –

Returns self

Return type `types.InlineKeyboardMarkup`

insert (*button*)
Insert button to last row

Parameters **button** –

Returns self

Return type `types.InlineKeyboardMarkup`

InlineKeyboardButton

```
class aiogram.types.inline_keyboard.InlineKeyboardButton (text: String, url: String
= None, login_url: aiogram.types.login_url.LoginUrl
= None, callback_data: String = None,
switch_inline_query: String = None,
switch_inline_query_current_chat: String = None,
callback_game: aiogram.types.callback_game.CallbackGame
= None, pay: Boolean = None, **kwargs)
```

Bases: `aiogram.types.base.TelegramObject`

This object represents one button of an inline keyboard. You must use exactly one of the optional fields.

<https://core.telegram.org/bots/api#inlinekeyboardbutton>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

User

class aiogram.types.user.**User** (*conf: Optional[Dict[str, Any]] = None, **kwargs: Any*)

Bases: *aiogram.types.base.TelegramObject*

This object represents a Telegram user or bot.

<https://core.telegram.org/bots/api#user>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

property full_name

You can get full name of user.

Returns str

property mention

You can get user's username to mention him Full name will be returned if user has no username

Returns str

property locale

Get user's locale

Returns *babel.core.Locale*

Video

class aiogram.types.video.**Video** (*conf: Optional[Dict[str, Any]] = None, **kwargs: Any*)

Bases: *aiogram.types.base.TelegramObject, aiogram.types.mixins.Downloadable*

This object represents a video file.

<https://core.telegram.org/bots/api#video>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

EncryptedPassportElement

class aiogram.types.encrypted_passport_element.**EncryptedPassportElement** (*conf: Optional[Dict[str, Any]] = None, **kwargs: Any*)

Bases: *aiogram.types.base.TelegramObject*

Contains information about documents or other Telegram Passport elements shared with the bot by the user.

<https://core.telegram.org/bots/api#encryptedpassportelement>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

Game

class aiogram.types.game.**Game** (*conf: Optional[Dict[str, Any]] = None, **kwargs: Any*)

Bases: *aiogram.types.base.TelegramObject*

This object represents a game.

Use BotFather to create and edit games, their short names will act as unique identifiers.

<https://core.telegram.org/bots/api#game>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

File

class aiogram.types.file.**File** (*conf: Optional[Dict[str, Any]] = None, **kwargs: Any*)

Bases: *aiogram.types.base.TelegramObject, aiogram.types.mixins.Downloadable*

This object represents a file ready to be downloaded.

The file can be downloaded via the link https://api.telegram.org/file/bot<token>/<file_path>.

It is guaranteed that the link will be valid for at least 1 hour. When the link expires, a new one can be requested by calling `getFile`.

Maximum file size to download is 20 MB

<https://core.telegram.org/bots/api#file>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

LabeledPrice

class aiogram.types.labeled_price.**LabeledPrice** (*label: String, amount: Integer*)

Bases: *aiogram.types.base.TelegramObject*

This object represents a portion of the price for goods or services.

<https://core.telegram.org/bots/api#labeledprice>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

CallbackGame

class aiogram.types.callback_game.**CallbackGame** (*conf: Optional[Dict[str, Any]] = None, **kwargs: Any*)

Bases: *aiogram.types.base.TelegramObject*

A placeholder, currently holds no information. Use BotFather to set up your game.

<https://core.telegram.org/bots/api#callbackgame>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

ReplyKeyboardMarkup

class aiogram.types.reply_keyboard.**ReplyKeyboardMarkup** (*keyboard: Optional[List[List[aiogram.types.reply_keyboard.KeyboardButton]]] = None, resize_keyboard: Boolean = None, one_time_keyboard: Boolean = None, selective: Boolean = None, row_width: Integer = 3*)

Bases: *aiogram.types.base.TelegramObject*

This object represents a custom keyboard with reply options (see Introduction to bots for details and examples).

<https://core.telegram.org/bots/api#replykeyboardmarkup>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

add (**args*)
Add buttons

Parameters `args` –

Returns `self`

Return type `types.ReplyKeyboardMarkup`

row (**args*)
Add row

Parameters `args` –

Returns `self`

Return type `types.ReplyKeyboardMarkup`

insert (*button*)
Insert button to last row

Parameters `button` –

Returns `self`

Return type `types.ReplyKeyboardMarkup`

KeyboardButton

```
class aiogram.types.reply_keyboard.KeyboardButton (text: String, request_contact: Boolean = None, request_location: Boolean = None, request_poll: aiogram.types.reply_keyboard.KeyboardButtonPollType = None, **kwargs)
```

Bases: `aiogram.types.base.TelegramObject`

This object represents one button of the reply keyboard. For simple text buttons `String` can be used instead of this object to specify text of the button. Optional fields `request_contact`, `request_location`, and `request_poll` are mutually exclusive. Note: `request_contact` and `request_location` options will only work in Telegram versions released after 9 April, 2016. Older clients will ignore them. Note: `request_poll` option will only work in Telegram versions released after 23 January, 2020. Older clients will receive unsupported message.

<https://core.telegram.org/bots/api#keyboardbutton>

Deserialize object

Parameters

- `conf` –
- `kwargs` –

ReplyKeyboardRemove

```
class aiogram.types.reply_keyboard.ReplyKeyboardRemove (selective: Boolean = None)  
Bases: aiogram.types.base.TelegramObject
```

Upon receiving a message with this object, Telegram clients will remove the current custom keyboard and display the default letter-keyboard. By default, custom keyboards are displayed until a new keyboard is sent by a bot. An exception is made for one-time keyboards that are hidden immediately after the user presses a button (see `ReplyKeyboardMarkup`).

<https://core.telegram.org/bots/api#replykeyboardremove>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

Chat

class aiogram.types.chat.**Chat** (*conf*: Optional[Dict[str, Any]] = None, ***kwargs*: Any)
Bases: *aiogram.types.base.TelegramObject*

This object represents a chat.

<https://core.telegram.org/bots/api#chat>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

property mention

Get mention if a Chat has a username, or get full name if this is a Private Chat, otherwise None is returned

property shifted_id

Get shifted id of chat, e.g. for private links

For example: -1001122334455 -> 1122334455

async get_url () → String

Use this method to get chat link. Private chat returns user link. Other chat types return either username link (if they are public) or invite link (if they are private). :return: link :rtype: *base.String*

async update_chat ()

User this method to update Chat data

Returns None

async set_photo (photo: aiogram.types.input_file.InputFile) → Boolean

Use this method to set a new profile photo for the chat. Photos can't be changed for private chats. The bot must be an administrator in the chat for this to work and must have the appropriate admin rights.

Note: In regular groups (non-supergroups), this method will only work if the 'All Members Are Admins' setting is off in the target group.

Source: <https://core.telegram.org/bots/api#setchatphoto>

Parameters **photo** (*base.InputFile*) – New chat photo, uploaded using multipart/form-data

Returns Returns True on success.

Return type *base.Boolean*

async delete_photo () → Boolean

Use this method to delete a chat photo. Photos can't be changed for private chats. The bot must be an administrator in the chat for this to work and must have the appropriate admin rights.

Note: In regular groups (non-supergroups), this method will only work if the 'All Members Are Admins' setting is off in the target group.

Source: <https://core.telegram.org/bots/api#deletechatphoto>

Returns Returns True on success.

Return type `base.Boolean`

async set_title (*title: String*) → Boolean

Use this method to change the title of a chat. Titles can't be changed for private chats. The bot must be an administrator in the chat for this to work and must have the appropriate admin rights.

Note: In regular groups (non-supergroups), this method will only work if the 'All Members Are Admins' setting is off in the target group.

Source: <https://core.telegram.org/bots/api#setchattitle>

Parameters **title** (`base.String`) – New chat title, 1-255 characters

Returns Returns True on success.

Return type `base.Boolean`

async set_description (*description: String*) → Boolean

Use this method to change the description of a supergroup or a channel. The bot must be an administrator in the chat for this to work and must have the appropriate admin rights.

Source: <https://core.telegram.org/bots/api#setchatdescription>

Parameters **description** (`typing.Union[base.String, None]`) – New chat description, 0-255 characters

Returns Returns True on success.

Return type `base.Boolean`

async kick (*user_id: Integer, until_date: Optional[Union[Integer, datetime.datetime, datetime.timedelta]] = None*) → Boolean

Use this method to kick a user from a group, a supergroup or a channel. In the case of supergroups and channels, the user will not be able to return to the group on their own using invite links, etc., unless unbanned first.

The bot must be an administrator in the chat for this to work and must have the appropriate admin rights.

Note: In regular groups (non-supergroups), this method will only work if the 'All Members Are Admins' setting is off in the target group. Otherwise members may only be removed by the group's creator or by the member that added them.

Source: <https://core.telegram.org/bots/api#kickchatmember>

Parameters

- **user_id** (`base.Integer`) – Unique identifier of the target user
- **until_date** (`typing.Union[base.Integer, None]`) – Date when the user will be unbanned, unix time.

Returns Returns True on success.

Return type `base.Boolean`

async unban (*user_id: Integer*) → Boolean

Use this method to unban a previously kicked user in a supergroup or channel. The user will not return to the group or channel automatically, but will be able to join via link, etc.

The bot must be an administrator for this to work.

Source: <https://core.telegram.org/bots/api#unbanchatmember>

Parameters **user_id** (`base.Integer`) – Unique identifier of the target user

Returns Returns True on success.

Return type `base.Boolean`

async restrict (*user_id: Integer, permissions: Optional[aiogram.types.chat_permissions.ChatPermissions] = None, until_date: Optional[Union[Integer, datetime.datetime, datetime.timedelta]] = None, can_send_messages: Optional[Boolean] = None, can_send_media_messages: Optional[Boolean] = None, can_send_other_messages: Optional[Boolean] = None, can_add_web_page_previews: Optional[Boolean] = None*) → Boolean

Use this method to restrict a user in a supergroup. The bot must be an administrator in the supergroup for this to work and must have the appropriate admin rights. Pass True for all boolean parameters to lift restrictions from a user.

Source: <https://core.telegram.org/bots/api#restrictchatmember>

Parameters

- **user_id** (`base.Integer`) – Unique identifier of the target user
- **permissions** (`ChatPermissions`) – New user permissions
- **until_date** (`typing.Union[base.Integer, None]`) – Date when restrictions will be lifted for the user, unix time.
- **can_send_messages** (`typing.Union[base.Boolean, None]`) – Pass True, if the user can send text messages, contacts, locations and venues
- **can_send_media_messages** (`typing.Union[base.Boolean, None]`) – Pass True, if the user can send audios, documents, photos, videos, video notes and voice notes, implies `can_send_messages`
- **can_send_other_messages** (`typing.Union[base.Boolean, None]`) – Pass True, if the user can send animations, games, stickers and use inline bots, implies `can_send_media_messages`
- **can_add_web_page_previews** (`typing.Union[base.Boolean, None]`) – Pass True, if the user may add web page previews to their messages, implies `can_send_media_messages`

Returns Returns True on success.

Return type `base.Boolean`

async promote (*user_id: Integer, can_change_info: Optional[Boolean] = None, can_post_messages: Optional[Boolean] = None, can_edit_messages: Optional[Boolean] = None, can_delete_messages: Optional[Boolean] = None, can_invite_users: Optional[Boolean] = None, can_restrict_members: Optional[Boolean] = None, can_pin_messages: Optional[Boolean] = None, can_promote_members: Optional[Boolean] = None*) → Boolean

Use this method to promote or demote a user in a supergroup or a channel. The bot must be an administrator in the chat for this to work and must have the appropriate admin rights. Pass False for all boolean parameters to demote a user.

Source: <https://core.telegram.org/bots/api#promotechatmember>

Parameters

- **user_id** (`base.Integer`) – Unique identifier of the target user
- **can_change_info** (`typing.Union[base.Boolean, None]`) – Pass True, if the administrator can change chat title, photo and other settings

- **can_post_messages** (`typing.Union[base.Boolean, None]`) – Pass True, if the administrator can create channel posts, channels only
- **can_edit_messages** (`typing.Union[base.Boolean, None]`) – Pass True, if the administrator can edit messages of other users, channels only
- **can_delete_messages** (`typing.Union[base.Boolean, None]`) – Pass True, if the administrator can delete messages of other users
- **can_invite_users** (`typing.Union[base.Boolean, None]`) – Pass True, if the administrator can invite new users to the chat
- **can_restrict_members** (`typing.Union[base.Boolean, None]`) – Pass True, if the administrator can restrict, ban or unban chat members
- **can_pin_messages** (`typing.Union[base.Boolean, None]`) – Pass True, if the administrator can pin messages, supergroups only
- **can_promote_members** (`typing.Union[base.Boolean, None]`) – Pass True, if the administrator can add new administrators with a subset of his own privileges or demote administrators that he has promoted, directly or indirectly (promoted by administrators that were appointed by him)

Returns Returns True on success.

Return type `base.Boolean`

async set_permissions (*permissions*: `aiogram.types.chat_permissions.ChatPermissions`) → `Boolean`

Use this method to set default chat permissions for all members. The bot must be an administrator in the group or a supergroup for this to work and must have the `can_restrict_members` admin rights.

Returns True on success.

Parameters **permissions** – New default chat permissions

Returns True on success.

async set_administrator_custom_title (*user_id*: `Integer`, *custom_title*: `String`) → `Boolean`

Use this method to set a custom title for an administrator in a supergroup promoted by the bot.

Returns True on success.

Source: <https://core.telegram.org/bots/api#setchatadministratorcustomtitle>

Parameters

- **user_id** – Unique identifier of the target user
- **custom_title** – New custom title for the administrator; 0-16 characters, emoji are not allowed

Returns True on success.

async pin_message (*message_id*: `Integer`, *disable_notification*: `Boolean = False`) → `Boolean`

Use this method to pin a message in a supergroup. The bot must be an administrator in the chat for this to work and must have the appropriate admin rights.

Source: <https://core.telegram.org/bots/api#pinchatmessage>

Parameters

- **message_id** (`base.Integer`) – Identifier of a message to pin

- **disable_notification** (`typing.Union[base.Boolean, None]`) – Pass True, if it is not necessary to send a notification to all group members about the new pinned message

Returns Returns True on success.

Return type `base.Boolean`

async unpin_message () → Boolean

Use this method to unpin a message in a supergroup chat. The bot must be an administrator in the chat for this to work and must have the appropriate admin rights.

Source: <https://core.telegram.org/bots/api#unpinchatmessage>

Returns Returns True on success.

Return type `base.Boolean`

async leave () → Boolean

Use this method for your bot to leave a group, supergroup or channel.

Source: <https://core.telegram.org/bots/api#leavechat>

Returns Returns True on success.

Return type `base.Boolean`

async get_administrators () → List[*aiogram.types.chat_member.ChatMember*]

Use this method to get a list of administrators in a chat.

Source: <https://core.telegram.org/bots/api#getchatadministrators>

Returns On success, returns an Array of ChatMember objects that contains information about all chat administrators except other bots. If the chat is a group or a supergroup and no administrators were appointed, only the creator will be returned.

Return type `typing.List[types.ChatMember]`

async get_members_count () → Integer

Use this method to get the number of members in a chat.

Source: <https://core.telegram.org/bots/api#getchatmemberscount>

Returns Returns Int on success.

Return type `base.Integer`

async get_member (*user_id: Integer*) → *aiogram.types.chat_member.ChatMember*

Use this method to get information about a member of a chat.

Source: <https://core.telegram.org/bots/api#getchatmember>

Parameters **user_id** (`base.Integer`) – Unique identifier of the target user

Returns Returns a ChatMember object on success.

Return type `types.ChatMember`

async set_sticker_set (*sticker_set_name: String*) → Boolean

Use this method to set a new group sticker set for a supergroup. The bot must be an administrator in the chat for this to work and must have the appropriate admin rights.

Use the field `can_set_sticker_set` optionally returned in `getChat` requests to check if the bot can use this method.

Source: <https://core.telegram.org/bots/api#setchatstickerset>

Parameters `sticker_set_name` (`base.String`) – Name of the sticker set to be set as the group sticker set

Returns Returns True on success

Return type `base.Boolean`

async delete_sticker_set () → `Boolean`

Use this method to delete a group sticker set from a supergroup. The bot must be an administrator in the chat for this to work and must have the appropriate admin rights.

Use the field `can_set_sticker_set` optionally returned in `getChat` requests to check if the bot can use this method.

Source: <https://core.telegram.org/bots/api#deletechatstickerset>

Returns Returns True on success

Return type `base.Boolean`

async do (*action: String*) → `Boolean`

Use this method when you need to tell the user that something is happening on the bot's side. The status is set for 5 seconds or less (when a message arrives from your bot, Telegram clients clear its typing status).

We only recommend using this method when a response from the bot will take a noticeable amount of time to arrive.

Source: <https://core.telegram.org/bots/api#sendchataction>

Parameters `action` (`base.String`) – Type of action to broadcast.

Returns Returns True on success.

Return type `base.Boolean`

async export_invite_link () → `String`

Use this method to export an invite link to a supergroup or a channel. The bot must be an administrator in the chat for this to work and must have the appropriate admin rights.

Source: <https://core.telegram.org/bots/api#exportchatinviolink>

Returns Returns exported invite link as `String` on success.

Return type `base.String`

ChatType

class `aiogram.types.chat.ChatType`

Bases: `aiogram.utils.helper.Helper`

List of chat types

Key `PRIVATE`

Key `GROUP`

Key `SUPER_GROUP`

Key `CHANNEL`

classmethod `is_private` (*obj*) → `bool`

Check chat is private

Parameters `obj` –

Returns

classmethod `is_group` (*obj*) → bool
Check chat is group

Parameters *obj* –

Returns

classmethod `is_super_group` (*obj*) → bool
Check chat is super-group

Parameters *obj* –

Returns

classmethod `is_group_or_super_group` (*obj*) → bool
Check chat is group or super-group

Parameters *obj* –

Returns

classmethod `is_channel` (*obj*) → bool
Check chat is channel

Parameters *obj* –

Returns

ChatActions

class `aiogram.types.chat.ChatActions`
Bases: `aiogram.utils.helper.Helper`

List of chat actions

Key TYPING

Key UPLOAD_PHOTO

Key RECORD_VIDEO

Key UPLOAD_VIDEO

Key RECORD_AUDIO

Key UPLOAD_AUDIO

Key UPLOAD_DOCUMENT

Key FIND_LOCATION

Key RECORD_VIDEO_NOTE

Key UPLOAD_VIDEO_NOTE

classmethod `calc_timeout` (*text*, *timeout=0.8*)
Calculate timeout for text

Parameters

- **text** –
- **timeout** –

Returns

async classmethod typing (*sleep=None*)

Do typing

Parameters **sleep** – sleep timeout

Returns

async classmethod upload_photo (*sleep=None*)

Do upload_photo

Parameters **sleep** – sleep timeout

Returns

async classmethod record_video (*sleep=None*)

Do record video

Parameters **sleep** – sleep timeout

Returns

async classmethod upload_video (*sleep=None*)

Do upload video

Parameters **sleep** – sleep timeout

Returns

async classmethod record_audio (*sleep=None*)

Do record audio

Parameters **sleep** – sleep timeout

Returns

async classmethod upload_audio (*sleep=None*)

Do upload audio

Parameters **sleep** – sleep timeout

Returns

async classmethod upload_document (*sleep=None*)

Do upload document

Parameters **sleep** – sleep timeout

Returns

async classmethod find_location (*sleep=None*)

Do find location

Parameters **sleep** – sleep timeout

Returns

async classmethod record_video_note (*sleep=None*)

Do record video note

Parameters **sleep** – sleep timeout

Returns

async classmethod upload_video_note (*sleep=None*)

Do upload video note

Parameters **sleep** – sleep timeout

Returns

Document

class aiogram.types.document.**Document** (*conf*: *Optional[Dict[str, Any]] = None*, ***kwargs*: *Any*)

Bases: *aiogram.types.base.TelegramObject*, *aiogram.types.mixins.Downloadable*

This object represents a general file (as opposed to photos, voice messages and audio files).

<https://core.telegram.org/bots/api#document>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

Audio

class aiogram.types.audio.**Audio** (*conf*: *Optional[Dict[str, Any]] = None*, ***kwargs*: *Any*)

Bases: *aiogram.types.base.TelegramObject*, *aiogram.types.mixins.Downloadable*

This object represents an audio file to be treated as music by the Telegram clients.

<https://core.telegram.org/bots/api#audio>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

ForceReply

class aiogram.types.force_reply.**ForceReply** (*conf*: *Optional[Dict[str, Any]] = None*, ***kwargs*: *Any*)

Bases: *aiogram.types.base.TelegramObject*

Upon receiving a message with this object, Telegram clients will display a reply interface to the user (act as if the user has selected the bot's message and tapped 'Reply'). This can be extremely useful if you want to create user-friendly step-by-step interfaces without having to sacrifice privacy mode.

Example: A poll bot for groups runs in privacy mode (only receives commands, replies to its messages and mentions). There could be two ways to create a new poll

The last option is definitely more attractive. And if you use ForceReply in your bot's questions, it will receive the user's answers even if it only receives replies, commands and mentions — without any extra work for the user.

<https://core.telegram.org/bots/api#forcereply>

Deserialize object

Parameters

- **conf** –

- **kwargs** –

classmethod create (*selective: Optional[Boolean] = None*)

Create new force reply

Parameters selective –

Returns

PassportElementError

```
class aiogram.types.passport_element_error.PassportElementError (conf: Optional[Dict[str, Any]] = None, **kwargs: Any)
```

Bases: *aiogram.types.base.TelegramObject*

This object represents an error in the Telegram Passport element which was submitted that should be resolved by the user.

<https://core.telegram.org/bots/api#passportelementerror>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

PassportElementErrorDataField

```
class aiogram.types.passport_element_error.PassportElementErrorDataField (source: String, type: String, field_name: String, data_hash: String, message: String)
```

Bases: *aiogram.types.passport_element_error.PassportElementError*

Represents an issue in one of the data fields that was provided by the user. The error is considered resolved when the field's value changes.

<https://core.telegram.org/bots/api#passportelementerrordatafield>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

PassportElementErrorFile

```
class aiogram.types.passport_element_error.PassportElementErrorFile (source:  
    String,  
    type:  
    String,  
    file_hash:  
    String,  
    mes-  
    sage:  
    String)
```

Bases: *aiogram.types.passport_element_error.PassportElementError*

Represents an issue with a document scan. The error is considered resolved when the file with the document scan changes.

<https://core.telegram.org/bots/api#passportelementerrorfile>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

PassportElementErrorFiles

```
class aiogram.types.passport_element_error.PassportElementErrorFiles (source:  
    String,  
    type:  
    String,  
    file_hashes:  
    List[String],  
    mes-  
    sage:  
    String)
```

Bases: *aiogram.types.passport_element_error.PassportElementError*

Represents an issue with a list of scans. The error is considered resolved when the list of files containing the scans changes.

<https://core.telegram.org/bots/api#passportelementerrorfiles>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

PassportElementErrorFrontSide

```
class aiogram.types.passport_element_error.PassportElementErrorFrontSide (source:
    String,
    type:
    String,
    file_hash:
    String,
    mes-
    sage:
    String)
```

Bases: *aiogram.types.passport_element_error.PassportElementError*

Represents an issue with the front side of a document. The error is considered resolved when the file with the front side of the document changes.

<https://core.telegram.org/bots/api#passportelementerrorfrontside>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

PassportElementErrorReverseSide

```
class aiogram.types.passport_element_error.PassportElementErrorReverseSide (source:
    String,
    type:
    String,
    file_hash:
    String,
    mes-
    sage:
    String)
```

Bases: *aiogram.types.passport_element_error.PassportElementError*

Represents an issue with the reverse side of a document. The error is considered resolved when the file with reverse side of the document changes.

<https://core.telegram.org/bots/api#passportelementerrorreverseside>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

PassportElementErrorSelfie

```
class aiogram.types.passport_element_error.PassportElementErrorSelfie (source:  
                                                                    String,  
                                                                    type:  
                                                                    String,  
                                                                    file_hash:  
                                                                    String,  
                                                                    mes-  
                                                                    sage:  
                                                                    String)
```

Bases: *aiogram.types.passport_element_error.PassportElementError*

Represents an issue with the selfie with a document. The error is considered resolved when the file with the selfie changes.

<https://core.telegram.org/bots/api#passportelementerrorselfie>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

ShippingAddress

```
class aiogram.types.shipping_address.ShippingAddress (conf: Optional[Dict[str, Any]]  
                                                       = None, **kwargs: Any)
```

Bases: *aiogram.types.base.TelegramObject*

This object represents a shipping address.

<https://core.telegram.org/bots/api#shippingaddress>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

ResponseParameters

```
class aiogram.types.response_parameters.ResponseParameters (conf: Optional[Dict[str, Any]]  
                                                                = None, **kwargs: Any)
```

Bases: *aiogram.types.base.TelegramObject*

Contains information about why a request was unsuccessful.

<https://core.telegram.org/bots/api#responseparameters>

Deserialize object

Parameters

- **conf** –

- **kwargs** –

OrderInfo

class aiogram.types.order_info.**OrderInfo** (*conf*: *Optional[Dict[str, Any]] = None*, ***kwargs*: *Any*)

Bases: *aiogram.types.base.TelegramObject*

This object represents information about an order.

<https://core.telegram.org/bots/api#orderinfo>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

GameHighScore

class aiogram.types.game_high_score.**GameHighScore** (*conf*: *Optional[Dict[str, Any]] = None*, ***kwargs*: *Any*)

Bases: *aiogram.types.base.TelegramObject*

This object represents one row of the high scores table for a game. And that's about all we've got for now. If you've got any questions, please check out our Bot FAQ

<https://core.telegram.org/bots/api#gamehighscore>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

Sticker

class aiogram.types.sticker.**Sticker** (*conf*: *Optional[Dict[str, Any]] = None*, ***kwargs*: *Any*)

Bases: *aiogram.types.base.TelegramObject*, *aiogram.types.mixins.Downloadable*

This object represents a sticker.

<https://core.telegram.org/bots/api#sticker>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

async set_position_in_set (*position*: *Integer*) → Boolean

Use this method to move a sticker in a set created by the bot to a specific position.

Source: <https://core.telegram.org/bots/api#setstickerpositioninset>

Parameters **position** (*base.Integer*) – New sticker position in the set, zero-based

Returns Returns True on success

Return type `base.Boolean`

async delete_from_set () → Boolean

Use this method to delete a sticker from a set created by the bot.

Source: <https://core.telegram.org/bots/api#deletestickerfromset>

Parameters **sticker** (`base.String`) – File identifier of the sticker

Returns Returns True on success

Return type `base.Boolean`

InlineQuery

class `aiogram.types.inline_query.InlineQuery` (*conf: Optional[Dict[str, Any]] = None, **kwargs: Any*)

Bases: `aiogram.types.base.TelegramObject`

This object represents an incoming inline query.

When the user sends an empty query, your bot could return some default or trending results.

<https://core.telegram.org/bots/api#inlinequery>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

async answer (*results: List[aiogram.types.inline_query_result.InlineQueryResult], cache_time: Optional[Integer] = None, is_personal: Optional[Boolean] = None, next_offset: Optional[String] = None, switch_pm_text: Optional[String] = None, switch_pm_parameter: Optional[String] = None*)

Use this method to send answers to an inline query. No more than 50 results per query are allowed.

Source: <https://core.telegram.org/bots/api#answerinlinequery>

Parameters

- **results** (`typing.List[types.InlineQueryResult]`) – A JSON-serialized array of results for the inline query
- **cache_time** (`typing.Union[base.Integer, None]`) – The maximum amount of time in seconds that the result of the inline query may be cached on the server. Defaults to 300.
- **is_personal** (`typing.Union[base.Boolean, None]`) – Pass True, if results may be cached on the server side only for the user that sent the query. By default, results may be returned to any user who sends the same query
- **next_offset** (`typing.Union[base.String, None]`) – Pass the offset that a client should send in the next query with the same text to receive more results. Pass an empty string if there are no more results or if you don't support pagination. Offset length can't exceed 64 bytes.
- **switch_pm_text** (`typing.Union[base.String, None]`) – If passed, clients will display a button with specified text that switches the user to a private chat with the bot and sends the bot a start message with the parameter `switch_pm_parameter`

- **switch_pm_parameter** (`typing.Union[base.String, None]`) – Deep-linking parameter for the /start message sent to the bot when user presses the switch button. 1-64 characters, only A-Z, a-z, 0-9, _ and - are allowed.

Returns On success, True is returned

Return type `base.Boolean`

Location

class `aiogram.types.location.Location` (*conf*: `Optional[Dict[str, Any]] = None`, ***kwargs*: `Any`)

Bases: `aiogram.types.base.TelegramObject`

This object represents a point on the map.

<https://core.telegram.org/bots/api#location>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

Animation

class `aiogram.types.animation.Animation` (*conf*: `Optional[Dict[str, Any]] = None`, ***kwargs*: `Any`)

Bases: `aiogram.types.base.TelegramObject`, `aiogram.types.mixins.Downloadable`

You can provide an animation for your game so that it looks stylish in chats (check out Lumberjack for an example). This object represents an animation file to be displayed in the message containing a game.

<https://core.telegram.org/bots/api#animation>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

InputMedia

class `aiogram.types.input_media.InputMedia` (**args*, ***kwargs*)

Bases: `aiogram.types.base.TelegramObject`

This object represents the content of a media message to be sent. It should be one of

- `InputMediaAnimation`
- `InputMediaDocument`
- `InputMediaAudio`
- `InputMediaPhoto`
- `InputMediaVideo`

That is only base class.

<https://core.telegram.org/bots/api#inputmedia>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

InputMediaAnimation

```
class aiogram.types.input_media.InputMediaAnimation(media: InputFile, thumb: Union[InputFile, String] = None, caption: String = None, width: Integer = None, height: Integer = None, duration: Integer = None, parse_mode: String = None, **kwargs)
```

Bases: *aiogram.types.input_media.InputMedia*

Represents an animation file (GIF or H.264/MPEG-4 AVC video without sound) to be sent.

<https://core.telegram.org/bots/api#inputmediaanimation>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

InputMediaDocument

```
class aiogram.types.input_media.InputMediaDocument(media: InputFile, thumb: Union[InputFile, String] = None, caption: String = None, parse_mode: String = None, **kwargs)
```

Bases: *aiogram.types.input_media.InputMedia*

Represents a photo to be sent.

<https://core.telegram.org/bots/api#inputmediadocument>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

InputMediaAudio

```
class aiogram.types.input_media.InputMediaAudio (media: InputFile, thumb: Union[InputFile, String] = None, caption: String = None, duration: Integer = None, performer: String = None, title: String = None, parse_mode: String = None, **kwargs)
```

Bases: *aiogram.types.input_media.InputMedia*

Represents an animation file (GIF or H.264/MPEG-4 AVC video without sound) to be sent.

<https://core.telegram.org/bots/api#inputmediaanimation>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

InputMediaPhoto

```
class aiogram.types.input_media.InputMediaPhoto (media: InputFile, thumb: Union[InputFile, String] = None, caption: String = None, parse_mode: String = None, **kwargs)
```

Bases: *aiogram.types.input_media.InputMedia*

Represents a photo to be sent.

<https://core.telegram.org/bots/api#inputmediaphoto>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

InputMediaVideo

```
class aiogram.types.input_media.InputMediaVideo (media: InputFile, thumb: Union[InputFile, String] = None, caption: String = None, width: Integer = None, height: Integer = None, duration: Integer = None, parse_mode: String = None, supports_streaming: Boolean = None, **kwargs)
```

Bases: *aiogram.types.input_media.InputMedia*

Represents a video to be sent.

<https://core.telegram.org/bots/api#inputmediavideo>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

MediaGroup

class aiogram.types.input_media.**MediaGroup** (*medias: Optional[List[Union[aiogram.types.input_media.InputMedia, Dict]]] = None*)

Bases: *aiogram.types.base.TelegramObject*

Helper for sending media group

Deserialize object

Parameters

- **conf** –
- **kwargs** –

attach_many (**medias: Union[aiogram.types.input_media.InputMedia, Dict]*)

Attach list of media

Parameters **medias** –

attach (*media: Union[aiogram.types.input_media.InputMedia, Dict]*)

Attach media

Parameters **media** –

attach_photo (*photo: Union[aiogram.types.input_media.InputMediaPhoto, InputFile], caption: String = None*)

Attach photo

Parameters

- **photo** –
- **caption** –

attach_video (*video: Union[aiogram.types.input_media.InputMediaVideo, InputFile], thumb: Union[InputFile, String] = None, caption: String = None, width: Integer = None, height: Integer = None, duration: Integer = None*)

Attach video

Parameters

- **video** –
- **caption** –
- **width** –
- **height** –
- **duration** –

to_python () → List

Get object as JSON serializable

Returns

InlineQueryResult

```
class aiogram.types.inline_query_result.InlineQueryResult (**kwargs)
```

Bases: *aiogram.types.base.TelegramObject*

This object represents one result of an inline query.

Telegram clients currently support results of the following 20 types

<https://core.telegram.org/bots/api#inlinequeryresult>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

InlineQueryResultArticle

```
class aiogram.types.inline_query_result.InlineQueryResultArticle(*,
                                                                    id:
                                                                    String, title:
                                                                    String, in-
                                                                    put_message_content:
                                                                    aiogram.types.input_message_content
                                                                    re-
                                                                    ply_markup:
                                                                    Op-
                                                                    tional[aiogram.types.inline_keyboard.
                                                                    =
                                                                    None,
                                                                    url:
                                                                    Op-
                                                                    tional[String]
                                                                    =
                                                                    None,
                                                                    hide_url:
                                                                    Op-
                                                                    tional[Boolean]
                                                                    =
                                                                    None,
                                                                    descrip-
                                                                    tion:
                                                                    Op-
                                                                    tional[String]
                                                                    =
                                                                    None,
                                                                    thumb_url:
                                                                    Op-
                                                                    tional[String]
                                                                    =
                                                                    None,
                                                                    thumb_width:
                                                                    Op-
                                                                    tional[Integer]
                                                                    =
                                                                    None,
                                                                    thumb_height:
                                                                    Op-
                                                                    tional[Integer]
                                                                    =
                                                                    None)
```

Bases: *aiogram.types.inline_query_result.InlineQueryResult*

Represents a link to an article or web page.

<https://core.telegram.org/bots/api#inlinequeryresultarticle>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

InlineQueryResultPhoto

```
class aiogram.types.inline_query_result.InlineQueryResultPhoto(*, id: String,
    photo_url: String,
    thumb_url: String,
    photo_width: Optional[Integer] = None,
    photo_height: Optional[Integer] = None,
    title: Optional[String] = None,
    description: Optional[String] = None,
    caption: Optional[String] = None,
    parse_mode: Optional[String] = None,
    reply_markup: Optional[aiogram.types.inline_keyboard.InlineKeyboardMarkup] = None,
    input_message_content: Optional[aiogram.types.input_message_content.InputMessageContent] = None)
```

Bases: *aiogram.types.inline_query_result.InlineQueryResult*

Represents a link to a photo.

By default, this photo will be sent by the user with optional caption. Alternatively, you can use `input_message_content` to send a message with the specified content instead of the photo.

<https://core.telegram.org/bots/api#inlinequeryresultphoto>

Deserialize object

Parameters

- `conf` –
- `kwargs` –

InlineQueryResultGif

```
class aiogram.types.inline_query_result.InlineQueryResultGif(*, id: String,
gif_url: String,
gif_width: Optional[Integer] =
None, gif_height: Optional[Integer]
= None, gif_duration: Optional[Integer] =
None, thumb_url: Optional[String]
= None, title: Optional[String]
= None, caption: Optional[String] =
None, parse_mode: Optional[String]
= None, reply_markup: Optional[aiogram.types.inline_keyboard.Inline
= None, input_message_content:
Optional[aiogram.types.input_message_content
= None)
```

Bases: `aiogram.types.inline_query_result.InlineQueryResult`

Represents a link to an animated GIF file.

By default, this animated GIF file will be sent by the user with optional caption. Alternatively, you can use `input_message_content` to send a message with the specified content instead of the animation.

<https://core.telegram.org/bots/api#inlinequeryresultgif>

Deserialize object

Parameters

- `conf` –
- `kwargs` –

InlineQueryResultMpeg4Gif

```
class aiogram.types.inline_query_result.InlineQueryResultMpeg4Gif(*id:  
    String,  
    mpeg4_url:  
    String,  
    thumb_url:  
    String,  
    mpeg4_width:  
    Optional[Integer]  
    = None,  
    mpeg4_height:  
    Optional[Integer]  
    = None,  
    mpeg4_duration:

```

Bases: *aiogram.types.inline_query_result.InlineQueryResult*

Represents a link to a video animation (H.264/MPEG-4 AVC video without sound).

By default, this animated MPEG-4 file will be sent by the user with optional caption. Alternatively, you can use `input_message_content` to send a message with the specified content instead of the animation.

                                                                = None)

```

Bases: *aiogram.types.inline_query_result.InlineQueryResult*

Represents a link to a page containing an embedded video player or a video file.

By default, this video file will be sent by the user with an optional caption. Alternatively, you can use `input_message_content` to send a message with the specified content instead of the video.

If an `InlineQueryResultVideo` message contains an embedded video (e.g., YouTube), you must replace its content using `input_message_content`.

```

Bases: `aiogram.types.inline_query_result.InlineQueryResult`

Represents a link to a file.

By default, this file will be sent by the user with an optional caption. Alternatively, you can use `input_message_content` to send a message with the specified content instead of the file. Currently, only .PDF and .ZIP files can be sent using this method.

Note: This will only work in Telegram versions released after 9 April, 2016. Older clients will ignore them.

Deserialize object

Parameters

- **conf** –
- **kwargs** –

InputFile

class aiogram.types.input_file.**InputFile** (*path_or_bytesio, filename=None, conf=None*)

Bases: *aiogram.types.base.TelegramObject*

This object represents the contents of a file to be uploaded. Must be posted using multipart/form-data in the usual way that files are uploaded via the browser.

Also that is not typical TelegramObject!

<https://core.telegram.org/bots/api#inputfile>

Parameters

- **path_or_bytesio** –
- **filename** –
- **conf** –

get_filename () → str

Get file name

Returns name

get_file ()

Get file object

Returns

classmethod from_url (*url, filename=None, chunk_size=65536*)

Download file from URL

Manually is not required action. You can send urls instead!

Parameters

- **url** – target URL
- **filename** – optional. set custom file name
- **chunk_size** –

Returns InputFile

save (*filename, chunk_size=65536*)

Write file to disk

Parameters

- **filename** –
- **chunk_size** –

to_python ()

Get object as JSON serializable

Returns

classmethod to_object (*data*)

Deserialize object

Parameters data –

Returns

PreCheckoutQuery

```
class aiogram.types.pre_checkout_query.PreCheckoutQuery (conf: Optional[Dict[str, Any]] = None, **kwargs: Any)
```

Bases: *aiogram.types.base.TelegramObject*

This object contains information about an incoming pre-checkout query. Your bot can offer users HTML5 games to play solo or to compete against each other in groups and one-on-one chats.

Create games via @BotFather using the /newgame command.

Please note that this kind of power requires responsibility: you will need to accept the terms for each game that your bots will be offering.

<https://core.telegram.org/bots/api#precheckoutquery>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

Voice

```
class aiogram.types.voice.Voice (conf: Optional[Dict[str, Any]] = None, **kwargs: Any)  
Bases: aiogram.types.base.TelegramObject, aiogram.types.mixins.Downloadable
```

This object represents a voice note.

<https://core.telegram.org/bots/api#voice>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

InputMessageContent

```
class aiogram.types.input_message_content.InputMessageContent (conf: Optional[Dict[str, Any]] = None, **kwargs: Any)
```

Bases: *aiogram.types.base.TelegramObject*

This object represents the content of a message to be sent as a result of an inline query.

Telegram clients currently support the following 4 types

<https://core.telegram.org/bots/api#inputmessagecontent>

Deserialize object

Parameters

- **conf** –

- **kwargs** –

InputContactMessageContent

```
class aiogram.types.input_message_content.InputContactMessageContent (phone_number:
    String,
    first_name:
    Optional[String]
    =
    None,
    last_name:
    Optional[String]
    =
    None)
```

Bases: *aiogram.types.input_message_content.InputMessageContent*

Represents the content of a contact message to be sent as the result of an inline query.

Note: This will only work in Telegram versions released after 9 April, 2016. Older clients will ignore them.

<https://core.telegram.org/bots/api#inputcontactmessagecontent>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

InputLocationMessageContent

```
class aiogram.types.input_message_content.InputLocationMessageContent (latitude:
    Float,
    longitude:
    Float)
```

Bases: *aiogram.types.input_message_content.InputMessageContent*

Represents the content of a location message to be sent as the result of an inline query.

Note: This will only work in Telegram versions released after 9 April, 2016. Older clients will ignore them.

<https://core.telegram.org/bots/api#inputlocationmessagecontent>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

InputTextMessageContent

```
class aiogram.types.input_message_content.InputTextMessageContent (message_text:  
    Optional[String]  
    = None,  
    parse_mode:  
    Optional[String]  
    = None,  
    disable_web_page_preview:  
    Optional[Boolean]  
    = None)
```

Bases: *aiogram.types.input_message_content.InputMessageContent*

Represents the content of a text message to be sent as the result of an inline query.

<https://core.telegram.org/bots/api#inputtextmessagecontent>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

InputVenueMessageContent

```
class aiogram.types.input_message_content.InputVenueMessageContent (latitude:  
    Optional[Float]  
    = None,  
    longitude: Optional[Float]  
    = None,  
    title: Optional[String]  
    = None,  
    address:  
    Optional[String]  
    = None,  
    foursquare_id:  
    Optional[String]  
    = None)
```

Bases: *aiogram.types.input_message_content.InputMessageContent*

Represents the content of a venue message to be sent as the result of an inline query.

Note: This will only work in Telegram versions released after 9 April, 2016. Older clients will ignore them.

<https://core.telegram.org/bots/api#inputvenuemessagecontent>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

Update

class aiogram.types.update.**Update** (*conf: Optional[Dict[str, Any]] = None, **kwargs: Any*)

Bases: *aiogram.types.base.TelegramObject*

This object represents an incoming update. At most one of the optional parameters can be present in any given update.

<https://core.telegram.org/bots/api#update>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

AllowedUpdates

class aiogram.types.update.**AllowedUpdates**

Bases: *aiogram.utils.helper.Helper*

Helper for allowed_updates parameter in getUpdates and setWebhook methods.

You can use &, + or | operators for make combination of allowed updates.

Example:

```
>>> bot.get_updates(allowed_updates=AllowedUpdates.MESSAGE + AllowedUpdates.
↳EDITED_MESSAGE)
```

PhotoSize

class aiogram.types.photo_size.**PhotoSize** (*conf: Optional[Dict[str, Any]] = None, **kwargs: Any*)

Bases: *aiogram.types.base.TelegramObject, aiogram.types.mixins.Downloadable*

This object represents one size of a photo or a file / sticker thumbnail.

<https://core.telegram.org/bots/api#photosize>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

Venue

class aiogram.types.venue.Venue (*conf: Optional[Dict[str, Any]] = None, **kwargs: Any*)

Bases: *aiogram.types.base.TelegramObject*

This object represents a venue.

<https://core.telegram.org/bots/api#venue>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

ChosenInlineResult

class aiogram.types.chosen_inline_result.ChosenInlineResult (*conf: Optional[Dict[str, Any]] = None, **kwargs: Any*)

Bases: *aiogram.types.base.TelegramObject*

Represents a result of an inline query that was chosen by the user and sent to their chat partner.

Note: It is necessary to enable inline feedback via @Botfather in order to receive these objects in updates. Your bot can accept payments from Telegram users. Please see the introduction to payments for more details on the process and how to set up payments for your bot. Please note that users will need Telegram v.4.0 or higher to use payments (released on May 18, 2017).

<https://core.telegram.org/bots/api#choseninlineresult>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

VideoNote

class aiogram.types.video_note.VideoNote (*conf: Optional[Dict[str, Any]] = None, **kwargs: Any*)

Bases: *aiogram.types.base.TelegramObject, aiogram.types.mixins.Downloadable*

This object represents a video message (available in Telegram apps as of v.4.0).

<https://core.telegram.org/bots/api#videonote>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

WebhookInfo

class aiogram.types.webhook_info.**WebhookInfo** (*conf*: *Optional[Dict[str, Any]] = None*,
***kwargs*: *Any*)

Bases: *aiogram.types.base.TelegramObject*

Contains information about the current status of a webhook.

<https://core.telegram.org/bots/api#webhookinfo>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

PassportFile

class aiogram.types.passport_file.**PassportFile** (*conf*: *Optional[Dict[str, Any]] = None*,
***kwargs*: *Any*)

Bases: *aiogram.types.base.TelegramObject*

This object represents a file uploaded to Telegram Passport. Currently all Telegram Passport files are in JPEG format when decrypted and don't exceed 10MB.

<https://core.telegram.org/bots/api#passportfile>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

ChatMember

class aiogram.types.chat_member.**ChatMember** (*conf*: *Optional[Dict[str, Any]] = None*,
***kwargs*: *Any*)

Bases: *aiogram.types.base.TelegramObject*

This object contains information about one member of a chat.

<https://core.telegram.org/bots/api#chatmember>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

ChatMemberStatus

class aiogram.types.chat_member.ChatMemberStatus

Bases: aiogram.utils.helper.Helper

Chat member status

ShippingOption

class aiogram.types.shipping_option.ShippingOption (*id: String, title: String, prices: List[aiogram.types.labeled_price.LabeledPrice] = None*)

Bases: *aiogram.types.base.TelegramObject*

This object represents one shipping option.

<https://core.telegram.org/bots/api#shippingoption>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

add (*price: aiogram.types.labeled_price.LabeledPrice*)

Add price

Parameters **price** –

Returns

ChatPhoto

class aiogram.types.chat_photo.ChatPhoto (*conf: Optional[Dict[str, Any]] = None, **kwargs: Any*)

Bases: *aiogram.types.base.TelegramObject*

This object represents a chat photo.

<https://core.telegram.org/bots/api#chatphoto>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

async download_small (*destination=None, timeout=30, chunk_size=65536, seek=True, make_dirs=True*)

Download file

Parameters

- **destination** – filename or instance of `io.IOBase`. For e. g. `io.BytesIO`
- **timeout** – Integer
- **chunk_size** – Integer

- **seek** – Boolean - go to start of file when downloading is finished.
- **make_dirs** – Make dirs if not exist

Returns destination

async download_big (*destination=None, timeout=30, chunk_size=65536, seek=True, make_dirs=True*)

Download file

Parameters

- **destination** – filename or instance of `io.IOBase`. For e. g. `io.BytesIO`
- **timeout** – Integer
- **chunk_size** – Integer
- **seek** – Boolean - go to start of file when downloading is finished.
- **make_dirs** – Make dirs if not exist

Returns destination

Contact

class `aiogram.types.contact.Contact` (*conf: Optional[Dict[str, Any]] = None, **kwargs: Any*)

Bases: `aiogram.types.base.TelegramObject`

This object represents a phone contact.

<https://core.telegram.org/bots/api#contact>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

Message

class `aiogram.types.message.Message` (*conf: Optional[Dict[str, Any]] = None, **kwargs: Any*)

Bases: `aiogram.types.base.TelegramObject`

This object represents a message.

<https://core.telegram.org/bots/api#message>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

is_command()

Check message text is command

Returns bool

get_full_command()

Split command and args

Returns tuple of (command, args)

get_command (*pure=False*)
Get command from message

Returns

get_args ()
Get arguments

Returns

parse_entities (*as_html=True*)
Text or caption formatted as HTML or Markdown.

Returns str

property md_text
Text or caption formatted as markdown.

Returns str

property html_text
Text or caption formatted as HTML

Returns str

property url
Get URL for the message

Returns str

link (*text, as_html=True*) → str
Generate URL for using in text messages with HTML or MD parse mode

Parameters

- **text** – link label
- **as_html** – generate as HTML

Returns str

async answer (*text: String, parse_mode: Optional[String] = None, disable_web_page_preview: Optional[Boolean] = None, disable_notification: Optional[Boolean] = None, reply_markup: Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardRemove, aiogram.types.force_reply.ForceReply]] = None, reply: Boolean = False*) → *aiogram.types.message.Message*

Answer to this message

Parameters

- **text** (*base.String*) – Text of the message to be sent
- **parse_mode** (*typing.Union[base.String, None]*) – Send Markdown or HTML, if you want Telegram apps to show bold, italic, fixed-width text or inline URLs in your bot’s message.
- **disable_web_page_preview** (*typing.Union[base.Boolean, None]*) – Disables link previews for links in this message
- **disable_notification** (*typing.Union[base.Boolean, None]*) – Sends the message silently. Users will receive a notification with no sound

- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]`) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user
- **reply** (`base.Boolean`) – fill ‘reply_to_message_id’

Returns On success, the sent Message is returned

Return type `types.Message`

```
async answer_photo (photo: Union[InputFile, String], caption: Optional[String]
= None, parse_mode: Optional[String] = None, disable_notification: Optional[Boolean] = None, reply_markup: Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardRemove, aiogram.types.force_reply.ForceReply]] = None, reply: Boolean = False)
→ aiogram.types.message.Message
```

Use this method to send photos.

Source: <https://core.telegram.org/bots/api#sendphoto>

Parameters

- **photo** (`typing.Union[base.InputFile, base.String]`) – Photo to send
- **caption** (`typing.Union[base.String, None]`) – Photo caption (may also be used when resending photos by file_id), 0-1024 characters
- **parse_mode** (`typing.Union[base.String, None]`) – Send Markdown or HTML, if you want Telegram apps to show bold, italic, fixed-width text or inline URLs in your bot’s message.
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]`) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user
- **reply** (`base.Boolean`) – fill ‘reply_to_message_id’

Returns On success, the sent Message is returned

Return type `types.Message`

```
async answer_audio (audio: Union[InputFile, String], caption: Optional[String] = None,
parse_mode: Optional[String] = None, duration: Optional[Integer] = None, performer: Optional[String] = None, title: Optional[String] = None,
disable_notification: Optional[Boolean] = None, reply_markup: Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardRemove, aiogram.types.force_reply.ForceReply]] = None, reply: Boolean = False)
→ aiogram.types.message.Message
```

Use this method to send audio files, if you want Telegram clients to display them in the music player. Your audio must be in the .mp3 format.

For sending voice messages, use the `sendVoice` method instead.

Source: <https://core.telegram.org/bots/api#sendaudio>

Parameters

- **audio** (`typing.Union[base.InputFile, base.String]`) – Audio file to send.
- **caption** (`typing.Union[base.String, None]`) – Audio caption, 0-200 characters
- **parse_mode** (`typing.Union[base.String, None]`) – Send Markdown or HTML, if you want Telegram apps to show bold, italic, fixed-width text or inline URLs in your bot’s message.
- **duration** (`typing.Union[base.Integer, None]`) – Duration of the audio in seconds
- **performer** (`typing.Union[base.String, None]`) – Performer
- **title** (`typing.Union[base.String, None]`) – Track name
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound.
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]`) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user
- **reply** – fill ‘reply_to_message_id’

Returns On success, the sent `Message` is returned.

Return type `types.Message`

async answer_animation (*animation: Union[InputFile, String], duration: Optional[Integer] = None, width: Optional[Integer] = None, height: Optional[Integer] = None, thumb: Optional[Union[InputFile, String]] = None, caption: Optional[String] = None, parse_mode: Optional[String] = None, disable_notification: Optional[Boolean] = None, reply_markup: Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardRemove, aiogram.types.force_reply.ForceReply]] = None, reply: Boolean = False*) → *aiogram.types.message.Message*

Use this method to send animation files (GIF or H.264/MPEG-4 AVC video without sound).

On success, the sent `Message` is returned. Bots can currently send animation files of up to 50 MB in size, this limit may be changed in the future.

Source <https://core.telegram.org/bots/api#sendanimation>

Parameters

- **animation** (`typing.Union[base.InputFile, base.String]`) – Animation to send. Pass a `file_id` as `String` to send an animation that exists on the Telegram servers (recommended), pass an HTTP URL as a `String` for Telegram to get an animation from the Internet, or upload a new animation using `multipart/form-data`
- **duration** (`typing.Union[base.Integer, None]`) – Duration of sent animation in seconds

- **width** (`typing.Union[base.Integer, None]`) – Animation width
- **height** (`typing.Union[base.Integer, None]`) – Animation height
- **thumb** (`typing.Union[typing.Union[base.InputFile, base.String], None]`) – Thumbnail of the file sent. The thumbnail should be in JPEG format and less than 200 kB in size. A thumbnail’s width and height should not exceed 90.
- **caption** (`typing.Union[base.String, None]`) – Animation caption (may also be used when resending animation by `file_id`), 0-1024 characters
- **parse_mode** (`typing.Union[base.String, None]`) – Send Markdown or HTML, if you want Telegram apps to show bold, italic, fixed-width text or inline URLs in the media caption
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound
- **reply_markup** (`typing.Union[typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply], None]`) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user
- **reply** – fill ‘`reply_to_message_id`’

Returns On success, the sent Message is returned

Return type `types.Message`

```
async answer_document (document: Union[InputFile, String], caption: Optional[String]
                        = None, parse_mode: Optional[String] = None, dis-
                        able_notification: Optional[Boolean] = None, reply_markup: Op-
                        tional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup,
                        aiogram.types.reply_keyboard.ReplyKeyboardMarkup,
                        aiogram.types.reply_keyboard.ReplyKeyboardRemove,
                        aiogram.types.force_reply.ForceReply]] = None, reply: Boolean =
                        False) → aiogram.types.message.Message
```

Use this method to send general files.

Bots can currently send files of any type of up to 50 MB in size, this limit may be changed in the future.

Source: <https://core.telegram.org/bots/api#senddocument>

Parameters

- **document** (`typing.Union[base.InputFile, base.String]`) – File to send.
- **caption** (`typing.Union[base.String, None]`) – Document caption (may also be used when resending documents by `file_id`), 0-200 characters
- **parse_mode** (`typing.Union[base.String, None]`) – Send Markdown or HTML, if you want Telegram apps to show bold, italic, fixed-width text or inline URLs in the media caption
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound.
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply], None]`) – Additional interface options. A JSON-serialized

object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user

- **reply** – fill ‘reply_to_message_id’

Returns On success, the sent Message is returned.

Return type `types.Message`

```
async answer_video (video: Union[InputFile, String], duration: Optional[Integer] = None,
                    width: Optional[Integer] = None, height: Optional[Integer] = None,
                    caption: Optional[String] = None, parse_mode: Optional[String] =
                    None, disable_notification: Optional[Boolean] = None, reply_markup:
                    Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup,
                    aiogram.types.reply_keyboard.ReplyKeyboardMarkup,
                    aiogram.types.reply_keyboard.ReplyKeyboardRemove,
                    aiogram.types.force_reply.ForceReply]] = None, reply: Boolean = False)
                    → aiogram.types.message.Message
```

Use this method to send video files, Telegram clients support mp4 videos (other formats may be sent as Document).

Source: <https://core.telegram.org/bots/api#sendvideo>

Parameters

- **video** (`typing.Union[base.InputFile, base.String]`) – Video to send.
- **duration** (`typing.Union[base.Integer, None]`) – Duration of sent video in seconds
- **width** (`typing.Union[base.Integer, None]`) – Video width
- **height** (`typing.Union[base.Integer, None]`) – Video height
- **caption** (`typing.Union[base.String, None]`) – Video caption (may also be used when resending videos by `file_id`), 0-200 characters
- **parse_mode** (`typing.Union[base.String, None]`) – Send Markdown or HTML, if you want Telegram apps to show bold, italic, fixed-width text or inline URLs in the media caption
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound.
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]`) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user
- **reply** – fill ‘reply_to_message_id’

Returns On success, the sent Message is returned.

Return type `types.Message`

```
async answer_voice (voice: Union[InputFile, String], caption: Optional[String] = None,
                    parse_mode: Optional[String] = None, duration: Optional[Integer] =
                    None, disable_notification: Optional[Boolean] = None, reply_markup:
                    Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup,
                    aiogram.types.reply_keyboard.ReplyKeyboardMarkup,
                    aiogram.types.reply_keyboard.ReplyKeyboardRemove,
                    aiogram.types.force_reply.ForceReply]] = None, reply: Boolean = False)
                    → aiogram.types.message.Message
```

Use this method to send audio files, if you want Telegram clients to display the file as a playable voice message.

For this to work, your audio must be in an .ogg file encoded with OPUS (other formats may be sent as Audio or Document).

Source: <https://core.telegram.org/bots/api#sendvoice>

Parameters

- **voice** (typing.Union[base.InputFile, base.String]) – Audio file to send.
- **caption** (typing.Union[base.String, None]) – Voice message caption, 0-200 characters
- **parse_mode** (typing.Union[base.String, None]) – Send Markdown or HTML, if you want Telegram apps to show bold, italic, fixed-width text or inline URLs in the media caption
- **duration** (typing.Union[base.Integer, None]) – Duration of the voice message in seconds
- **disable_notification** (typing.Union[base.Boolean, None]) – Sends the message silently. Users will receive a notification with no sound.
- **reply_markup** (typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user
- **reply** – fill 'reply_to_message_id'

Returns On success, the sent Message is returned.

Return type types.Message

```
async answer_video_note (video_note: Union[InputFile, String], duration: Op-
                    tional[Integer] = None, length: Optional[Integer] = None, dis-
                    able_notification: Optional[Boolean] = None, reply_markup: Op-
                    tional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup,
                    aiogram.types.reply_keyboard.ReplyKeyboardMarkup,
                    aiogram.types.reply_keyboard.ReplyKeyboardRemove,
                    aiogram.types.force_reply.ForceReply]] = None, reply: Boolean
                    = False) → aiogram.types.message.Message
```

As of v.4.0, Telegram clients support rounded square mp4 videos of up to 1 minute long. Use this method to send video messages.

Source: <https://core.telegram.org/bots/api#sendvideonote>

Parameters

- **video_note** (`typing.Union[base.InputFile, base.String]`) – Video note to send.
- **duration** (`typing.Union[base.Integer, None]`) – Duration of sent video in seconds
- **length** (`typing.Union[base.Integer, None]`) – Video width and height
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound.
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]`) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user
- **reply** – fill ‘reply_to_message_id’

Returns On success, the sent Message is returned.

Return type `types.Message`

async answer_media_group (*media: Union[aiogram.types.input_media.MediaGroup, List], disable_notification: Optional[Boolean] = None, reply: Boolean = False*) → `List[aiogram.types.message.Message]`

Use this method to send a group of photos or videos as an album.

Source: <https://core.telegram.org/bots/api#sendmediagroup>

Parameters

- **media** (`typing.Union[types.MediaGroup, typing.List]`) – A JSON-serialized array describing photos and videos to be sent
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound.
- **reply** – fill ‘reply_to_message_id’

Returns On success, an array of the sent Messages is returned.

Return type `typing.List[types.Message]`

async answer_location (*latitude: Float, longitude: Float, live_period: Optional[Integer] = None, disable_notification: Optional[Boolean] = None, reply_markup: Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardRemove, aiogram.types.force_reply.ForceReply]] = None, reply: Boolean = False*) → `aiogram.types.message.Message`

Use this method to send point on the map.

Source: <https://core.telegram.org/bots/api#sendlocation>

Parameters

- **latitude** (`base.Float`) – Latitude of the location
- **longitude** (`base.Float`) – Longitude of the location
- **live_period** (`typing.Union[base.Integer, None]`) – Period in seconds for which the location will be updated

- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound.
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]`) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user
- **reply** – fill ‘reply_to_message_id’

Returns On success, the sent Message is returned.

Return type `types.Message`

```
async answer_venue (latitude: Float, longitude: Float, title: String, address: String, foursquare_id: Optional[String] = None, disable_notification: Optional[Boolean] = None, reply_markup: Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardRemove, aiogram.types.force_reply.ForceReply]] = None, reply: Boolean = False)
→ aiogram.types.message.Message
```

Use this method to send information about a venue.

Source: <https://core.telegram.org/bots/api#sendvenue>

Parameters

- **latitude** (`base.Float`) – Latitude of the venue
- **longitude** (`base.Float`) – Longitude of the venue
- **title** (`base.String`) – Name of the venue
- **address** (`base.String`) – Address of the venue
- **foursquare_id** (`typing.Union[base.String, None]`) – Foursquare identifier of the venue
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound.
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]`) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user
- **reply** – fill ‘reply_to_message_id’

Returns On success, the sent Message is returned.

Return type `types.Message`

```
async answer_contact (phone_number: String, first_name: String, last_name: Optional[String] = None, disable_notification: Optional[Boolean] = None, reply_markup: Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardRemove, aiogram.types.force_reply.ForceReply]] = None, reply: Boolean = False)
→ aiogram.types.message.Message
```

Use this method to send phone contacts.

Source: <https://core.telegram.org/bots/api#sendcontact>

Parameters

- **phone_number** (`base.String`) – Contact’s phone number
- **first_name** (`base.String`) – Contact’s first name
- **last_name** (`typing.Union[base.String, None]`) – Contact’s last name
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound.
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]`) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user
- **reply** – fill ‘reply_to_message_id’

Returns On success, the sent `Message` is returned.

Return type `types.Message`

```
async answer_sticker (sticker: Union[InputFile, String], disable_notification: Optional[Boolean] = None, reply_markup: Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardRemove, aiogram.types.force_reply.ForceReply]] = None, reply: Boolean = False) → aiogram.types.message.Message
```

Use this method to send .webp stickers.

Source: <https://core.telegram.org/bots/api#sendsticker>

Parameters

- **sticker** (`typing.Union[base.InputFile, base.String]`) – Sticker to send.
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound.
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]`) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user
- **reply** – fill ‘reply_to_message_id’

Returns On success, the sent `Message` is returned.

Return type `types.Message`

```
async answer_dice (emoji: Optional[String] = None, disable_notification: Optional[Boolean] = None, reply_markup: Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardRemove, aiogram.types.force_reply.ForceReply]] = None, reply: Boolean = False) → aiogram.types.message.Message
```

Use this method to send a dice, which will have a random value from 1 to 6. On success, the sent `Message`

is returned. (Yes, we’re aware of the “proper” singular of die. But it’s awkward, and we decided to help it change. One dice at a time!)

Source: <https://core.telegram.org/bots/api#senddice>

Parameters

- **emoji** (`typing.Union[base.String, None]`) – Emoji on which the dice throw animation is based. Currently, must be one of “” or “”. Defaults to “”
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound.
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]`) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user
- **reply** – fill ‘reply_to_message_id’

Returns On success, the sent Message is returned.

Return type `types.Message`

```
async reply(text: String, parse_mode: Optional[String] = None, disable_web_page_preview:
Optional[Boolean] = None, disable_notification: Optional[Boolean] = None, re-
ply_markup: Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup,
aiogram.types.reply_keyboard.ReplyKeyboardMarkup,
aiogram.types.reply_keyboard.ReplyKeyboardRemove,
aiogram.types.force_reply.ForceReply]] = None, reply: Boolean = True) →
aiogram.types.message.Message
```

Reply to this message

Parameters

- **text** (`base.String`) – Text of the message to be sent
- **parse_mode** (`typing.Union[base.String, None]`) – Send Markdown or HTML, if you want Telegram apps to show bold, italic, fixed-width text or inline URLs in your bot’s message.
- **disable_web_page_preview** (`typing.Union[base.Boolean, None]`) – Disables link previews for links in this message
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]`) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user
- **reply** (`base.Boolean`) – fill ‘reply_to_message_id’

Returns On success, the sent Message is returned

Return type `types.Message`

```
async reply_photo (photo: Union[InputFile, String], caption: Optional[String] = None, parse_mode: Optional[String] = None, disable_notification: Optional[Boolean] = None, reply_markup: Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardRemove, aiogram.types.force_reply.ForceReply]] = None, reply: Boolean = True) → aiogram.types.message.Message
```

Use this method to send photos.

Source: <https://core.telegram.org/bots/api#sendphoto>

Parameters

- **photo** (typing.Union[base.InputFile, base.String]) – Photo to send
- **caption** (typing.Union[base.String, None]) – Photo caption (may also be used when resending photos by file_id), 0-1024 characters
- **parse_mode** (typing.Union[base.String, None]) – Send Markdown or HTML, if you want Telegram apps to show bold, italic, fixed-width text or inline URLs in your bot's message.
- **disable_notification** (typing.Union[base.Boolean, None]) – Sends the message silently. Users will receive a notification with no sound
- **reply_markup** (typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user
- **reply** (base.Boolean) – fill 'reply_to_message_id'

Returns On success, the sent Message is returned

Return type types.Message

```
async reply_audio (audio: Union[InputFile, String], caption: Optional[String] = None, parse_mode: Optional[String] = None, duration: Optional[Integer] = None, performer: Optional[String] = None, title: Optional[String] = None, disable_notification: Optional[Boolean] = None, reply_markup: Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardRemove, aiogram.types.force_reply.ForceReply]] = None, reply: Boolean = True) → aiogram.types.message.Message
```

Use this method to send audio files, if you want Telegram clients to display them in the music player. Your audio must be in the .mp3 format.

For sending voice messages, use the sendVoice method instead.

Source: <https://core.telegram.org/bots/api#sendaudio>

Parameters

- **audio** (typing.Union[base.InputFile, base.String]) – Audio file to send.
- **caption** (typing.Union[base.String, None]) – Audio caption, 0-200 characters

- **parse_mode** (`typing.Union[base.String, None]`) – Send Markdown or HTML, if you want Telegram apps to show bold, italic, fixed-width text or inline URLs in your bot’s message.
- **duration** (`typing.Union[base.Integer, None]`) – Duration of the audio in seconds
- **performer** (`typing.Union[base.String, None]`) – Performer
- **title** (`typing.Union[base.String, None]`) – Track name
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound.
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]`) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user
- **reply** – fill ‘reply_to_message_id’

Returns On success, the sent Message is returned.

Return type `types.Message`

```
async reply_animation(animation: Union[InputFile, String], duration: Optional[Integer] = None, width: Optional[Integer] = None, height: Optional[Integer] = None, thumb: Optional[Union[InputFile, String]] = None, caption: Optional[String] = None, parse_mode: Optional[String] = None, disable_notification: Optional[Boolean] = None, reply_markup: Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardRemove, aiogram.types.force_reply.ForceReply]] = None, reply: Boolean = True) → aiogram.types.message.Message
```

Use this method to send animation files (GIF or H.264/MPEG-4 AVC video without sound).

On success, the sent Message is returned. Bots can currently send animation files of up to 50 MB in size, this limit may be changed in the future.

Source <https://core.telegram.org/bots/api#sendanimation>

Parameters

- **animation** (`typing.Union[base.InputFile, base.String]`) – Animation to send. Pass a `file_id` as `String` to send an animation that exists on the Telegram servers (recommended), pass an HTTP URL as a `String` for Telegram to get an animation from the Internet, or upload a new animation using `multipart/form-data`
- **duration** (`typing.Union[base.Integer, None]`) – Duration of sent animation in seconds
- **width** (`typing.Union[base.Integer, None]`) – Animation width
- **height** (`typing.Union[base.Integer, None]`) – Animation height
- **thumb** (`typing.Union[typing.Union[base.InputFile, base.String], None]`) – Thumbnail of the file sent. The thumbnail should be in JPEG format and less than 200 kB in size. A thumbnail’s width and height should not exceed 90.

- **caption** (`typing.Union[base.String, None]`) – Animation caption (may also be used when resending animation by `file_id`), 0-1024 characters
- **parse_mode** (`typing.Union[base.String, None]`) – Send Markdown or HTML, if you want Telegram apps to show bold, italic, fixed-width text or inline URLs in the media caption
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound
- **reply_markup** (`typing.Union[typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply], None]`) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user
- **reply** – fill ‘reply_to_message_id’

Returns On success, the sent Message is returned

Return type `types.Message`

```
async reply_document (document: Union[InputFile, String], caption: Optional[String] = None, parse_mode: Optional[String] = None, disable_notification: Optional[Boolean] = None, reply_markup: Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardRemove, aiogram.types.force_reply.ForceReply]] = None, reply: Boolean = True) → aiogram.types.message.Message
```

Use this method to send general files.

Bots can currently send files of any type of up to 50 MB in size, this limit may be changed in the future.

Source: <https://core.telegram.org/bots/api#senddocument>

Parameters

- **document** (`typing.Union[base.InputFile, base.String]`) – File to send.
- **caption** (`typing.Union[base.String, None]`) – Document caption (may also be used when resending documents by `file_id`), 0-200 characters
- **parse_mode** (`typing.Union[base.String, None]`) – Send Markdown or HTML, if you want Telegram apps to show bold, italic, fixed-width text or inline URLs in the media caption
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound.
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply], None]`) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user
- **reply** – fill ‘reply_to_message_id’

Returns On success, the sent Message is returned.

Return type `types.Message`

async reply_video (*video: Union[InputFile, String], duration: Optional[Integer] = None, width: Optional[Integer] = None, height: Optional[Integer] = None, caption: Optional[String] = None, parse_mode: Optional[String] = None, disable_notification: Optional[Boolean] = None, reply_markup: Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardRemove, aiogram.types.force_reply.ForceReply]] = None, reply: Boolean = True*) → *aiogram.types.message.Message*

Use this method to send video files, Telegram clients support mp4 videos (other formats may be sent as Document).

Source: <https://core.telegram.org/bots/api#sendvideo>

Parameters

- **video** (*typing.Union[base.InputFile, base.String]*) – Video to send.
- **duration** (*typing.Union[base.Integer, None]*) – Duration of sent video in seconds
- **width** (*typing.Union[base.Integer, None]*) – Video width
- **height** (*typing.Union[base.Integer, None]*) – Video height
- **caption** (*typing.Union[base.String, None]*) – Video caption (may also be used when resending videos by `file_id`), 0-200 characters
- **parse_mode** (*typing.Union[base.String, None]*) – Send Markdown or HTML, if you want Telegram apps to show bold, italic, fixed-width text or inline URLs in the media caption
- **disable_notification** (*typing.Union[base.Boolean, None]*) – Sends the message silently. Users will receive a notification with no sound.
- **reply_markup** (*typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]*) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user
- **reply** – fill 'reply_to_message_id'

Returns On success, the sent Message is returned.

Return type *types.Message*

async reply_voice (*voice: Union[InputFile, String], caption: Optional[String] = None, parse_mode: Optional[String] = None, duration: Optional[Integer] = None, disable_notification: Optional[Boolean] = None, reply_markup: Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardRemove, aiogram.types.force_reply.ForceReply]] = None, reply: Boolean = True*) → *aiogram.types.message.Message*

Use this method to send audio files, if you want Telegram clients to display the file as a playable voice message.

For this to work, your audio must be in an .ogg file encoded with OPUS (other formats may be sent as Audio or Document).

Source: <https://core.telegram.org/bots/api#sendvoice>

Parameters

- **voice** (`typing.Union[base.InputFile, base.String]`) – Audio file to send.
- **caption** (`typing.Union[base.String, None]`) – Voice message caption, 0-200 characters
- **parse_mode** (`typing.Union[base.String, None]`) – Send Markdown or HTML, if you want Telegram apps to show bold, italic, fixed-width text or inline URLs in the media caption
- **duration** (`typing.Union[base.Integer, None]`) – Duration of the voice message in seconds
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound.
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]`) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user
- **reply** – fill ‘reply_to_message_id’

Returns On success, the sent Message is returned.

Return type `types.Message`

async reply_video_note (*video_note: Union[InputFile, String], duration: Optional[Integer] = None, length: Optional[Integer] = None, disable_notification: Optional[Boolean] = None, reply_markup: Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardRemove, aiogram.types.force_reply.ForceReply]] = None, reply: Boolean = True*) → *aiogram.types.message.Message*

As of v.4.0, Telegram clients support rounded square mp4 videos of up to 1 minute long. Use this method to send video messages.

Source: <https://core.telegram.org/bots/api#sendvideonote>

Parameters

- **video_note** (`typing.Union[base.InputFile, base.String]`) – Video note to send.
- **duration** (`typing.Union[base.Integer, None]`) – Duration of sent video in seconds
- **length** (`typing.Union[base.Integer, None]`) – Video width and height
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound.
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]`) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user
- **reply** – fill ‘reply_to_message_id’

Returns On success, the sent Message is returned.

Return type `types.Message`

async reply_media_group (*media: Union[aiogram.types.input_media.MediaGroup, List], disable_notification: Optional[Boolean] = None, reply: Boolean = True*) → List[aiogram.types.message.Message]

Use this method to send a group of photos or videos as an album.

Source: <https://core.telegram.org/bots/api#sendmediagroup>

Parameters

- **media** (`typing.Union[types.MediaGroup, typing.List]`) – A JSON-serialized array describing photos and videos to be sent
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound.
- **reply** – fill ‘reply_to_message_id’

Returns On success, an array of the sent Messages is returned.

Return type `typing.List[types.Message]`

async reply_location (*latitude: Float, longitude: Float, live_period: Optional[Integer] = None, disable_notification: Optional[Boolean] = None, reply_markup: Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardRemove, aiogram.types.force_reply.ForceReply]] = None, reply: Boolean = True*) → aiogram.types.message.Message

Use this method to send point on the map.

Source: <https://core.telegram.org/bots/api#sendlocation>

Parameters

- **latitude** (`base.Float`) – Latitude of the location
- **longitude** (`base.Float`) – Longitude of the location
- **live_period** (`typing.Union[base.Integer, None]`) – Period in seconds for which the location will be updated
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound.
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]`) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user
- **reply** – fill ‘reply_to_message_id’

Returns On success, the sent Message is returned.

Return type `types.Message`

```
async reply_venue (latitude: Float, longitude: Float, title: String, address: String, foursquare_id: Optional[String] = None, disable_notification: Optional[Boolean] = None, reply_markup: Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardRemove, aiogram.types.force_reply.ForceReply]] = None, reply: Boolean = True) → aiogram.types.message.Message
```

Use this method to send information about a venue.

Source: <https://core.telegram.org/bots/api#sendvenue>

Parameters

- **latitude** (`base.Float`) – Latitude of the venue
- **longitude** (`base.Float`) – Longitude of the venue
- **title** (`base.String`) – Name of the venue
- **address** (`base.String`) – Address of the venue
- **foursquare_id** (`typing.Union[base.String, None]`) – Foursquare identifier of the venue
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound.
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]`) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user
- **reply** – fill 'reply_to_message_id'

Returns On success, the sent Message is returned.

Return type `types.Message`

```
async reply_contact (phone_number: String, first_name: String, last_name: Optional[String] = None, disable_notification: Optional[Boolean] = None, reply_markup: Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardMarkup, aiogram.types.reply_keyboard.ReplyKeyboardRemove, aiogram.types.force_reply.ForceReply]] = None, reply: Boolean = True) → aiogram.types.message.Message
```

Use this method to send phone contacts.

Source: <https://core.telegram.org/bots/api#sendcontact>

Parameters

- **phone_number** (`base.String`) – Contact's phone number
- **first_name** (`base.String`) – Contact's first name
- **last_name** (`typing.Union[base.String, None]`) – Contact's last name
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound.
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove,`

`types.ForceReply, None]`) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user

- **reply** – fill ‘reply_to_message_id’

Returns On success, the sent Message is returned.

Return type `types.Message`

```
async reply_sticker (sticker: Union[InputFile, String], disable_notification:
Optional[Boolean] = None, reply_markup: Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup,
aiogram.types.reply_keyboard.ReplyKeyboardMarkup,
aiogram.types.reply_keyboard.ReplyKeyboardRemove,
aiogram.types.force_reply.ForceReply]] = None, reply: Boolean =
True) → aiogram.types.message.Message
```

Use this method to send .webp stickers.

Source: <https://core.telegram.org/bots/api#sendsticker>

Parameters

- **sticker** (`typing.Union[base.InputFile, base.String]`) – Sticker to send.
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound.
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]`) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user
- **reply** – fill ‘reply_to_message_id’

Returns On success, the sent Message is returned.

Return type `types.Message`

```
async reply_dice (emoji: Optional[String] = None, disable_notification:
Optional[Boolean] = None, reply_markup: Optional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup,
aiogram.types.reply_keyboard.ReplyKeyboardMarkup,
aiogram.types.reply_keyboard.ReplyKeyboardRemove,
aiogram.types.force_reply.ForceReply]] = None, reply: Boolean = True)
→ aiogram.types.message.Message
```

Use this method to send a dice, which will have a random value from 1 to 6. On success, the sent Message is returned. (Yes, we’re aware of the “proper” singular of die. But it’s awkward, and we decided to help it change. One dice at a time!)

Source: <https://core.telegram.org/bots/api#senddice>

Parameters

- **emoji** (`typing.Union[base.String, None]`) – Emoji on which the dice throw animation is based. Currently, must be one of “” or “”. Defaults to “”
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound.

- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, types.ReplyKeyboardMarkup, types.ReplyKeyboardRemove, types.ForceReply, None]`) – Additional interface options. A JSON-serialized object for an inline keyboard, custom reply keyboard, instructions to remove reply keyboard or to force a reply from the user
- **reply** – fill ‘reply_to_message_id’

Returns On success, the sent Message is returned.

Return type `types.Message`

async forward (*chat_id: Union[Integer, String], disable_notification: Optional[Boolean] = None*)
 → *aiogram.types.message.Message*

Forward this message

Source: <https://core.telegram.org/bots/api#forwardmessage>

Parameters

- **chat_id** (`typing.Union[base.Integer, base.String]`) – Unique identifier for the target chat or username of the target channel
- **disable_notification** (`typing.Union[base.Boolean, None]`) – Sends the message silently. Users will receive a notification with no sound

Returns On success, the sent Message is returned

Return type `types.Message`

async edit_text (*text: String, parse_mode: Optional[String] = None, disable_web_page_preview: Optional[Boolean] = None, reply_markup: Optional[aiogram.types.inline_keyboard.InlineKeyboardMarkup] = None*) →
 Union[*aiogram.types.message.Message*, Boolean]

Use this method to edit text and game messages sent by the bot or via the bot (for inline bots).

Source: <https://core.telegram.org/bots/api#editmessagetext>

Parameters

- **text** (`base.String`) – New text of the message
- **parse_mode** (`typing.Union[base.String, None]`) – Send Markdown or HTML, if you want Telegram apps to show bold, italic, fixed-width text or inline URLs in your bot’s message.
- **disable_web_page_preview** (`typing.Union[base.Boolean, None]`) – Disables link previews for links in this message
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, None]`) – A JSON-serialized object for an inline keyboard.

Returns On success, if edited message is sent by the bot, the edited Message is returned, otherwise True is returned.

Return type `typing.Union[types.Message, base.Boolean]`

async edit_caption (*caption: String, parse_mode: Optional[String] = None, reply_markup: Optional[aiogram.types.inline_keyboard.InlineKeyboardMarkup] = None*) →
 Union[*aiogram.types.message.Message*, Boolean]

Use this method to edit captions of messages sent by the bot or via the bot (for inline bots).

Source: <https://core.telegram.org/bots/api#editmessagecaption>

Parameters

- **caption** (`typing.Union[base.String, None]`) – New caption of the message
- **parse_mode** (`typing.Union[base.String, None]`) – Send Markdown or HTML, if you want Telegram apps to show bold, italic, fixed-width text or inline URLs in your bot’s message.
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, None]`) – A JSON-serialized object for an inline keyboard

Returns On success, if edited message is sent by the bot, the edited Message is returned, otherwise True is returned.

Return type `typing.Union[types.Message, base.Boolean]`

async edit_media (*media*: `aiogram.types.input_media.InputMedia`, *reply_markup*: `Optional[aiogram.types.inline_keyboard.InlineKeyboardMarkup]` = `None`) → `Union[aiogram.types.message.Message, Boolean]`

Use this method to edit audio, document, photo, or video messages. If a message is a part of a message album, then it can be edited only to a photo or a video. Otherwise, message type can be changed arbitrarily. When inline message is edited, new file can’t be uploaded. Use previously uploaded file via its `file_id` or specify a URL.

On success, if the edited message was sent by the bot, the edited Message is returned, otherwise True is returned.

Source <https://core.telegram.org/bots/api#editmessagemedia>

Parameters

- **media** (`types.InputMedia`) – A JSON-serialized object for a new media content of the message
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, None]`) – A JSON-serialized object for a new inline keyboard

Returns On success, if the edited message was sent by the bot, the edited Message is returned, otherwise True is returned

Return type `typing.Union[types.Message, base.Boolean]`

async edit_reply_markup (*reply_markup*: `Optional[aiogram.types.inline_keyboard.InlineKeyboardMarkup]` = `None`) → `Union[aiogram.types.message.Message, Boolean]`

Use this method to edit only the reply markup of messages sent by the bot or via the bot (for inline bots).

Source: <https://core.telegram.org/bots/api#editmessagereplymarkup>

Parameters **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, None]`) – A JSON-serialized object for an inline keyboard

Returns On success, if edited message is sent by the bot, the edited Message is returned, otherwise True is returned.

Return type `typing.Union[types.Message, base.Boolean]`

async delete_reply_markup () → `Union[aiogram.types.message.Message, Boolean]`

Use this method to delete reply markup of messages sent by the bot or via the bot (for inline bots).

Returns On success, if edited message is sent by the bot, the edited Message is returned, otherwise True is returned.

Return type `typing.Union[types.Message, base.Boolean]`

async edit_live_location (*latitude: Float, longitude: Float, reply_markup: Optional[aiogram.types.inline_keyboard.InlineKeyboardMarkup] = None*) → Union[*aiogram.types.message.Message*, Boolean]

Use this method to edit live location messages sent by the bot or via the bot (for inline bots). A location can be edited until its `live_period` expires or editing is explicitly disabled by a call to `stopMessageLiveLocation`.

Source: <https://core.telegram.org/bots/api#editmessagelivelocation>

Parameters

- **latitude** (`base.Float`) – Latitude of new location
- **longitude** (`base.Float`) – Longitude of new location
- **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, None]`) – A JSON-serialized object for a new inline keyboard.

Returns On success, if the edited message was sent by the bot, the edited `Message` is returned, otherwise `True` is returned.

Return type `typing.Union[types.Message, base.Boolean]`

async stop_live_location (*reply_markup: Optional[aiogram.types.inline_keyboard.InlineKeyboardMarkup] = None*) → Union[*aiogram.types.message.Message*, Boolean]

Use this method to stop updating a live location message sent by the bot or via the bot (for inline bots) before `live_period` expires.

Source: <https://core.telegram.org/bots/api#stopmessagelivelocation>

Parameters **reply_markup** (`typing.Union[types.InlineKeyboardMarkup, None]`) – A JSON-serialized object for a new inline keyboard.

Returns On success, if the message was sent by the bot, the sent `Message` is returned, otherwise `True` is returned.

Return type `typing.Union[types.Message, base.Boolean]`

async delete () → Boolean

Use this method to delete a message, including service messages, with the following limitations: - A message can only be deleted if it was sent less than 48 hours ago. - Bots can delete outgoing messages in private chats, groups, and supergroups. - Bots can delete incoming messages in private chats. - Bots granted `can_post_messages` permissions can delete outgoing messages in channels. - If the bot is an administrator of a group, it can delete any message there. - If the bot has `can_delete_messages` permission in a supergroup or a channel, it can delete any message there.

Source: <https://core.telegram.org/bots/api#deletemessage>

Returns Returns `True` on success

Return type `base.Boolean`

async pin (*disable_notification: Optional[Boolean] = None*) → Boolean

Use this method to pin a message in a supergroup. The bot must be an administrator in the chat for this to work and must have the appropriate admin rights.

Source: <https://core.telegram.org/bots/api#pinchatmessage>

Parameters **disable_notification** (`typing.Union[base.Boolean, None]`) – Pass `True`, if it is not necessary to send a notification to all group members about the new pinned message

Returns Returns `True` on success

Return type `base.Boolean`

```
async send_copy (chat_id: Union[str, int], disable_notification: Optional[bool] = None,  
reply_to_message_id: Optional[int] = None, reply_markup: Op-  
tional[Union[aiogram.types.inline_keyboard.InlineKeyboardMarkup,  
aiogram.types.reply_keyboard.ReplyKeyboardMarkup]] = None) →  
aiogram.types.message.Message
```

Send copy of current message

Parameters

- **chat_id** –
- **disable_notification** –
- **reply_to_message_id** –
- **reply_markup** –

Returns

ContentType

```
class aiogram.types.message.ContentType
```

Bases: aiogram.utils.helper.Helper

List of message content types

WARNING: Single elements

Parse modes

Key MARKDOWN

Key HTML

MaskPosition

class aiogram.types.mask_position.**MaskPosition** (*conf: Optional[Dict[str, Any]] = None, **kwargs: Any*)

Bases: *aiogram.types.base.TelegramObject*

This object describes the position on faces where a mask should be placed by default.

<https://core.telegram.org/bots/api#maskposition>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

UserProfilePhotos

class aiogram.types.user_profile_photos.**UserProfilePhotos** (*conf: Optional[Dict[str, Any]] = None, **kwargs: Any*)

Bases: *aiogram.types.base.TelegramObject*

This object represent a user's profile pictures.

<https://core.telegram.org/bots/api#userprofilephotos>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

Invoice

class aiogram.types.invoice.**Invoice** (*conf: Optional[Dict[str, Any]] = None, **kwargs: Any*)

Bases: *aiogram.types.base.TelegramObject*

This object contains basic information about an invoice.

<https://core.telegram.org/bots/api#invoice>

Deserialize object

Parameters

- **conf** –
- **kwargs** –

AuthWidgetData

class aiogram.types.auth_widget_data.**AuthWidgetData** (*conf: Optional[Dict[str, Any]] = None, **kwargs: Any*)

Bases: *aiogram.types.base.TelegramObject*

Deserialize object

Parameters

- **conf** –
- **kwargs** –

classmethod **parse** (*request: aiohttp.web_request.Request*) → *aiogram.types.auth_widget_data.AuthWidgetData*

Parse request as Telegram auth widget data.

Parameters **request** –

Returns *AuthWidgetData*

Raise *aiohttp.web.HTTPBadRequest*

4.5 Dispatcher

4.5.1 Filters

Basics

Filter factory greatly simplifies the reuse of filters when registering handlers.

Filters factory

class aiogram.dispatcher.filters.factory.**FiltersFactory** (*dispatcher*)

Bases: *object*

Filters factory

bind (*callback: Union[Callable, aiogram.dispatcher.filters.filters.AbstractFilter], validator: Optional[Callable] = None, event_handlers: Optional[List[aiogram.dispatcher.handler.Handler]] = None, exclude_event_handlers: Optional[Iterable[aiogram.dispatcher.handler.Handler]] = None*)

Register filter

Parameters

- **callback** – callable or subclass of *AbstractFilter*
- **validator** – custom validator.
- **event_handlers** – list of instances of *Handler*
- **exclude_event_handlers** – list of excluded event handlers (*Handler*)

unbind (*callback: Union[Callable, aiogram.dispatcher.filters.filters.AbstractFilter]*)

Unregister callback

Parameters **callback** – callable of subclass of *AbstractFilter*

```
resolve (event_handler, *custom_filters, **full_config) → List[Union[Callable,
    aiogram.dispatcher.filters.filters.AbstractFilter]]
Resolve filters to filters-set
```

Parameters

- **event_handler** –
- **custom_filters** –
- **full_config** –

Returns**Builtin filters**

aiogram has some builtin filters. Here you can see all of them:

Command

```
class aiogram.dispatcher.filters.builtin.Command (commands: Union[Iterable, str], pre-
    fixes: Union[Iterable, str] = '/',
    ignore_case: bool = True, ig-
    nore_mention: bool = False)
```

Bases: *aiogram.dispatcher.filters.filters.Filter*

You can handle commands by using this filter.

If filter is successful processed the *Command.CommandObj* will be passed to the handler arguments.

By default this filter is registered for messages and edited messages handlers.

Filter can be initialized from filters factory or by simply creating instance of this class.

Examples:

```
@dp.message_handler (commands= ['myCommand' ])
@dp.message_handler (Command ( ['myCommand' ]))
@dp.message_handler (commands= ['myCommand' ], commands_prefix='!/')
```

Parameters

- **commands** – Command or list of commands always without leading slashes (prefix)
- **prefixes** – Allowed commands prefix. By default is slash. If you change the default behavior pass the list of prefixes to this argument.
- **ignore_case** – Ignore case of the command
- **ignore_mention** – Ignore mention in command (By default this filter pass only the commands addressed to current bot)

```
classmethod validate (full_config: Dict[str, Any]) → Optional[Dict[str, Any]]
```

Validator for filters factory

From filters factory this filter can be registered with arguments:

- `command`
- `commands_prefix` (will be passed as `prefixes`)
- `commands_ignore_mention` (will be passed as `ignore_mention`)

Parameters `full_config` –

Returns config or empty dict

async check (*message*: `aiogram.types.message.Message`)

Will be called when filters checks.

This method must be overridden.

Parameters `args` –

Returns

class CommandObj (*prefix*: `str = '/'`, *command*: `str = ''`, *mention*: `str = None`, *args*: `str = None`)

Bases: `object`

Instance of this object is always has command and it prefix.

Can be passed as keyword argument `command` to the handler

Instance of this object is always has command and it prefix.

Can be passed as keyword argument `command` to the handler

prefix: `str = '/'`

Command without prefix and mention

command: `str = ''`

Mention (if available)

mention: `str = None`

Command argument

args: `str = None`

property mentioned

This command has mention?

Returns

property text

Generate original text from object

Returns

CommandStart

class `aiogram.dispatcher.filters.builtin.CommandStart` (*deep_link*: *Optional*[*Union*[*str*, *Pattern*[*str*]]] = *None*, *encoded*: *bool* = *False*)

Bases: `aiogram.dispatcher.filters.builtin.Command`

This filter based on `Command` filter but can handle only `/start` command.

Also this filter can handle `deep-linking` arguments.

Example:

```
@dp.message_handler(CommandStart(re.compile(r'ref-([\d]+)')))
```

Parameters

- `deep_link` – string or compiled regular expression (by `re.compile(...)`).

- **encoded** – set True if you're waiting for encoded payload (default - False).

async check (*message*: `aiogram.types.message.Message`)

If deep-linking is passed to the filter result of the matching will be passed as `deep_link` to the handler

Parameters `message` –

Returns

CommandHelp

class `aiogram.dispatcher.filters.builtin.CommandHelp`

Bases: `aiogram.dispatcher.filters.builtin.Command`

This filter based on `Command` filter but can handle only `/help` command.

Filter can be initialized from filters factory or by simply creating instance of this class.

Examples:

```
@dp.message_handler(commands=['myCommand'])
@dp.message_handler(Command(['myCommand']))
@dp.message_handler(commands=['myCommand'], commands_prefix='!/')
```

Parameters

- **commands** – Command or list of commands always without leading slashes (prefix)
- **prefixes** – Allowed commands prefix. By default is slash. If you change the default behavior pass the list of prefixes to this argument.
- **ignore_case** – Ignore case of the command
- **ignore_mention** – Ignore mention in command (By default this filter pass only the commands addressed to current bot)

CommandSettings

class `aiogram.dispatcher.filters.builtin.CommandSettings`

Bases: `aiogram.dispatcher.filters.builtin.Command`

This filter based on `Command` filter but can handle only `/settings` command.

Filter can be initialized from filters factory or by simply creating instance of this class.

Examples:

```
@dp.message_handler(commands=['myCommand'])
@dp.message_handler(Command(['myCommand']))
@dp.message_handler(commands=['myCommand'], commands_prefix='!/')
```

Parameters

- **commands** – Command or list of commands always without leading slashes (prefix)
- **prefixes** – Allowed commands prefix. By default is slash. If you change the default behavior pass the list of prefixes to this argument.
- **ignore_case** – Ignore case of the command

- **ignore_mention** – Ignore mention in command (By default this filter pass only the commands addressed to current bot)

CommandPrivacy

class aiogram.dispatcher.filters.builtin.**CommandPrivacy**

Bases: *aiogram.dispatcher.filters.builtin.Command*

This filter based on *Command* filter but can handle only /privacy command.

Filter can be initialized from filters factory or by simply creating instance of this class.

Examples:

```
@dp.message_handler(commands=['myCommand'])
@dp.message_handler(Command(['myCommand']))
@dp.message_handler(commands=['myCommand'], commands_prefix='!/')
```

Parameters

- **commands** – Command or list of commands always without leading slashes (prefix)
- **prefixes** – Allowed commands prefix. By default is slash. If you change the default behavior pass the list of prefixes to this argument.
- **ignore_case** – Ignore case of the command
- **ignore_mention** – Ignore mention in command (By default this filter pass only the commands addressed to current bot)

Text

```
class aiogram.dispatcher.filters.builtin.Text (equals: Optional[Union[str,
babel.support.LazyProxy,
Iterable[Union[str,
babel.support.LazyProxy]]]] = None,
contains: Optional[Union[str,
babel.support.LazyProxy,
Iterable[Union[str,
babel.support.LazyProxy]]]] = None,
startswith: Optional[Union[str,
babel.support.LazyProxy,
Iterable[Union[str,
babel.support.LazyProxy]]]] = None,
endswith: Optional[Union[str,
babel.support.LazyProxy,
Iterable[Union[str,
babel.support.LazyProxy]]]] = None,
ignore_case=False)
```

Bases: *aiogram.dispatcher.filters.filters.Filter*

Simple text filter

Check text for one of pattern. Only one mode can be used in one filter. In every pattern, a single string is treated as a list with 1 element.

Parameters

- **equals** – True if object's text in the list
- **contains** – True if object's text contains all strings from the list
- **startswith** – True if object's text starts with any of strings from the list
- **endswith** – True if object's text ends with any of strings from the list
- **ignore_case** – case insensitive

classmethod validate (*full_config: Dict[str, Any]*)

Here method `validate` is optional. If you need to use filter from filters factory you need to override this method.

Parameters full_config – dict with arguments passed to handler registrar

Returns Current filter config

async check (*obj: Union[aiogram.types.message.Message, aiogram.types.callback_query.CallbackQuery, aiogram.types.inline_query.InlineQuery, aiogram.types.poll.Poll]*)

Will be called when filters checks.

This method must be overridden.

Parameters args –

Returns

HashTag

class `aiogram.dispatcher.filters.builtin.HashTag` (*hashtags=None, cashtags=None*)

Bases: `aiogram.dispatcher.filters.filters.Filter`

Filter for hashtag's and cashtag's

classmethod validate (*full_config: Dict[str, Any]*)

Here method `validate` is optional. If you need to use filter from filters factory you need to override this method.

Parameters full_config – dict with arguments passed to handler registrar

Returns Current filter config

async check (*message: aiogram.types.message.Message*)

Will be called when filters checks.

This method must be overridden.

Parameters args –

Returns

Regexp

class `aiogram.dispatcher.filters.builtin.Regexp` (*regexp*)

Bases: `aiogram.dispatcher.filters.filters.Filter`

Regexp filter for messages and callback query

classmethod validate (*full_config: Dict[str, Any]*)

Here method `validate` is optional. If you need to use filter from filters factory you need to override this method.

Parameters `full_config` – dict with arguments passed to handler registrar

Returns Current filter config

async check (*obj*: Union[aiogram.types.message.Message, aiogram.types.callback_query.CallbackQuery, aiogram.types.inline_query.InlineQuery, aiogram.types.poll.Poll])

Will be called when filters checks.

This method must be overridden.

Parameters `args` –

Returns

RegexpCommandsFilter

class aiogram.dispatcher.filters.builtin.RegexpCommandsFilter (*regexp_commands*)

Bases: *aiogram.dispatcher.filters.filters.BoundFilter*

Check commands by regexp in message

async check (*message*)

Will be called when filters checks.

This method must be overridden.

Parameters `args` –

Returns

ContentTypeFilter

class aiogram.dispatcher.filters.builtin.ContentTypeFilter (*content_types*)

Bases: *aiogram.dispatcher.filters.filters.BoundFilter*

Check message content type

async check (*message*)

Will be called when filters checks.

This method must be overridden.

Parameters `args` –

Returns

IsSenderContact

class aiogram.dispatcher.filters.builtin.IsSenderContact (*is_sender_contact: bool*)

Bases: *aiogram.dispatcher.filters.filters.BoundFilter*

Filter check that the contact matches the sender

is_sender_contact=True - contact matches the sender *is_sender_contact=False* - result will be inverted

async check (*message*: aiogram.types.message.Message) → bool

Will be called when filters checks.

This method must be overridden.

Parameters `args` –

Returns

StateFilter

class aiogram.dispatcher.filters.builtin.**StateFilter** (*dispatcher, state*)

Bases: *aiogram.dispatcher.filters.filters.BoundFilter*

Check user state

async check (*obj*)

Will be called when filters checks.

This method must be overridden.

Parameters *args* –

Returns

ExceptionsFilter

class aiogram.dispatcher.filters.builtin.**ExceptionsFilter** (*exception*)

Bases: *aiogram.dispatcher.filters.filters.BoundFilter*

Filter for exceptions

async check (*update, exception*)

Will be called when filters checks.

This method must be overridden.

Parameters *args* –

Returns

IDFilter

class aiogram.dispatcher.filters.builtin.**IDFilter** (*user_id: Optional[Union[Iterable[Union[int, str]], str, int]] = None, chat_id: Optional[Union[Iterable[Union[int, str]], str, int]] = None*)

Bases: *aiogram.dispatcher.filters.filters.Filter*

Parameters

- **user_id** –
- **chat_id** –

classmethod validate (*full_config: Dict[str, Any]*) → Optional[Dict[str, Any]]

Here method `validate` is optional. If you need to use filter from filters factory you need to override this method.

Parameters **full_config** – dict with arguments passed to handler registrar

Returns Current filter config

async check (*obj*: Union[aiogram.types.message.Message, aiogram.types.callback_query.CallbackQuery, aiogram.types.inline_query.InlineQuery])

Will be called when filters checks.

This method must be overridden.

Parameters args –

Returns

AdminFilter

class aiogram.dispatcher.filters.builtin.**AdminFilter** (*is_chat_admin*: Optional[Union[Iterable[Union[int, str]], str, int, bool]] = None)

Bases: *aiogram.dispatcher.filters.filters.Filter*

Checks if user is admin in a chat. If *is_chat_admin* is not set, the filter will check in the current chat (correct only for messages). *is_chat_admin* is required for *InlineQuery*.

classmethod validate (*full_config*: Dict[str, Any]) → Optional[Dict[str, Any]]

Here method *validate* is optional. If you need to use filter from filters factory you need to override this method.

Parameters full_config – dict with arguments passed to handler registrar

Returns Current filter config

async check (*obj*: Union[aiogram.types.message.Message, aiogram.types.callback_query.CallbackQuery, aiogram.types.inline_query.InlineQuery]) → bool

Will be called when filters checks.

This method must be overridden.

Parameters args –

Returns

IsReplyFilter

ForwardedMessageFilter

Making own filters (Custom filters)

Own filter can be:

- any callable object
- any async function
- any anonymous function (Example: `lambda msg: msg.text == 'spam'`)
- Subclass of `AbstractFilter`, `Filter` or `BoundFilter`

AbstractFilter

class aiogram.dispatcher.filters.filters.**AbstractFilter**

Bases: abc.ABC

Abstract class for custom filters.

abstract classmethod validate (*full_config: Dict[str, Any]*) → Optional[Dict[str, Any]]
Validate and parse config.

This method will be called by the filters factory when you bind this filter. Must be overridden.

Parameters **full_config** – dict with arguments passed to handler registrar

Returns Current filter config

abstract async check (**args*) → bool
Will be called when filters checks.

This method must be overridden.

Parameters **args** –

Returns

Filter

class aiogram.dispatcher.filters.filters.**Filter**

Bases: *aiogram.dispatcher.filters.filters.AbstractFilter*

You can make subclasses of that class for custom filters.

Method check must be overridden

classmethod validate (*full_config: Dict[str, Any]*) → Optional[Dict[str, Any]]

Here method `validate` is optional. If you need to use filter from filters factory you need to override this method.

Parameters **full_config** – dict with arguments passed to handler registrar

Returns Current filter config

BoundFilter

class aiogram.dispatcher.filters.filters.**BoundFilter**

Bases: *aiogram.dispatcher.filters.filters.Filter*

To easily create your own filters with one parameter, you can inherit from this filter.

You need to implement `__init__` method with single argument related with key attribute and `check` method where you need to implement filter logic.

key = None

Unique name of the filter argument. You need to override this attribute.

required = False

If `True` this filter will be added to the all of the registered handlers

default = None

Default value for configure required filters

classmethod validate (*full_config: Dict[str, Any]*) → Dict[str, Any]

If `cls.key` is not None and that is in config returns config with that argument.

Parameters `full_config` –

Returns

```
class ChatIdFilter(BoundFilter):
    key = 'chat_id'

    def __init__(self, chat_id: typing.Union[typing.Iterable, int]):
        if isinstance(chat_id, int):
            chat_id = [chat_id]
        self.chat_id = chat_id

    def check(self, message: types.Message) -> bool:
        return message.chat.id in self.chat_id

dp.filters_factory.bind(ChatIdFilter, event_handlers=[dp.message_handlers])
```

class aiogram.Dispatcher (bot, loop=None, storage: Optional[aiogram.dispatcher.storage.BaseStorage]
                          = None, run_tasks_by_default: bool = False, throttling_rate_limit=0.1,
                          no_throttle_error=False, filters_factory=None)
```

```
Bases:          aiogram.utils.mixins.DataMixin,          aiogram.utils.mixins.
ContextInstanceMixin
```

Simple Updates dispatcher

It will process incoming updates: messages, edited messages, channel posts, edited channel posts, inline queries, chosen inline results, callback queries, shipping queries, pre-checkout queries.

async skip_updates ()

You can skip old incoming updates from queue. This method is not recommended to use if you use payments or you bot has high-load.

Returns None

async process_updates (updates, fast: Optional[bool] = True)

Process list of updates

Parameters

- **updates** –
- **fast** –

Returns

async process_update (*update: aiogram.types.update.Update*)

Process single update object

Parameters update –**Returns**

async reset_webhook (*check=True*) → bool

Reset webhook

Parameters check – check before deleting

Returns

async start_polling (*timeout=20, relax=0.1, limit=None, reset_webhook=None, fast: Optional[bool] = True, error_sleep: int = 5*)

Start long-polling

Parameters

- **timeout** –
- **relax** –
- **limit** –
- **reset_webhook** –
- **fast** –

Returns

stop_polling ()

Break long-polling process.

Returns

async wait_closed ()

Wait for the long-polling to close

Returns

is_polling ()

Check if polling is enabled

Returns

register_message_handler (*callback, *custom_filters, commands=None, regexp=None, content_types=None, state=None, run_task=None, **kwargs*)

Register handler for message

```
# This handler works only if state is None (by default).
dp.register_message_handler(cmd_start, commands=['start', 'about'])
dp.register_message_handler(entry_point, commands=['setup'])

# This handler works only if current state is "first_step"
dp.register_message_handler(step_handler_1, state="first_step")

# If you want to handle all states by one handler, use `state="*"`.

```

(continues on next page)

(continued from previous page)

```
dp.register_message_handler(cancel_handler, commands=['cancel'], state="*")
dp.register_message_handler(cancel_handler, lambda msg: msg.text.lower() ==
↳ 'cancel', state="*")
```

Parameters

- **callback** –
- **commands** – list of commands
- **regex** – REGEXP
- **content_types** – List of content types.
- **custom_filters** – list of custom filters
- **kwargs** –
- **state** –

Returns decorated function

message_handler (*custom_filters, commands=None, regex=None, content_types=None, state=None, run_task=None, **kwargs)
Decorator for message handler

Examples:

Simple commands handler:

```
@dp.message_handler(commands=['start', 'welcome', 'about'])
async def cmd_handler(message: types.Message):
```

Filter messages by regular expression:

```
@dp.message_handler(regex='^[a-z]+-[0-9]+')
async def msg_handler(message: types.Message):
```

Filter messages by command regular expression:

```
@dp.message_handler(filters.RegexpCommandsFilter(regex_commands=['item_([0-9]+)']))
async def send_welcome(message: types.Message):
```

Filter by content type:

```
@dp.message_handler(content_types=ContentType.PHOTO | ContentType.DOCUMENT)
async def audio_handler(message: types.Message):
```

Filter by custom function:

```
@dp.message_handler(lambda message: message.text and 'hello' in message.text.lower())
async def text_handler(message: types.Message):
```

Use multiple filters:

```
@dp.message_handler(commands=['command'], content_types=ContentType.TEXT)
async def text_handler(message: types.Message):
```

Register multiple filters set for one handler:

```
@dp.message_handler(commands=['command'])
@dp.message_handler(lambda message: demojize(message.text) == ':new_moon_with_
↔face:')
async def text_handler(message: types.Message):
```

This handler will be called if the message starts with '/command' OR is some emoji

By default content_type is ContentType.TEXT

Parameters

- **commands** – list of commands
- **regexp** – REGEXP
- **content_types** – List of content types.
- **custom_filters** – list of custom filters
- **kwargs** –
- **state** –
- **run_task** – run callback in task (no wait results)

Returns decorated function

```
register_edited_message_handler (callback, *custom_filters, commands=None, reg-
exp=None, content_types=None, state=None,
run_task=None, **kwargs)
```

Register handler for edited message

Parameters

- **callback** –
- **commands** – list of commands
- **regexp** – REGEXP
- **content_types** – List of content types.
- **state** –
- **custom_filters** – list of custom filters
- **run_task** – run callback in task (no wait results)
- **kwargs** –

Returns decorated function

```
edited_message_handler (*custom_filters, commands=None, regexp=None, content_types=None,
state=None, run_task=None, **kwargs)
```

Decorator for edited message handler

You can use combination of different handlers

```
@dp.message_handler()
@dp.edited_message_handler()
async def msg_handler(message: types.Message):
```

Parameters

- **commands** – list of commands

- **regexp** – REGEXP
- **content_types** – List of content types.
- **state** –
- **custom_filters** – list of custom filters
- **run_task** – run callback in task (no wait results)
- **kwargs** –

Returns decorated function

register_channel_post_handler (*callback, *custom_filters, commands=None, regexp=None, content_types=None, state=None, run_task=None, **kwargs*)

Register handler for channel post

Parameters

- **callback** –
- **commands** – list of commands
- **regexp** – REGEXP
- **content_types** – List of content types.
- **state** –
- **custom_filters** – list of custom filters
- **run_task** – run callback in task (no wait results)
- **kwargs** –

Returns decorated function

channel_post_handler (**custom_filters, commands=None, regexp=None, content_types=None, state=None, run_task=None, **kwargs*)

Decorator for channel post handler

Parameters

- **commands** – list of commands
- **regexp** – REGEXP
- **content_types** – List of content types.
- **state** –
- **custom_filters** – list of custom filters
- **run_task** – run callback in task (no wait results)
- **kwargs** –

Returns decorated function

register_edited_channel_post_handler (*callback, *custom_filters, commands=None, regexp=None, content_types=None, state=None, run_task=None, **kwargs*)

Register handler for edited channel post

Parameters

- **callback** –

- **commands** – list of commands
- **regexp** – REGEXP
- **content_types** – List of content types.
- **state** –
- **custom_filters** – list of custom filters
- **run_task** – run callback in task (no wait results)
- **kwargs** –

Returns decorated function

edited_channel_post_handler (**custom_filters*, *commands=None*, *regexp=None*, *content_types=None*, *state=None*, *run_task=None*, ****kwargs**)

Decorator for edited channel post handler

Parameters

- **commands** – list of commands
- **regexp** – REGEXP
- **content_types** – List of content types.
- **custom_filters** – list of custom filters
- **state** –
- **run_task** – run callback in task (no wait results)
- **kwargs** –

Returns decorated function

register_inline_handler (*callback*, **custom_filters*, *state=None*, *run_task=None*, ****kwargs**)

Register handler for inline query

Example:

```
dp.register_inline_handler(some_inline_handler, lambda inline_query: True)
```

Parameters

- **callback** –
- **custom_filters** – list of custom filters
- **state** –
- **run_task** – run callback in task (no wait results)
- **kwargs** –

Returns decorated function

inline_handler (**custom_filters*, *state=None*, *run_task=None*, ****kwargs**)

Decorator for inline query handler

Example:

```
@dp.inline_handler(lambda inline_query: True)
async def some_inline_handler(inline_query: types.InlineQuery)
```

Parameters

- **state** –
- **custom_filters** – list of custom filters
- **run_task** – run callback in task (no wait results)
- **kwargs** –

Returns decorated function

register_chosen_inline_handler (*callback*, **custom_filters*, *state=None*, *run_task=None*, ***kwargs*)

Register handler for chosen inline query

Example:

```
dp.register_chosen_inline_handler(some_chosen_inline_handler, lambda chosen_
↳ inline_query: True)
```

Parameters

- **callback** –
- **state** –
- **custom_filters** –
- **run_task** – run callback in task (no wait results)
- **kwargs** –

Returns

chosen_inline_handler (**custom_filters*, *state=None*, *run_task=None*, ***kwargs*)

Decorator for chosen inline query handler

Example:

```
@dp.chosen_inline_handler(lambda chosen_inline_query: True)
async def some_chosen_inline_handler(chosen_inline_query: types.
↳ ChosenInlineResult)
```

Parameters

- **state** –
- **custom_filters** –
- **run_task** – run callback in task (no wait results)
- **kwargs** –

Returns

register_callback_query_handler (*callback*, **custom_filters*, *state=None*, *run_task=None*, ***kwargs*)

Register handler for callback query

Example:

```
dp.register_callback_query_handler(some_callback_handler, lambda callback_
↳ query: True)
```

Parameters

- **callback** –
- **state** –
- **custom_filters** –
- **run_task** – run callback in task (no wait results)
- **kwargs** –

callback_query_handler (**custom_filters, state=None, run_task=None, **kwargs*)

Decorator for callback query handler

Example:

```
@dp.callback_query_handler(lambda callback_query: True)
async def some_callback_handler(callback_query: types.CallbackQuery)
```

Parameters

- **state** –
- **custom_filters** –
- **run_task** – run callback in task (no wait results)
- **kwargs** –

register_shipping_query_handler (*callback, *custom_filters, state=None, run_task=None, **kwargs*)

Register handler for shipping query

Example:

```
dp.register_shipping_query_handler(some_shipping_query_handler, lambda_
↳shipping_query: True)
```

Parameters

- **callback** –
- **state** –
- **custom_filters** –
- **run_task** – run callback in task (no wait results)
- **kwargs** –

shipping_query_handler (**custom_filters, state=None, run_task=None, **kwargs*)

Decorator for shipping query handler

Example:

```
@dp.shipping_query_handler(lambda shipping_query: True)
async def some_shipping_query_handler(shipping_query: types.ShippingQuery)
```

Parameters

- **state** –

- **custom_filters** –
- **run_task** – run callback in task (no wait results)
- **kwargs** –

register_pre_checkout_query_handler (*callback*, **custom_filters*, *state=None*, *run_task=None*, ***kwargs*)

Register handler for pre-checkout query

Example:

```
dp.register_pre_checkout_query_handler(some_pre_checkout_query_handler, λ
↪ lambda shipping_query: True)
```

Parameters

- **callback** –
- **state** –
- **custom_filters** –
- **run_task** – run callback in task (no wait results)
- **kwargs** –

pre_checkout_query_handler (**custom_filters*, *state=None*, *run_task=None*, ***kwargs*)

Decorator for pre-checkout query handler

Example:

```
@dp.pre_checkout_query_handler(lambda shipping_query: True)
async def some_pre_checkout_query_handler(shipping_query: types.ShippingQuery)
```

Parameters

- **state** –
- **custom_filters** –
- **run_task** – run callback in task (no wait results)
- **kwargs** –

register_poll_handler (*callback*, **custom_filters*, *run_task=None*, ***kwargs*)

Register handler for poll

Example:

```
dp.register_poll_handler(some_poll_handler)
```

Parameters

- **callback** –
- **custom_filters** –
- **run_task** – run callback in task (no wait results)
- **kwargs** –

poll_handler (**custom_filters, run_task=None, **kwargs*)
 Decorator for poll handler

Example:

```
@dp.poll_handler()
async def some_poll_handler(poll: types.Poll)
```

Parameters

- **custom_filters** –
- **run_task** – run callback in task (no wait results)
- **kwargs** –

register_poll_answer_handler (*callback, *custom_filters, run_task=None, **kwargs*)
 Register handler for poll_answer

Example:

```
dp.register_poll_answer_handler(some_poll_answer_handler)
```

Parameters

- **callback** –
- **custom_filters** –
- **run_task** – run callback in task (no wait results)
- **kwargs** –

poll_answer_handler (**custom_filters, run_task=None, **kwargs*)
 Decorator for poll_answer handler

Example:

```
@dp.poll_answer_handler()
async def some_poll_answer_handler(poll_answer: types.PollAnswer)
```

Parameters

- **custom_filters** –
- **run_task** – run callback in task (no wait results)
- **kwargs** –

register_errors_handler (*callback, *custom_filters, exception=None, run_task=None, **kwargs*)

Register handler for errors

Parameters

- **callback** –
- **exception** – you can make handler for specific errors type
- **run_task** – run callback in task (no wait results)

errors_handler (**custom_filters, exception=None, run_task=None, **kwargs*)
 Decorator for errors handler

Parameters

- **exception** – you can make handler for specific errors type
- **run_task** – run callback in task (no wait results)

Returns

current_state (*, chat: *Optional[Union[str, int]] = None*, user: *Optional[Union[str, int]] = None*)
 → aiogram.dispatcher.storage.FSMContext
 Get current state for user in chat as context

```
with dp.current_state(chat=message.chat.id, user=message.user.id) as state:
    pass

state = dp.current_state()
state.set_state('my_state')
```

Parameters

- **chat** –
- **user** –

Returns

async throttle (**kwargs) → bool
 Execute throttling manager. Returns True if limit has not exceeded otherwise raises ThrottleError or returns False

Parameters

- **key** – key in storage
- **rate** – limit (by default is equal to default rate limit)
- **user_id** – user id
- **chat_id** – chat id
- **no_error** – return boolean value instead of raising error

Returns bool

async check_key (**kwargs)
 Get information about key in bucket

Parameters

- **key** –
- **chat_id** –
- **user_id** –

Returns

async release_key (**kwargs)
 Release blocked key

Parameters

- **key** –
- **chat_id** –
- **user_id** –

Returns**async_task** (*func*)

Execute handler as task and return None. Use this decorator for slow handlers (with timeouts)

```
@dp.message_handler(commands=['command'])
@dp.async_task
async def cmd_with_timeout(message: types.Message):
    await asyncio.sleep(120)
    return SendMessage(message.chat.id, 'KABOOM').reply(message)
```

Parameters *func* –**Returns**

throttled (*on_throttled: Optional[Callable] = None, key=None, rate=None, user_id=None, chat_id=None*)

Meta-decorator for throttling. Invokes `on_throttled` if the handler was throttled.

Example:

```
async def handler_throttled(message: types.Message, **kwargs):
    await message.answer("Throttled!")

@dp.throttled(handler_throttled)
async def some_handler(message: types.Message):
    await message.answer("Didn't throttled!")
```

Parameters

- **on_throttled** – the callable object that should be either a function or return a coroutine
- **key** – key in storage
- **rate** – limit (by default is equal to default rate limit)
- **user_id** – user id
- **chat_id** – chat id

Returns decorator

4.6 Utils

4.6.1 Auth Widget

Implementation of Telegram site authorization checking mechanism for more information <https://core.telegram.org/widgets/login#checking-authorization>

Source: <https://gist.github.com/JrooTJunior/887791de7273c9df5277d2b1ecadc839>

`aiogram.utils.auth_widget.generate_hash(*args, **kwargs) → str`

Generate secret hash

Parameters

- **data** –
- **token** –

Returns

`aiogram.utils.auth_widget.check_token(*args, **kwargs) → bool`
Validate auth token

Parameters

- `data` –
- `token` –

Returns

`aiogram.utils.auth_widget.check_signature(token: str, hash: str, **kwargs) → bool`
Generate hexadecimal representation of the HMAC-SHA-256 signature of the data-check-string with the SHA256 hash of the bot's token used as a secret key

Parameters

- `token` –
- `hash` –
- `kwargs` – all params received on auth

Returns

`aiogram.utils.auth_widget.check_integrity(token: str, data: dict) → bool`
Verify the authentication and the integrity of the data received on user's auth

Parameters

- `token` – Bot's token
- `data` – all data that came on auth

Returns

4.6.2 Executor

`aiogram.utils.executor.start_polling(dispatcher, *, loop=None, skip_updates=False, reset_webhook=True, on_startup=None, on_shutdown=None, timeout=20, relax=0.1, fast=True)`

Start bot in long-polling mode

Parameters

- `dispatcher` –
- `loop` –
- `skip_updates` –
- `reset_webhook` –
- `on_startup` –
- `on_shutdown` –
- `timeout` –

```
aiogram.utils.executor.set_webhook(dispatcher: aiogram.dispatcher.dispatcher.Dispatcher,
webhook_path: str, *, loop: Optional[asyncio.events.AbstractEventLoop] = None,
skip_updates: bool = None, on_startup: Optional[Callable] = None, on_shutdown: Optional[Callable] = None,
check_ip: bool = False,
retry_after: Optional[Union[str, int]] = None,
route_name: str = 'webhook_handler', web_app: Optional[aiohttp.web_app.Application] = None)
```

Set webhook for bot

Parameters

- **dispatcher** – Dispatcher
- **webhook_path** – str
- **loop** – Optional[asyncio.AbstractEventLoop] (default: None)
- **skip_updates** – bool (default: None)
- **on_startup** – Optional[Callable] (default: None)
- **on_shutdown** – Optional[Callable] (default: None)
- **check_ip** – bool (default: False)
- **retry_after** – Optional[Union[str, int]] See <https://tools.ietf.org/html/rfc7231#section-7.1.3> (default: None)
- **route_name** – str (default: 'webhook_handler')
- **web_app** – Optional[Application] (default: None)

Returns

```
aiogram.utils.executor.start_webhook(dispatcher, webhook_path, *, loop=None,
skip_updates=None, on_startup=None,
on_shutdown=None, check_ip=False,
retry_after=None, route_name='webhook_handler',
**kwargs)
```

Start bot in webhook mode

Parameters

- **dispatcher** –
- **webhook_path** –
- **loop** –
- **skip_updates** –
- **on_startup** –
- **on_shutdown** –
- **check_ip** –
- **route_name** –
- **kwargs** –

Returns

`aiogram.utils.executor.start` (*dispatcher, future, *, loop=None, skip_updates=None, on_startup=None, on_shutdown=None*)

Execute Future.

Parameters

- **dispatcher** – instance of Dispatcher
- **future** – future
- **loop** – instance of AbstractEventLoop
- **skip_updates** –
- **on_startup** –
- **on_shutdown** –

Returns

class `aiogram.utils.executor.Executor` (*dispatcher, skip_updates=None, check_ip=False, retry_after=None, loop=None*)

Main executor class

set_web_app (*application: aiohttp.web_app.Application*)

Change instance of aiohttp.web.Applicaton

Parameters **application** –

on_startup (*callback: callable, polling=True, webhook=True*)

Register a callback for the startup process

Parameters

- **callback** –
- **polling** – use with polling
- **webhook** – use with webhook

on_shutdown (*callback: callable, polling=True, webhook=True*)

Register a callback for the shutdown process

Parameters

- **callback** –
- **polling** – use with polling
- **webhook** – use with webhook

set_webhook (*webhook_path: Optional[str] = None, request_handler: Any = <class 'aiogram.dispatcher.webhook.WebhookRequestHandler'>, route_name: str = 'webhook_handler', web_app: Optional[aiohttp.web_app.Application] = None*)

Set webhook for bot

Parameters

- **webhook_path** – Optional[str] (default: None)
- **request_handler** – Any (default: WebhookRequestHandler)
- **route_name** – str Name of webhook handler route (default: 'webhook_handler')
- **web_app** – Optional[Application] (default: None)

Returns

start_webhook (*webhook_path=None, request_handler=<class 'aiogram.dispatcher.webhook.WebhookRequestHandler'>, route_name='webhook_handler', **kwargs*)

Start bot in webhook mode

Parameters

- **webhook_path** –
- **request_handler** –
- **route_name** – Name of webhook handler route
- **kwargs** –

Returns

start_polling (*reset_webhook=None, timeout=20, relax=0.1, fast=True*)

Start bot in long-polling mode

Parameters

- **reset_webhook** –
- **timeout** –

start (*future*)

Execute Future.

Return the Future's result, or raise its exception.

Parameters **future** –

Returns

4.6.3 Exceptions

- **TelegramAPIError**
 - **ValidationError**
 - **Throttled**
 - **BadRequest**
 - * **MessageError**
 - **MessageNotModified**
 - **MessageToForwardNotFound**
 - **MessageToDeleteNotFound**
 - **MessageIdentifierNotSpecified**
 - **MessageTextIsEmpty**
 - **MessageCantBeEdited**
 - **MessageCantBeDeleted**
 - **MessageToEditNotFound**
 - **MessageToReplyNotFound**
 - **ToMuchMessages**
 - * **PollError**

- PollCantBeStopped

4.6.4 Markdown

aiogram.utils.markdown.**quote_html** (**content, sep=' '*) → str

Quote HTML symbols

All <, >, & and " symbols that are not a part of a tag or an HTML entity must be replaced with the corresponding HTML entities (< with < > with > & with & and " with ").

Parameters

- **content** –
- **sep** –

Returns

aiogram.utils.markdown.**escape_md** (**content, sep=' '*) → str

Escape markdown text

E.g. for usernames

Parameters

- **content** –
- **sep** –

Returns

aiogram.utils.markdown.**text** (**content, sep=' '*)

Join all elements with a separator

Parameters

- **content** –

- `sep` –

Returns

`aiogram.utils.markdown.bold(*content, sep='')` → str

Make bold text (Markdown)

Parameters

- `content` –

- `sep` –

Returns

`aiogram.utils.markdown.hbold(*content, sep='')` → str

Make bold text (HTML)

Parameters

- `content` –

- `sep` –

Returns

`aiogram.utils.markdown.italic(*content, sep='')` → str

Make italic text (Markdown)

Parameters

- `content` –

- `sep` –

Returns

`aiogram.utils.markdown.hitalic(*content, sep='')` → str

Make italic text (HTML)

Parameters

- `content` –

- `sep` –

Returns

`aiogram.utils.markdown.code(*content, sep='')` → str

Make mono-width text (Markdown)

Parameters

- `content` –

- `sep` –

Returns

`aiogram.utils.markdown.hcode(*content, sep='')` → str

Make mono-width text (HTML)

Parameters

- `content` –

- `sep` –

Returns

`aiogram.utils.markdown.pre(*content, sep='\n')` → str

Make mono-width text block (Markdown)

Parameters

- `content` –

- `sep` –

Returns

`aiogram.utils.markdown.hpre(*content, sep='\n') → str`
Make mono-width text block (HTML)

Parameters

- `content` –
- `sep` –

Returns

`aiogram.utils.markdown.underline(*content, sep='') → str`
Make underlined text (Markdown)

Parameters

- `content` –
- `sep` –

Returns

`aiogram.utils.markdown.hunderline(*content, sep='') → str`
Make underlined text (HTML)

Parameters

- `content` –
- `sep` –

Returns

`aiogram.utils.markdown.strikethrough(*content, sep='') → str`
Make strikethrough text (Markdown)

Parameters

- `content` –
- `sep` –

Returns

`aiogram.utils.markdown.hstrikethrough(*content, sep='') → str`
Make strikethrough text (HTML)

Parameters

- `content` –
- `sep` –

Returns

`aiogram.utils.markdown.link(title: str, url: str) → str`
Format URL (Markdown)

Parameters

- `title` –
- `url` –

Returns

`aiogram.utils.markdown.hlink(title: str, url: str) → str`
Format URL (HTML)

Parameters

- `title` –
- `url` –

Returns

aiogram.utils.markdown.**hide_link** (*url: str*) → str
 Hide URL (HTML only) Can be used for adding an image to a text message
Parameters *url* –
Returns

4.6.5 Helper

Example:

```
>>> from aiogram.utils.helper import Helper, ListItem, HelperMode, Item
>>> class MyHelper(Helper):
...     mode = HelperMode.lowerCamelCase
...     FOO_ITEM = ListItem()
...     BAR_ITEM = ListItem()
...     BAZ_ITEM = ListItem()
...     LOREM = Item()
...
>>> print(MyHelper.FOO_ITEM & MyHelper.BAR_ITEM)
<<< ['fooItem', 'barItem']
>>> print(MyHelper.all())
<<< ['barItem', 'bazItem', 'fooItem', 'lorem']
```

class aiogram.utils.helper.**Item** (*value=None*)
 Helper item

If a value is not provided, it will be automatically generated based on a variable's name

class aiogram.utils.helper.**ListItem** (*value=None*)
 This item is always a list

You can use &, | and + operators for that.

class aiogram.utils.helper.**ItemsList** (**seq*)
 Patch for default list

This class provides +, &, |, +=, &=, |= operators for extending the list

4.6.6 Deprecated

aiogram.utils.deprecated.**deprecated** (*reason, stacklevel=2*) → Callable

This is a decorator which can be used to mark functions as deprecated. It will result in a warning being emitted when the function is used.

Source: <https://stackoverflow.com/questions/2536307/decorators-in-the-python-standard-lib-deprecated-specifically>

aiogram.utils.deprecated.**renamed_argument** (*old_name: str, new_name: str, until_version: str, stacklevel: int = 3*)

A meta-decorator to mark an argument as deprecated.

```
@renamed_argument("chat", "chat_id", "3.0") # stacklevel=3 by default
@renamed_argument("user", "user_id", "3.0", stacklevel=4)
def some_function(user_id, chat_id=None):
    print(f"user_id={user_id}, chat_id={chat_id}")

some_function(user=123) # prints 'user_id=123, chat_id=None' with warning
some_function(123) # prints 'user_id=123, chat_id=None' without warning
some_function(user_id=123) # prints 'user_id=123, chat_id=None' without warning
```

Parameters

- **old_name** –
- **new_name** –
- **until_version** – the version in which the argument is scheduled to be removed
- **stacklevel** – leave it to default if it's the first decorator used.

Increment with any new decorator used. :return: decorator

4.6.7 Payload

`aiogram.utils.payload.generate_payload(exclude=None, **kwargs)`

Generate payload

Usage: `payload = generate_payload(**locals(), exclude=['foo'])`

Parameters

- **exclude** –
- **kwargs** –

Returns dict

`aiogram.utils.payload.prepare_arg(value)`

Stringify dicts/lists and convert datetime/timedelta to unix-time

Parameters **value** –

Returns

4.6.8 Parts

`aiogram.utils.parts.split_text(text: str, length: int = 4096) → List[str]`

Split long text

Parameters

- **text** –
- **length** –

Returns list of parts

Return type `typing.List[str]`

`aiogram.utils.parts.safe_split_text(text: str, length: int = 4096) → List[str]`

Split long text

Parameters

- **text** –
- **length** –

Returns

`aiogram.utils.parts.paginate(data: Iterable, page: int = 0, limit: int = 10) → Iterable`

Slice data over pages

Parameters

- **data** (`typing.Iterable`) – any iterable object
- **page** (`int`) – number of page
- **limit** (`int`) – items per page

Returns sliced object

Return type typing.Iterable

4.6.9 JSON

4.6.10 Emoji

4.7 Examples

4.7.1 Echo bot

Very simple example of the bot which will sent text of the received messages to the sender

Listing 1: echo_bot.py

```

1  """
2  This is a echo bot.
3  It echoes any incoming text messages.
4  """
5
6  import logging
7
8  from aiogram import Bot, Dispatcher, executor, types
9
10 API_TOKEN = 'BOT TOKEN HERE'
11
12 # Configure logging
13 logging.basicConfig(level=logging.INFO)
14
15 # Initialize bot and dispatcher
16 bot = Bot(token=API_TOKEN)
17 dp = Dispatcher(bot)
18
19
20 @dp.message_handler(commands=['start', 'help'])
21 async def send_welcome(message: types.Message):
22     """
23     This handler will be called when user sends `/start` or `/help` command
24     """
25     await message.reply("Hi!\nI'm EchoBot!\nPowered by aiogram.")
26
27
28 @dp.message_handler(regex='(^cat[s]?${puss}'))
29 async def cats(message: types.Message):
30     with open('data/cats.jpg', 'rb') as photo:
31         '''
32         # Old fashioned way:
33         await bot.send_photo(
34             message.chat.id,
35             photo,
36             caption='Cats are here ',
37             reply_to_message_id=message.message_id,
38         )
39         '''
40
41     await message.reply_photo(photo, caption='Cats are here ')

```

(continues on next page)

```

42
43
44 @dp.message_handler()
45 async def echo(message: types.Message):
46     # old style:
47     # await bot.send_message(message.chat.id, message.text)
48
49     await message.answer(message.text)
50
51
52 if __name__ == '__main__':
53     executor.start_polling(dp, skip_updates=True)

```

4.7.2 Inline bot

Listing 2: inline_bot.py

```

1  import hashlib
2  import logging
3
4  from aiogram import Bot, Dispatcher, executor
5  from aiogram.types import InlineQuery, \
6      InputTextMessageContent, InlineQueryResultArticle
7
8  API_TOKEN = 'BOT_TOKEN_HERE'
9
10 logging.basicConfig(level=logging.DEBUG)
11
12 bot = Bot(token=API_TOKEN)
13 dp = Dispatcher(bot)
14
15
16 @dp.inline_handler()
17 async def inline_echo(inline_query: InlineQuery):
18     # id affects both preview and content,
19     # so it has to be unique for each result
20     # (Unique identifier for this result, 1-64 Bytes)
21     # you can set your unique id's
22     # but for example i'll generate it based on text because I know, that
23     # only text will be passed in this example
24     text = inline_query.query or 'echo'
25     input_content = InputTextMessageContent(text)
26     result_id: str = hashlib.md5(text.encode()).hexdigest()
27     item = InlineQueryResultArticle(
28         id=result_id,
29         title=f'Result {text!r}',
30         input_message_content=input_content,
31     )
32     # don't forget to set cache_time=1 for testing (default is 300s or 5m)
33     await bot.answer_inline_query(inline_query.id, results=[item], cache_time=1)
34
35
36 if __name__ == '__main__':
37     executor.start_polling(dp, skip_updates=True)

```

4.7.3 Advanced executor example

`!/usr/bin/env python3` **This example is outdated** In this example used ArgumentParser for configuring Your bot. Provided to start bot with webhook: `python advanced_executor_example.py --token TOKEN_HERE --host 0.0.0.0 --port 8084 --host-name example.com --webhook-port 443` Or long polling: `python advanced_executor_example.py --token TOKEN_HERE` So... In this example found small trouble: can't get bot instance in handlers. If you want to automatic change getting updates method use executor utils (from aiogram.utils.executor)

TODO: Move token to environment variables.

Listing 3: advanced_executor_example.py

```

1  import argparse
2  import logging
3  import ssl
4  import sys
5
6  from aiogram import Bot
7  from aiogram.dispatcher import Dispatcher
8  from aiogram.dispatcher.webhook import *

126
127
128 if __name__ == '__main__':
129     executor.start_polling(dp, skip_updates=True)

```

4.7.6 Throttling example

Example for throttling manager. You can use that for flood controlling.

4.7.7 I18n example

Internalize your bot Step 1: extract texts # pybabel extract i18n_example.py -o locales/mybot.pot Step 2: create *.po files. For e.g. create en, ru, uk locales. # echo {en,ru,uk} | xargs -n1 pybabel init -i locales/mybot.pot -d locales -D mybot -l Step 3: translate texts Step 4: compile translations # pybabel compile -d locales -D mybot Step 5: When you change the code of your bot you need to update po & mo files. Step 5.1: regenerate pot file: command from step 1 Step 5.2: update po files # pybabel update -d locales -D mybot -i locales/mybot.pot Step 5.3: update your translations Step 5.4: compile mo files command from step 4

Listing 6: i18n_example.py

```

1 Step 4: compile translations
2     # pybabel compile -d locales -D mybot
3
4 Step 5: When you change the code of your bot you need to update po & mo files.
5     Step 5.1: regenerate pot file:
6         command from step 1
7     Step 5.2: update po files
8         # pybabel update -d locales -D mybot -i locales/mybot.pot
9     Step 5.3: update your translations
10    Step 5.4: compile mo files
11        command from step 4
